Introduction

44.

DEAR MR. SECRETARY:

For the first time since assuming this office six years ago, it is possible for me to report that the security of the United States of America is entirely in our own hands. Since my last formal report to you on the state of the Army, our forces in Europe, air and ground, have contributed mightily to the complete destruction of the Axis enemy. In the Pacific, Japan has been compelled to sue for an end to the war which she treacherously started. For two years the victorious advance of the United States sea, air and land forces, together with those of our allies was virtually unchecked. They controlled the skies and the seas and no army could successfully oppose them. Behind these forces was the output of American farms and factories, exceeding any similar effort of man, so that the peoples everywhere with whom we were joined in the fight for decency and justice were able to reinforce their efforts through the aid of American ships, munitions and supplies.

Never was the strength of the American democracy so evident nor has it ever been so clearly within our power to give definite guidance for our course into the future of the human race. And never, it seems to me, has it been so imperative that we give thorough and practical consideration to the development of a means to provide a reasonable guarantee for future generations against the horrors and colossal waste of war as well as security for that freedom we recently left to the hazard of mere hope or chance.

The Nation is just emerging from one of its gravest crises. This generation of Americans can still remember the black days of 1942 when the Japanese conquered all of Malaysia, occupied Burma, and threatened India while the German armies approached the Volga and the Suez. In those hours Germany and Japan came so close to complete domination of the world that we do not yet realize how thin the thread of Allied survival had been stretched.

In good conscience this Nation can take little credit for its part in staving off disaster in those critical days. It is certain that the refusal of the British and Russian peoples to accept what appeared to be inevitable defeat was the great factor in the salvage of our civilization. Of almost equal importance was the failure of the enemy to make the most of the situation. In order to establish for the historical record where and how Germany and Japan failed I asked General Eisenhower to have his intelligence officers promptly interrogate the ranking

members of the German High Command who are now our prisoners of war. The results of these interviews are of remarkable interest. They give a picture of dissension among the enemy nations and lack of long-range planning that may well have been decisive factors of this world struggle at its most critical moments.

As evaluated by the War Department General Staff, the interrogations of the captured German commanders disclose the following:

The available evidence shows that Hitler's original intent was to create, by absorption of Germanic peoples in the areas contiguous to Germany and by the strengthening of her new frontiers, a greater Reich which would dominate Europe. To this end Hitler pursued a policy of opportunism which achieved the occupation of the Rhineland, Austria, and Czechoslovakia without military opposition.

No evidence has yet been found that the German High Command had any over-all strategic plan. Although the High Command approved Hitler's policies in principle, his impetuous strategy outran German military capabilities and ultimately led to Germany's defeat. The history of the German High Command from 1938 on is one of constant conflict of personalities in which military judgment was increasingly subordinated to Hitler's personal dictates. The first clash occurred in 1938 and resulted in the removal of von Blomberg, von Fritsch, and Beck and of the last effective conservative influence on German foreign policy.

The campaigns in Poland, Norway, France, and the Low Countries developed serious diversions between Hitler and the General Staff as to the details of execution of strategic plans. In each case the General Staff favored the orthodox offensive, Hitler an unorthodox attack with objectives deep in enemy territory. In each case Hitler's views prevailed and the astounding success of each succeeding campaign raised Hitler's military prestige to the point where his opinions were no longer challenged. His military self-confidence became unassailable after the victory in France, and he began to disparage substantially the ideas of his generals even in the presence of junior officers. Thus no General Staff objection was expressed when Hitler made the fatal decision to invade Soviet Russia.

When Italy entered the war Mussolini's strategic aims contemplated the expansion of his empire under the cloak of German military success. Field Marshal Keitel reveals that Italy's declaration of war was contrary to her agreement with Germany. Both Keitel and Jodl agree that it was undesired. From the very beginning Italy was a burden on the German war potential. Dependent upon Germany and German-occupied territories for oil and coal Italy was a constant source of economic attrition. Mussolini's unilateral action in attacking Greece and Egypt forced the Germans into the Balkan and African campaigns, resulting in over-extension of the German armies which subsequently became one of the principal factors in Germany's defeat.

Nor is there evidence of close strategic coordination between Germany and Japan. The German General Staff recognized

that Japan was bound by the neutrality pact with Russia but hoped that the Japanese would tie down strong British and American land, sea, and air forces in the Far East.

In the absence of any evidence so far to the contrary, it is believed that Japan also acted unilaterally and not in accordance with a unified strategic plan.

Here were three criminal nations eager for loot and seeking greedily to advance their own self-interest by war, yet unable to agree on a strategic over-all plan for accomplishing a common objective.

The steps in the German defeat, as described by captured members of the High Command, were:

1. *Failure to invade England.* Hitler's first military set-back occurred when, after the collapse of France, England did not capitulate. According to Colonel General Jodl, Chief of the Operations Staff of the German High Command, the campaign in France had been undertaken because it was estimated that with the fall of France, England would not continue to fight. The unexpectedly swift victory over France and Great Britain's continuation of the war found the General Staff unprepared for an invasion of England. Although the armistice with France was concluded on 22 June 1940, no orders to prepare for the invasion of Britain were issued prior to 2 July. Field Marshal Kesselring stated that he urged the invasion since it generally was believed in Germany that England was in a critical condition. Field Marshal Keitel, Chief of Staff of German Armed Forces, however, stated that the risk was thought to be the existence of the British fleet. He said the army was ready but the air force was limited by weather, the navy very dubious. Meanwhile, in the air blitz over England the German Air Force had suffered irreparable losses from which its bombardment arm never recovered.

2. *The Campaign of 1941 in the Soviet Union.* In the Autumn of 1941 after the battle of Vysma, the Germans stood exhausted but apparently victorious before Moscow. According to Jodl, the General Staff of the armed forces considered that one last energetic push would be sufficient to finish the Soviets. The German High Command had neither envisioned nor planned for a winter campaign. A sudden change in the weather brought disaster. The Red Army defense, a terrific snow storm, and extremely unseasonable cold in the Christmas week of 1941 precipitated the strategic defeat of the German armed forces. Impatient of all restraint, Hitler publicly announced that he had more faith in his own intuition than in the judgment of his

military advisors. He relieved the commander in chief of the army, General von Brauschitsch. It was the turning point of the war.

3. *Stalingrad.* Even after the reverse before Moscow in 1941, Germany might have avoided defeat had it not been for the campaign in 1942 which culminated in the disaster at Stalingrad. Disregarding the military lessons of history, Hitler, instead of attacking the Soviet armies massed in the north, personally planned and directed a campaign of which the immediate objectives were to deprive the Soviet Union of her vital industries and raw materials by cutting the Volga at Stalingrad and seizing the Caucasian oil fields. Beyond these concrete objectives was evidently the Napoleonic dream of a conquest of the Middle East and India by a gigantic double envelopment with one pincer descending from the Caucasus through Tiflis and the other from North Africa across Egypt, Palestine, and the Arabian desert. The campaign collapsed before Stalingrad with the magnificent Russian defense of that city and in the northern foothills of the Caucasus, where a break-down of German transport to the front left the German armor stalled for 3 weeks for lack of fuel in the critical summer months of 1942. Field Marshal Keitel in reviewing this campaign remarks that Germany failed completely to estimate properly the reserve of Russian industrial and productive power east of the Urals. The statement of both Keitel and Jodl is that neither was in favor of the Stalingrad campaign, but that the recommendations of the High Command were overruled by Adolf Hitler.

4. *Invasion of North Africa.* Allied landings in North Africa came as a surprise to the German High Command. Field Marshal Kesselring, who, at the time, was commanding all German forces in the Mediterranean except Rommel's desert task force, states that his headquarters did expect a landing and had requested reinforcement by a division. However, Kesselring's fears were not heeded by Hitler and Goering. Allied security and deception measures for the landing operations were found to have been highly effective. Only when the Allied fleets and convoys were streaming through the Straits of Gibraltar did the Germans realize that something very special was under way, and even then false conclusions were drawn: either that the Allies intended to land in rear of Rommel in the Middle East, or that these were British reinforcements en route to the Far East, or supplies for starving Malta. Since no advance preparations had been made by the Germans to repel such an Allied invasion of North Africa,

all subsequent efforts to counter the Allies suffered from hasty improvisation. Defense continued, however, because, as Field Marshal Keitel now states, since evacuation was impossible, the Germans had only the choice of resisting or surrendering.

5. *The Invasion of France.* All German headquarters expected the Allied invasion of France. According to Colonel General Jodl, both the general direction and the strength of the initial assault in Normandy were correctly estimated; but Field Marshal Keitel states that the Germans were not sure exactly where the Allies would strike and considered Brittany as more probable because of the three major U-boat bases located in that region. Both agree that the belief of the German High Command that a second assault would be launched, probably by an Army under General Patton, held large German forces in the Pas de Calais area. Both Keitel and Jodl believed that the invasion could be repulsed or at worst contained, and both named the Allied air arm as the decisive factor in the German failure.

Prior to the invasion, important divergencies of opinion developed between Field Marshal von Rundstedt, Commander in Chief West, and Rommel, commander of the threatened Army Group. Rundstedt desired to hold his armored forces in a group around Paris and in Eastern France; Rommel to push them forward to positions in readiness close to the coast. The Rommel view prevailed. Von Rundstedt was subsequently relieved by Colonel General Von Kluge.

Soon after the Allied capture of Cherbourg, disension again broke out in the High Command. Von Kluge and Rommel wished to evacuate all Southwestern France, blocking or destroying its usable ports. They believed that a continuation of the fight in Normandy could only end with the destruction of their Western Armies and that they should withdraw before disintegration began. Von Kluge recommended defense on the general line: lower Seine-Paris-Fontainebleau-Massif Central. Hitler refused to accept this recommendation, relieved Kluge from command, and reappointed von Rundstedt as Commander in Chief West. Under direct instructions, Rundstedt continued the battle of Normandy to its final denouement. Hitler himself ordered the Avranches-Mortain counterattack and was much surprised when it completely failed. Keitel expresses further surprise at the audacious exploitation of the American break-through at Avranches during this counterattack, and particularly of the thrust towards Brest.

6. *The Ardennes Counterattack.* The German offensive in December 1944 was Hitler's personal conception. According to Jodl, the objective of the attack was Antwerp. It was hoped that overcast weather would neutralize Allied air superiority, and that an exceptionally rapid initial break-through could be achieved. Other German officers believe that this operation was reckless in the extreme, in that it irreparably damaged the comparatively fresh armored divisions of the Sixth Panzer Army, the principal element of Germany's strategic reserve, at a moment when every available reserve was needed to repulse the expected Soviet attack in the East.

7. *The Crossing of the Rhine.* Even after the failure of the German counteroffensive in the Ardennes, the Germans believed that the Rhine line could be held. The loss of the Remagen bridge, however, exploded this hope. The entire Rhine defensive line had to be weakened in the attempt to contain the bridgehead, and the disorderly German retreat in the Saar and Palatinate rendered easy the subsequent drive eastward of the Allied Armies towards Hamburg, Leipzig, and Munich.

Not only were the European partners of the Axis unable to coordinate their plans and resources and agree within their own nations how best to proceed, but the eastern partner, Japan, was working in even greater discord. The Axis, as a matter of fact, existed on paper only. Eager to capitalize on the preoccupation of the western powers in Europe, Japan was so greedy for her own immediate conquests that she laid her strategy, not to help Germany defeat Russia and Great Britain, but to accumulate her own profit. Had the way been open Germany and Japan would have undoubtedly joined their armies in Central Asia, but to Japan this objective was secondary to looting the Far East while there was no real force to stop her. The War Department General Staff's analysis of Japanese objectives follows:

The Japanese, for many years, bolstered by a fanatical belief in divine guidance and their own spiritual and military supremacy, had planned the domination of the Far East and eventually the world. Japan in her inland empire was not self-sufficient. She required broader land areas and access to oil, rubber, and other raw materials if she were to become a major industrial world power. This principle of expansion was outlined in the "Tanaka Memorial" purportedly a secret memorandum prepared for Hirohito by the Jap Premier in 1927. Authentic or not, it provided the pattern which Japan has followed, culminating in the great Pacific conflict.

Strategically, Japan was well poised in 1941 to carry out her aims in Asia. All the major world powers who normally

maintained the status quo in Asia were absorbed in the war in Europe. France had been overrun and eliminated. England was threatened by German invasion. The U. S. S. R. was attempting to repel a German invasion on her Western front reaching to the gates of the capital. The United States had become the Arsenal of Democracy, with major efforts directed toward the support and preservation of our European Allies.

The Tripartite Pact had been signed, giving Japan a free hand in Asia. She had a large and relatively well-equipped army and a moderately good air force well trained by actual combat in China. She had obtained by forced agreement a staging area in French Indo-China. She had a fairly large navy especially strong in the transport craft available. She had accumulated by great national economy a good stockpile of strategic matériels at home for the initial effort and with each successive conquest she obtained new and important areas from which other supplies of materials could be drawn, such as oil, rubber, and metal. The Japanese mistakenly believed in the hearty cooperation of "liberated" peoples of the so-called Greater East Asia Co-Prosperity Sphere with their huge labor pools. Japan considered herself ready to strike.

Japan's objective was the conquest, consolidation, and eventual domination of the whole Far East. She intended to make her conquest in a rapid surprise drive which would overpower all resistance, to form an iron ring of outer defenses against which the spiritually inferior, pacifistic combination of opponents could beat themselves into weariness, while she consolidated her gains at leisure.

The best estimate of Japan's plan for the accomplishment of her objectives appears to be the following:

1. Neutralize or destroy the U. S. Pacific Fleet by an attack on Pearl Harbor.
2. Drive rapidly south overcoming the Philippines and the Southwest and South Pacific Islands in order to cut sea routes of supply or attack from the East and gain the vast natural resources of the East Indies.
3. Cut China's supply line from the west by an invasion of Burma.
4. Form a flank by the seizure of the naval base of Singapore and the islands of Sumatra and Java.
5. Isolate or possibly invade Australia.
6. Invade the Hawaiian Islands via Midway.
7. Invade the Aleutian Islands to form a northern flank, dependent on initial successes and retained momentum.
8. Bring the American Northwest under aerial bombardment, raid our West Coast aviation industries, and then seize critical areas.
9. Stimulate unrest to eventual revolution in India.

The Japanese strategic plan initially failed when she missed the opportunity of landing troops on Hawaii, capturing Oahu and the important bases there, and

denying us a necessary focal point from which to launch operations in the Western Pacific.

There can be no doubt that the greed and the mistakes of the war-making nations as well as the heroic stands of the British and Soviet peoples saved the United States a war on her own soil. The crisis had come and passed at Stalingrad and El Alamein before this Nation was able to gather sufficient resources to participate in the fight in a determining manner. Had the U. S. S. R. and the British Army of the Nile been defeated in 1942, as they well might if the Germans, Japanese, and Italians had better coordinated their plans and resources and successive operations, we should have stood today in the western hemisphere confronted by enemies who controlled a greater part of the world.

Our close approach to that terrifying situation should have a sobering influence on Americans for generations to come. Yet, this is only a prelude of what can be expected so long as there are nations on earth capable of waging total war.

On 6 August the entire world learned from President Truman's announcement that man had entered into a new era—that atomic power had been harnessed.

This discovery of American scientists can be man's greatest benefit. And it can destroy him. It is against the latter terrible possibility that this nation must prepare or perish. Atomic power will affect the peaceful life of every individual on earth. And it will at the same time affect every instrument and technique of destruction. But the atomic bomb is not alone among the scientific advances that make the possibilities of the future so terrifying. The development of aircraft and rockets and electronics has become equally incredible. In order to prevent any possible misconception of the terrible potentialities of the future, I asked the Commanding General of the Army Air Forces to prepare an estimate of the capabilities of other modern weapons. His report is confined to the certainties but, as is obvious from the atomic bomb, the developments of the war have been so incredible that wildest imagination will not project us far from the target in estimating the future. Much of the information has until now properly been classified highly secret in our development research laboratories, at our testing establishments, or in the combat units. However, it is now so important that the people of the United States realize the possibilities of the future, that I here quote from General Arnold's report:

At the start of this war we had bombers capable of 200 miles per hour with a combat radius of 900 miles, effective operational ceilings of 24,000 feet, and bomb load capacity of 6,000 pounds. Today our development of this type aircraft has given us bombers capable of carrying 20,000 pounds of bombs to targets 1,600 miles away at speeds of 350 miles an hour and altitudes of over 35,000 feet. Radar has improved our bombing technique so that we can now attack a target effectively even though it be obscured by weather or darkness. We will produce within the next few years jet-propelled bombers capable of flying 500 to 600 miles an hour to targets 1,500 miles away at altitudes of over 40,000 feet. Development of even greater bombers capable of operating at stratospheric altitudes and speeds faster than sound and carrying bomb loads of more than 100,000 pounds already is a certainty. These aircraft will have sufficient range to attack any spot on the earth and return to a friendly base.

In 1941 our propeller-driven fighters were limited to speeds of 300 miles an hour, a range 200 to 300 miles, and effective ceilings of 20,000 feet. Today our conventional fighters have speeds of 500 miles an hour, combat ranges of 1,300 miles, and effective ceilings of 35,000 feet. Improvement of our jet fighters may well produce within the next five years an aircraft capable of the speed of sound and of reaching targets 2,000 miles away at altitudes of above 50,000 feet. When the barrier of compressibility has been hurdled, as it surely will be, there is no practicable limit to the speed of piloted aircraft.

At the onset of this war demolition bombs ranged in size from 20 to 2,000 pounds with a few light case 4,000 pound blast bombs. The explosive filling of these bombs was standard TNT. During the war, new bombs have been developed the entire range from small 4-pound antipersonnel missiles to 22,000 pound deep penetration city smashers. At this very moment we are making a single bomb weighing 45,000 pounds to keep pace with the bomber, already under construction, which will carry such a load. Air ordnance engineers have blueprinted a bomb weighing 100,000 pounds.

When World War II began we had no rockets. So far the most spectacular rocket of the war has been the V-2. This weapon has extended artillery range to 200 miles with little sacrifice in accuracy. Defense against such weapons requires piloted and pilotless aircraft capable of fantastic speeds, or powered missiles capable of finding, intercepting, and destroying the attacker in the air and at his launching sites or by methods and devices as yet undeveloped. We can direct rockets to targets by electronic devices and new instruments which guide them accurately to sources of heat, light, and magnetism. Drawn by their own fuses such new rockets will streak unerringly to the heart of big factories, attracted by the heat of the furnaces. They are so sensitive that in the space of a large room they aim themselves toward a man who enters, in reaction to the heat of his body.

All of these weapons and their possible combinations make the air approaches of a country the points of extreme danger. Many Americans do not yet understand the full implication of the formless rubble of Berlin and of the cities of Japan. With the continued development of weapons and techniques now known

to us, the cities of New York, Pittsburgh, Detroit, Chicago, or San Francisco may be subject to annihilation from other continents in a matter of hours.

The Navy, now the strongest in the world, will protect our shores against attack from any amphibious enemy who might challenge through the sea approaches, but we must also now be prepared to oppose stratospheric envelopment with the techniques and weapons discussed above. It is clear that the only defense against this kind of warfare is the ability to attack. We must secure our Nation by ourselves developing and maintaining these weapons, troops, and techniques required to warn aggressors and deter them from launching a modern devastating war against us.

With the realization of these facts will also come a highly dangerous and attractive doctrine. It will be said that to protect itself this nation need only rely on its machine power, that it will not need manpower.

This doctrine will be closely akin to the doctrine of negative defense which destroyed France. The folly of the Maginot line was proved early in the war but too late to save France. The folly of the new doctrine which has already begun to take shape in the thinking of many Americans would also be proved early—but probably too late to save America.

The only effective defense a nation can now maintain is the power of attack. And that power cannot be in machinery alone. There must be men to man the machines. And there must be men to come to close grips with the enemy and tear his operating bases and his productive establishment away from him before the war can end.

The classic proof of this came in the battle of Britain. Even with the magnificent fighter defense of the Royal Air Force, even with the incredible efficiency of the fire of thousands of antiaircraft guns, controlled and aimed by unerring electronic instruments, the British Islands remained under the fire of the German enemy until the final stages of the war.

Not until the American and British armies crossed the channel and seized control of the enemy's territory was the hail of rockets lifted from England. Not until we had physical possession of the launching sites and the factories that produced the V weapons did these attacks cease.

Such is the pattern of war in the 20th Century. If this nation is ever again at war, suffering, as Britain did in this war, the disastrous attacks of rocket-propelled weapons with explosive power like our own atomic bomb, it will bleed and suffer perhaps to the point of annihilation, unless we can move armies of men into

the enemy's bases of operations and seize the sites from which he launches his attacks.

There is no easy way to win wars when two opponents are even remotely well matched. There is no easy way to safeguard the nation or preserve the peace. In the immediate years ahead the United Nations will unquestionably devote their sincere energies to the effort to establish a lasting peace. To my mind there is now greater chance of success in this effort than ever before in history. Certainly the implications of atomic explosion will spur men of judgment as they have never before been pressed to seek a method whereby the peoples of earth can live in peace and justice.

However, these hopes are by no means certainties. If man does find the solution for world peace it will be the most revolutionary reversal of his record we have ever known. Our own responsibilities to these efforts are great. Our diplomacy must be wise and it must be strong. Nature tends to abhor weakness. The principle of the survival of the fit is generally recognized. If our diplomacy is not backed by a sound security policy, it is, in my opinion, forecast to failure. We have tried since the birth of our nation to promote our love of peace by a display of weakness. This course has failed us utterly, cost us millions of lives and billions of treasure. The reasons are quite understandable. The world does not seriously regard the desires of the weak. Weakness presents too great a temptation to the strong, particularly to the bully who schemes for wealth and power.

We must, if we are to realize the hopes we may now dare have for lasting peace, enforce our will for peace with strength. We must make it clear to the potential gangsters of the world that if they dare break our peace they will do so at their great peril.

This Nation's destiny clearly lies in a sound permanent security policy. In the War Department's proposals there are two essentials: (1) Intense scientific research and development; (2) a permanent peacetime citizen army. I will discuss these essentials in detail later in this report. The importance of scientific research is the most obvious to the civilian, but the importance of a peacetime citizen army based on universal military training is of greater importance, in my opinion.

Nothing will contribute more to an understanding of the needs of future security than a clear understanding of what has occurred in this war, the strategic decisions, the reasons for them, and the operations by which they were executed. The press and radio have given the American people a thorough day-by-day account of the progress of the war within the limitations of necessary security; never before have the details of military campaigns been so quickly, so accurately, and so completely reported. Yet because of the very bulk of the information plus the blank spots of essential secrecy it has been difficult for the public to place the developments in their proper perspective. It now becomes possible to examine them in retrospect with an emphasis more nearly approaching that which history is likely to give them.

VICTORY IN EUROPE

VICTORY IN EUROPE

The Strategic Concept

The period covered by my first two Biennial Reports was a time of great danger for the United States. The element on which the security of this nation most depended was time—time to organize our tremendous resources and time to deploy them overseas in a world-wide war. We were given this time through the heroic refusal of the Soviet and British peoples to collapse under the smashing blows of the Axis forces. They bought this time for us with the currency of blood and courage. Two years ago our margin of safety was still precarious but the moment was rapidly approaching when we would be prepared to deal with our enemies on the only terms they understood—overwhelming power.

In no other period of American history have the colors of the United States been carried victoriously on so many battlefields. It is with profound satisfaction and great pride in the troops and their leaders that this report is submitted on the campaigns which crushed Italy, Germany and Japan.

It is necessary to an understanding of the Army's participation in these campaigns that reference be made to the decisions which launched them. The forces of the United States and Great Britain were deployed under a single strategic control exercised by the group known as the Combined Chiefs of Staff. As described in a previous report, this structure of Allied control was conceived at the conference of December 1941, when Prime Minister Churchill, accompanied by the chiefs of the British Navy, Army, and Air Forces, came to Washington and met with the President and the American Chiefs of Staff. It was the most complete unification of military effort ever achieved by two Allied nations. Strategic direction of all the forces of both nations, the allocation of manpower and munitions, the coordination of communications, the control of military intelligence, and the administration of captured areas all were accepted as joint responsibilities.

The President and the Prime Minister, with the advice of the Combined Chiefs of Staff, made the decision at this first conference that our resources would be con-

centrated first to defeat Germany, the greater and closer enemy, and then Japan.

In April 1942, President Roosevelt directed me to proceed to London, accompanied by Mr. Harry Hopkins, for a conference with the Prime Minister, the War Cabinet, and the British Chiefs of Staff, regarding the tentative plan for the invasion of the continent in a cross-Channel operation. There a general agreement was reached that the final blow must be delivered across the English Channel and eastward through the plains of western Europe. At that time the Red Army was slowly falling back under the full fury of the German assault, and it was accepted at the London Conference that everything practicable must be done to reduce the pressure on the Soviet lest she collapse and the door be opened wide for a complete conquest of Europe and a probable juncture with the Japanese in the Indian Ocean.

In the discussions at this conference, a tentative target date for the cross-Channel operations, designated by the code name ROUNDUP, was set for the summer of 1943. However, the immediate necessity for an emergency plan was recognized. It was given the code name SLEDGEHAMMER and was to provide for a diversionary assault on the French coast at a much earlier date if such a desperate measure became necessary to lend a hand toward saving the situation on the Soviet front.

Here the Western Allies faced a shortage which was to plague us to the final day of the war in Europe—the shortage of assault craft, LST's, LCI's, and smaller vessels. At least six divisions would be required for a diversionary action in order to be of any assistance to the Red Army, and all the resources of England and the United States were searched for vessels or barges that could be employed in the Channel. Outboard motors and marine engines in pleasure craft in the United States were appropriated for this purpose. An extensive building program for landing craft was agreed upon, which necessitated a heavy cut-back or delay in the construction then underway of certain major combat ships for the Pacific Fleet. Also there were added to the production program in the United

States a great many items which would be required for build-up—engineering and railroad equipment and rolling stock, pipelines, hospital set-ups, communication matériel, and a multitude of items to be required for airfields, camps, docks, and depots in the British Isles for the actual Channel crossing and for the support of our troops once they were in France.

In June, the Prime Minister and General Sir Alan F. Brooke, Chief of the Imperial General Staff, returned to Washington for a further discussion of SLEDGEHAMMER and ROUNDUP, and a possible operation in the Mediterranean. During these discussions, the Allied situation in North Africa took a more serious turn, culminating in the loss of Tobruk. The discussions thereafter were devoted almost exclusively to the measures to be taken to meet the threat facing Cairo, Rommel's forces having been checked with difficulty on the El Alamein line. Further advances by his Afrika Korps, with its Italian reinforcements, and German successes along the southeastern portion of the Soviet front threatened a complete collapse in the Middle East, the loss of the Suez Canal and the vital oil supply in the vicinity of Abadan. It was a very black hour.

In July, Admiral King and I went to London for further meetings with the British Chiefs of Staff, to determine if there were not something that could be done immediately to lessen the pressure on the Soviet, whose armies were facing a crisis. Poverty of equipment, especially in landing craft, and the short period remaining when the weather would permit cross-Channel movement of small craft, ruled out the diversionary operation SLEDGEHAMMER for 1942.

After prolonged discussions, it became evident that the only operation that could be undertaken with a fair prospect of success that year was TORCH, the assault on North Africa. Landings there would be a long way from Germany, but should serve to divert at least some German pressure from the Red Army, and would materially improve the critical situation in the Middle East. It was therefore decided, with the approval of the President and the Prime Minister, to mount the North African assault at the earliest possible moment, accepting the fact that this would mean not only the abandonment of the possibility for any operation in Western Europe that year, but that the necessary build-up for the cross-Channel assault could not be completed in 1943. TORCH would

bleed most of our resources in the Atlantic, and would confine us in the Pacific to the holding of the Hawaii-Midway line and the preservation of communications to Australia.

General Eisenhower, who was then established with his headquarters in London, directing the planning and assembling of American resources, was, with the generous acceptance of the British Government, appointed Commander in Chief of the British and American Forces which were to carry out the landings in North Africa. On 13 August he received the formal directive to proceed with the operation. The target date was fixed for early November.

We have since learned that the German plan at that time was to attempt the defeat of Britain by aerial bombardment and by destruction of her army and resources in the Middle East. Colonel General Jodl, Chief of the German Armed Forces Operations Staff, has disclosed that it was Hitler's plan to break through Stalingrad and Egypt, and join these two salients in the Middle East.

The heroic defense of Stalingrad and General Montgomery's crushing defeat of Rommel at El Alamein dislocated these gigantic pincers. The further development of the operations in North Africa from the east and the west, and the Soviet offensive from the Volga proved to be the turning points at which the Axis was forced on the strategic defensive.

In January 1943, the President and the Prime Minister, with the Combined Chiefs of Staff, met at Casablanca. It was then apparent that our North African operation was to be successful, even beyond original calculations. Tunisia was a lure into which the German command continued to pour great quantities of men and matériel, commitments that were certain to be disastrous for the enemy once the winter rains ceased and the low clouds over the Sicilian Strait cleared, in the face of overwhelming Allied superiority on the sea and in the air. At the conclusion of the North African campaign, enemy killed and captured numbered 349,206 Italian and German troops, and there had been captured or destroyed on land alone nearly 200,000 tons of enemy matériel.

The problem before the Chiefs of Staff at Casablanca was the next movement to be made following the completion of the Tunisian campaign. It still would have been preferable to close immediately with the German enemy in Western Europe or even in Southern France had that been possible of achieve-

ment with the resources then available to General Eisenhower. It was not.

Axis control of the Mediterranean islands and the entire reach of the southern coast of Europe from Franco's Spain to Turkey denied our communications also across the Mediterranean and forced our shipping into a 12,000-mile detour around the Cape of Good Hope. The United States was still involved in the process of a vast mobilization. The Chiefs of Staff therefore considered whether we had the strength to move directly to Italy or what might be the best intermediary steps. It was decided to assault Sicily (operation HUSKY) and, with the approval of the Heads of State, General Eisenhower was advised on 23 January:

The Combined Chiefs of Staff have resolved that an attack against Sicily will be launched in 1943 with the target date as the period of the favorable July moon.

Even though a full-scale Mediterranean campaign now was imminent, it was resolved at Casablanca to resume amassing in the United Kingdom as quickly as possible the forces necessary to invade Western Europe. This build-up was to be one of the most tremendous logistical undertakings in military history.

It required provision for the transportation, shelter, hospitalization, supply, training, and general welfare of 1,200,000 men who had to be embarked in the United States and transported across the submarine-infested Atlantic to the United Kingdom. The hospital plan alone, for example, called for 94,000 beds in existing installations, conversions, and new construction. The program was later increased by tent accommodations for 30,000 more beds. Living quarters had to be furnished for the assault forces and their supply troops. There had to be provision for 20,000,000 square feet of covering, storage, and shop space, and 44,000,000 square feet of open storage and hard standings. Parks for 50,000 military vehicles were planned; 270 miles of railroad had to be constructed. More than 20,000 railroad cars and 1,000 locomotives were to be shipped to the United Kingdom. The Air Forces required 163 fields, seven centers for combat crews and replacements, accommodations for 450,000 men, and 8,500,000 square feet of storage and shop space.

Two-thirds of the vast program of air installation required new construction by British and United States engineers. At the same time the invasion operations required detailed planning for the installations

we would have to build once ashore in France—hospitals, depots, shops, railroads, pipelines, and bridging materials. There was stored in the United Kingdom, for example, all the construction materials necessary to rehabilitate completely the port of Cherbourg, the destruction of which was inevitable.

By July 1943 the flow of matériel from the United States to Britain had reached 753,000 tons a month which later was to increase to 1,900,000 tons in the month preceding the attack. It was necessary to construct and to allocate from existing resources a total of 3,780 assault craft of various types and 142 cargo ships. A great many of the assault craft were ocean-going vessels.

Not unmindful that an invasion across the English Channel against an entrenched German Army was an operation unequaled in possibility for a major disaster, the Allied commanders decided to undertake the great strategic bombardment that was to weaken Germany militarily, industrially, and economically. It was clear from the start that this program would require the tremendous resources of both American and British manpower and that critical shipping required for the build-up of the ground forces in England would have to be diverted from this purpose. The strategic bombardment of Germany was to be the mightiest air assault ever conceived. It is now certain that the decision was a sound one.

Accordingly, at Casablanca the American and British air force commanders were directed to launch and increase steadily the intensity of an assault that would continue day by day, around the clock, to reduce the enemy's capacity to resist when our armies would come to grips with the German Army on the continent. In order of priority, targets for the long-range heavy bombers were submarine construction yards, the aircraft industries, transportation, oil plants, and other critical enemy war industries.

Before the assault of Sicily was actually undertaken, the President, the Prime Minister, and the Combined Chiefs of Staff met again in Washington in May. This meeting, designated the TRIDENT Conference, may prove to be one of the most historic military conclaves of this war, for here the specific strategy to which the movements of the land, sea, and air forces of the American and British Allies conformed was translated into firm commitments. There were changes in detail and technique after the TRIDENT Con-

ference, but the Pacific strategy was sustained, and the first great objective, the defeat of the European Axis, Germany and Italy, and their satellites, was accomplished.

It was at this Conference that the combined Chiefs of Staff decided to extend Allied influence in the Mediterranean to the point where Italy would be forced to withdraw from the war. They also approved the plan of the United States Army Air Forces to strike Germany a serious blow by reducing her great oil resources at Ploesti. The first effective attack was carried out on 1 August 1943 by a force of 178 B-24 heavy bombers. Our losses were heavy, 54 bombers, but the cost to Germany's ability to wage mechanized warfare was immense. The Axis had been obtaining 3,000,000 tons of oil a year from Rumania. The continuing Ploesti attacks materially dried up this source.

At the TRIDENT Conference plans for a direct assault from the United Kingdom into Europe's classic battlegrounds were reaffirmed. Even though we were now firmly entrenched in North Africa, to have attempted to force Germany from the south across the Alpine barrier was on the face of it impracticable. In Europe's innumerable wars no vigorously opposed crossing of the Alps had ever been successfully executed. Operation OVERLORD, the new code name for the assault of France, which replaced ROUNDUP, was formally accepted and, for the purposes of planning, the spring of 1944 was designated as the target date. General Eisenhower was directed to send to the United Kingdom beginning 1 November seven seasoned divisions which were fighting in North Africa, and which would fight in Sicily, even though this meant that at the very moment he would be committing his forces in a full-scale campaign in Italy, he would be obliged to release two Army Corps of seasoned troops.

Nor was Japan neglected at the TRIDENT Conference. It was decided to maintain an unremitting offensive pressure on the Japanese even while our forces closed in to deliver the knock-out blow to Italy and we were gathering the tremendous resources in the United Kingdom that would be necessary to force the continent. Japan would be approached both from the west and from the east. On the Asiatic mainland it was determined to build up the flow of matériel to China via the air route over the "hump" and to initiate aggressive land and air operations to reestablish surface communications with beleaguered China. In the Pacific, General MacArthur and Admiral Nimitz were directed to move against the Japanese outer defenses, ejecting the enemy from the Aleutians and seizing the Marshalls, some of the Carolines, the remainder of the Solomons, the Bismarck Archipelago, and the remainder of New Guinea.

From the TRIDENT Conference, the Prime Minister, Field Marshal Sir Alan Brooke and I proceeded to General Eisenhower's headquarters at Algiers for a series of conferences lasting from 29 May to 3 June. At TRIDENT final conclusions had not been reached as to the extent to which the Mediterranean advance should continue so that General Eisenhower might be left in a position to exploit every favorable opportunity. In his villa at Algiers we discussed the future in detail, and he was authorized to proceed from operation HUSKY in Sicily as he saw fit with the intent of eliminating Italy from the war. But it was our purpose to avoid the creation in Italy of a vacuum into which the resources of the cross-Channel operation would be dissipated as the Germans had bled themselves in the North African campaign.

FORTRESS OF EUROPE

Victorious in North Africa, the Allied armies now had to meet and defeat the German armies of the West. It was also hoped to drive Italy out of the war, but both objectives could not be accomplished in the same operation. Behind the Alpine barrier, Nazi Germany could well feel secure from our attack. Where General Eisenhower stood in the summer of 1943, he had only two possible routes to Germany—through Southern France where his maneuver would be sharply restricted in the Rhone Valley or through Salonika in Eastern Greece where the Wehrmacht would have had the advantage of meeting both the Western Allies and the Red Army on the same front. It was imperative that the main United States and British forces be concentrated in the British Isles in preparation for a landing in France and an advance across the plains of Western Europe.

The Fall of Italy

Formal reports from the theater commanders on all of the operations of the last two years have not yet been received in the War Department and this general account of the operations of the United States Army during that period is based on official messages, informal reports, and other pertinent documents which are now available. They are believed to be sufficiently complete for the purposes of this report. Throughout the war, the Army was one part of a team composed of the sea, air, and ground forces of the United States and Great Britain and other members of the United Nations. It is therefore necessary to a description of the participation of the United States Army units in the fighting that the operations of the entire team be outlined.

The amphibious assault of the island of Sicily was launched on 10 July 1943. For weeks airfields, rail lines, and enemy fortifications on the island and in Sardinia and on the Italian mainland had been reduced by aerial bombardment. Pantelleria had surrendered on 11 June after an intense air and naval attack. The small islands of Lampedusa and Linosa had fallen a few days later.

The attacking force—the Fifteenth Army Group—was under General Eisenhower's deputy commander for allied ground forces, Gen. Sir Harold R. L. G. Alexander. It consisted of the American Seventh Army, under Lt. Gen. George S. Patton, Jr., on the left and the British Eighth Army, under Lt. Gen. Sir Bernard L. Montgomery, on the right. The Seventh Army assault force was made up of the II Corps, commanded by Lt. Gen. Omar N. Bradley and a separate task force under Major General Lucian K. Truscott. The II Corps consisted principally of the 1st and 45th Divisions, and a paratroop force. The task force was made up of the 3d Division with a combat team of the 2d Armored Division. In the British Eighth Army were two corps, including four infantry divisions, two brigades, and an airborne division. These troops were embarked from Algeria, Tunisia, the Middle East, the United Kingdom, and the United States. The Naval Commander in Chief under General Eisenhower was Admiral of the Fleet Sir Andrew Cunningham. Vice Admiral Henry K. Hewitt was the senior U. S. Naval officer.

A wind which had sprung up the night preceding D-day attained near gale proportions as our convoys approached their rendezvous. The wind subsided somewhat before H-hour, but conditions continued quite unfavorable for landing. In compensation, the storm had put the beach defenders off their guard.

General Eisenhower wrote me 17 July:

... All the initial invasion moves were carried out smoothly, and an astonishing lack of resistance was encountered on the

shoreline. Captured Italian generals say we secured complete surprise. The airborne operations, which were executed about three hours ahead of the landing, were apparently the first real notice the defenders had of what was coming. Our parachutists and the British glider troops got fairly well into their positions in spite of very high winds and bad navigating conditions. The landings on the east coast were not greatly troubled by the weather, but the 45th and 1st Divisions had an extremely bad surf. Admiral Cunningham told me that he considered the United States Navy landing operations, under Admiral Kirk (with the 45th Division), to be one of the finest examples of seamanship he had ever witnessed

The wind also disrupted our airborne landings which were scheduled to be made inland from Gela a few hours before H-hour. Although scattered over a wide area and suffering heavy casualties from our own fire directed at transport formations which were off the prescribed course, the paratroops had a decisive effect on the successful landing.

General Eisenhower described these tragic difficulties as follows:

... The most difficult thing we have to solve is to work out methods whereby friendly aircraft can work over our troops and vessels with safety. Take for example one operation: We were quite anxious to assemble all the fighting elements of the 82d Division in the rear of Patton's line as a general reserve, since all the evidence showed that he might receive some rather serious counterattacks. Two nights after the original landing, we laid on a very carefully coordinated plan for bringing in the remainder of the 82d Division. Sea lanes were established with the Navy and all troops were carefully warned as to what to expect. In spite of this, the troop-carrying planes encountered some fire before they got over the shore and from then on we had a very unfortunate experience. Some German night bombers came in at the same moment that our troop-carrying planes did and the dropping of bombs and flares made all the ground troops open up a maximum fire. In addition to this, a local counterattack, which took place at too late an hour to warn the airborne troops, apparently allowed the enemy to establish a fire zone near the selected landing ground. The combination of all these things resulted in quite serious losses. My present reports are that we lost 23 planes, while personnel losses as yet are unestimated.

A later operation on the British front brought out the lesson that when we land airborne troops in hostile territory, we should *not do so in successive waves*, but should do it all at once. In the first wave, where we had surprise, losses were negligible, but in the two succeeding waves they were very large.

Even in the daytime we have great trouble in preventing our own naval and land forces from firing on friendly planes. This seems particularly odd in this operation, where we have such great air superiority that the presumption is that any plane flying in a straight and level course is friendly. Spaatz has written Arnold at considerable length on this subject, and he is convinced, as I am, that we are going to have to do some very earnest basic training in both ground and naval forces. Otherwise, we will finally get our air forces to the point where they will simply refuse to come over when we want them. Generally speaking, we are on the strategic offensive, which means we *must* have air superiority. Therefore, we should teach our people *not* to fire at a plane unless it definitely shows hostile intent . . .

By sunrise, three hours after the assault, beachheads had been established along 100 miles of coast, from just south of Syracuse to west of Licata. Our troops were moving inland, northeast of Gela, on D+1, when the Germans directed a heavy armored counterattack against the 1st Division. It was beaten off largely through expert use of artillery and naval gun fire. This action provided the most critical moment of the invasion.

The problems of supply over the beaches were especially acute during the first two days. The needs of the combat troops were urgent but adverse weather and occasional enemy air attacks made unloading of ships difficult and hazardous. The beach-supply operation first proved the excellence of our 2½-ton amphibious truck, the "DUKW," an official designation which quickly became popularized as "DUCK."

General Eisenhower advised me:

. . . Last Monday morning I made a quick tour along the American beaches, in order to get a visual picture of unloading operations and also to have a personal visit with Hewitt and Patton. I must say that the sight of hundreds of vessels, with landing craft everywhere, operating along the shoreline from Licata on the eastward, was unforgettable. Everybody I saw was in good heart and anxious to get ahead . . .

In the first two days of the invasion more than 80,000 men, 7,000 vehicles, and 300 tanks had been landed; several small ports had been placed in operation; at least six airfields had been captured and were being prepared for use.

Allied aircraft gave close support to ground operations, flying up to 1,200 sorties each day. Heavy

bombers knocked out the few airdromes remaining serviceable to the enemy, and the ground troops were advancing rapidly. All air operations were under the Mediterranean Allied Air Forces headed by Air Chief Marshal Sir Arthur Tedder with Lt. Gen. Carl Spaatz as Commander of the Northwest African Air Forces. All heavy bombers were organized into the Strategic Air Force under Maj. Gen. James H. Doolittle.

By 16 July the battle line ran from a point just south of Catania on the east to Porto Empedocle on the west; about one-quarter of the island was in our hands. On 22 July, General Patton's forces in a rapid thrust across the western end of the island occupied the key port of Palermo. Further east the troops forged steadily ahead through rugged mountains stubbornly defended by the enemy. By the end of July only the northeastern corner of the island remained to the enemy.

Catania, the east coast bastion which had held up the advance of the British Eighth Army, fell early in August. The Germans and Italians were already withdrawing across the Strait of Messina under heavy air bombardment and continued pressure by our ground forces. On 16 August patrols of our 3d Division entered Messina from the west simultaneously with British units from the southeast and the next day organized resistance ceased. In 39 days the Sicilian campaign had ended. Through use of a heavy concentration of anti-aircraft guns the Germans managed to extricate thousands of their first-line panzer and airborne troops as well as a considerable amount of light equipment over the Strait of Messina to the mainland. Nevertheless, for the Axis the loss of Sicily was a major military disaster. Their casualties totaled 167,000 of which 37,000 were Germans. Our casualties totaled 31,158 killed, wounded, and missing.

General Eisenhower reported:

. . . Nine months after the first landings in North Africa, the Allied Force had not merely cleared its shore of enemy forces, but had wrested from him the Sicilian bridge to use as our own in an advance onto the Italian mainland . . .

On to the Boot

Operation HUSKY, as we had hoped, precipitated a political disaster for the Axis. On 25 July, King Victor Emmanuel proclaimed the resignation of Mussolini. In August the President and the Prime Minister with the Combined Chiefs of Staff met at the Citadel at Quebec, the meeting being designated the QUADRANT Conference. By now the Italian Government

was ready to quit. Marshal Badoglio had established contact with General Eisenhower in an effort to negotiate a surrender without the knowledge of the Germans. General Eisenhower was instructed to accept the unconditional surrender of Italy and to obtain the greatest possible military advantage from this development. He was to seize Sardinia and Corsica and attempt the establishment of air bases in the Rome area and northward, if feasible, maintaining unrelenting pressure on German forces in Northern Italy. At the same time, he was directed to coordinate his plans with the requirements of operation OVERLORD.

The Combined Chiefs of Staff at the QUADRANT Conference also conceived the operation against Southern France designated operation ANVIL and arrived at these conclusions:

Offensive operations against Southern France (to include the use of trained and equipped French forces) should be undertaken to establish a lodgment in the Toulon-Marseille area and to exploit northward in order to create a diversion in connection with OVERLORD. Air nourished operations in the southern Alps will, if possible, be initiated . . .

On 8 September, the day before American troops landed on the Italian mainland, the unconditional surrender of Italy was announced. On 9 September and the succeeding days the principal elements of the Italian fleet surrendered.

Compelling reasons had developed for the invasion of the Italian mainland. The operation (AVALLANCHE) would enable us to capitalize on the collapse of Italian resistance; it offered a field for engaging German divisions which otherwise might operate against the Red Army and later against the forces in France; it would provide airfields from which the German homeland and the Balkans could be bombed from substantially shorter range; it would complete Allied control of the Mediterranean.

Canadian and British divisions of General Montgomery's Eighth Army crossed the Strait of Messina under cover of heavy artillery and air bombardment and landed on beaches near Reggio Calabria and Villa San Giovanni on 3 September. The beachheads were quickly secured, and the Eighth Army advanced northward through Calabria.

Six days later the U. S. Fifth Army under command of Lt. Gen. Mark W. Clark disembarked on beaches along the Gulf of Salerno. It landed with the VI Corps commanded by Maj. Gen. E. J. Dawley on the right and the British X Corps on the left. The VI Corps was

composed principally of the 36th and 45th Divisions. American Rangers and British Commando units landed on the Sorrento Peninsula, north of the port of Salerno.

The enemy had suspected that we might undertake an amphibious operation against the Naples area, and as a result enemy reaction to the Salerno landings was swift and vigorous. It was evident that the German High Command had decided that its only hope of salvaging the situation arising from the surrender of the Italian Government lay in holding the Allied forces south of Naples until fresh dispositions could be made. On D-day the Germans made several local tank attacks. By 13 September the German XIV Panzer Corps was in action, and both the American and the British Corps were under heavy attack. The situation was critical.

General Eisenhower and his ground force commander, General Alexander, fully anticipated that they were in for a heavy fight at the foot of the Italian boot. They had estimated that eight German divisions were available to oppose the landings. Two were in and north of Rome. The Hermann Goering Panzer Division and the 15th Motorized Division were in the Naples area, and four more first-class divisions (the 16th and 26th Panzer, 29th Motorized, and 1st Parachute) were south of Naples. The enemy forces in the south were heavy in armor. General Alexander, on the other hand, had to lodge assault infantry on the mainland first. The shortage of shipping made it impossible for him to bring his own heavy armor into the fight until the British 7th Armored Division started to unload on D+5. A further handicap was the necessity of making large forces available for the OVERLORD build-up at this time. The U. S. 1st and 9th Divisions and 2d Armored Division which had fought in Sicily were already staging for their movement to the United Kingdom. Later the 82d Airborne Division was withdrawn from the fighting at Salerno and sent to Britain.

The narrow margin on which we were compelled to allocate our resources so that Germany might be defeated at the earliest possible moment required superhuman effort by troops and commanders. Every available combat aircraft of both the Tactical and the Strategic Air Forces was thrown into the action. Bombers flew two missions a day, isolating the battle area and pounding German strongpoints. During the four critical days our Air Forces flew 3,000 sorties and dropped 2,150 tons of bombs in close support of the ground action. Naval gunfire sup-

ported the ground troops, and the Navy kept the stream of reinforcements coming in. On 13 September, and again the next day, reinforcing troops of the 82d Airborne Division went ashore. By the morning of 15 September the assault was firmly established, the high ground commanding the beaches had been taken, and the crisis had passed. While the fighting was in progress during these critical days General Eisenhower found time to inform me:

... We are very much in the "touch and go" stage of this operation. We got the Italian Fleet into Malta and, because of the Italian surrender, were able to rush into Taranto and Brindisi where no Germans were present. Our hold on both places is precarious but we are striving mightily to reinforce.

Our worse problem is AVALANCHE itself. We have been unable to advance and the enemy is preparing a major counterattack. The 45th Division is largely in the area now and I am using everything we have bigger than a row boat to get the 3d Division in to Clark quickly. In the present situation our great hope is the Air Force. They are working flat out and assuming, which I do, that our hold on southern Italy will finally be solidified, we are going to prove once again that the greatest value of any of the three services is ordinarily realized only when it is utilized in close coordination with the other two . . .

On 16 September, patrols of the Fifth and Eighth Armies met 40 miles southeast of Salerno uniting the fronts of General Alexander's Fifteenth Army Group. The critical phase of the Italian campaign had ended.

Shortage of assault shipping and landing craft continued to haunt our operations. A single division, for example, required for its landing at Salerno 30 LST's, 24 LCT's, 39 LCI's, 9 large transports, 4 freighters, and numerous miscellaneous small landing craft. Nevertheless, during the first 18 days Navy crews and Army service troops landed over the Salerno beaches a total of 108,000 tons of supplies, 30,000 motor vehicles, and 189,000 troops.

Allied Air Established in Europe

The advance on Naples followed the successful completion of the fighting at Salerno. The Fifth and Eighth Armies under General Alexander were now deployed abreast. The Fifth occupied Naples and its harbor on 1 October and the Eighth Army reached Foggia, seizing its extensive system of airfields. Field Marshal Kesselring, commanding the German Forces in Italy, withdrew northward to delaying positions along the Volturno River. Sardinia had been evacuated

by the Nazis on 20 September and on 4 October the evacuation of Corsica followed.

The capture of Foggia airfields confirmed our hold on the mainland. Fighters based in Sicily could carry enough gasoline to operate only about 15 minutes over the Salerno beachhead. Now they could be based in large numbers close to the battle area. From Foggia our heavy bombers could easily strike at the passes crossing the Alps, attack Germany air installations in Austria and factories in southern Germany, and raid industrial and transportation centers in the Balkans, aiding the Red Army. In addition the B-17's and B-24's of the Strategic Air Forces could reinforce the efforts of the Tactical Air Forces in isolating the Italian battle area.

Movement of the heavy bombers and fighter forces into Foggia was a tremendous undertaking because of the equipment necessary to establish new runways, pumping plants, pipe lines, repair shops, and warehouses. For some weeks a considerable portion of the shipping was devoted to the movement of the Air Forces onto the Italian mainland. By the end of the year 35,000 combat airmen with their supporting forces were established in Italy. There were two heavy bombardment groups, two medium groups, and two fighter groups operating from 10 airfields. The fall weather made it necessary to overlay the runways with steel mat. Pipe lines and pumping stations, largely recovered from North Africa, had to be installed to permit the necessary flow of aviation fuel to the airdromes. This build-up of air power consumed approximately 300,000 tons of shipping during the most critical months of the Italian campaign. So heavy were the shipping requirements of the Fifteenth Strategic Air Force, activated 1 November 1943 under General Doolittle, that the build-up of our ground forces in Italy was considerably delayed. This decision was a difficult one for General Eisenhower since the delay would give the enemy a heavy superiority in ground troops for a considerable period.

There were now 11 Allied divisions in the Italian line, but the Germans had at least 24 on the Italian mainland. Although 14 of these were in Northern Italy outside the combat zone, the enemy was in a position to build up a considerably greater defensive force than General Eisenhower had available for his attack. The additional Allied air power and the threat of a landing further north by General Patton's Seventh Army were counted on to deter the enemy from mov-

ing his divisions south from the Po Valley. This threat was exploited by skillful use of General Patton and his headquarters. Following the Sicilian campaign, the Seventh Army headquarters, which no longer had any divisions assigned to it, was moved to Corsica. General Patton's mysterious movements throughout the Mediterranean area kept the Germans guessing where the Seventh Army, which they had learned to fear so much in Sicily, might strike next.

Early in November the II Corps, then commanded by Maj. Gen. Geoffrey Keyes, moved to the mainland of Italy from Sicily. German plans to hold the line of the Volturno were frustrated when on the night of 12-13 October the II Corps and the VI Corps, now commanded by Maj. Gen. J. P. Lucas, of the Fifth Army forced crossings of that river. Destroying every bridge and culvert en route, the Germans withdrew to the "winter line" which they had been preparing feverishly since the Allied landings on the mainland. This defensive position stretched across the peninsula, following generally the lines of the Carigliano and Sangro Rivers, about 75 miles south of Rome.

The Slugging Battle for Rome

Winter had arrived. Heavy rains were falling and streams were in constant flood. The resources of our engineers were taxed to keep in place the temporary bridges on the vital supply routes. Vehicles and men mire deep in mud.

Despite the difficulties there was no relaxation of pressure. The purpose was to seize Rome as quickly as possible and engage the maximum number of German divisions. The offensive was a series of attacks and pauses, the immediate objectives being key terrain features. It was the hardest kind of fighting. The Germans had mined the roads, trails, natural cross-country routes of advance, and even the stream beds. To reinforce terrain barriers the enemy constructed strongpoints in which he skillfully employed mine fields, wire entanglements, log-and-earth emplacements, and automatic weapons. Machinegun and mortar emplacements, many of them dug four or five feet into solid rock, covered every approach. To deal with them the artillery was heavily reinforced by batteries of the heaviest field pieces we had produced. The 240-mm Howitzer and the 8-inch gun were rushed from the United States.

In December the Fifth Army arrived before the entrance to the Cassino corridor to Rome. The 2d

Moroccan Infantry Division arrived in Italy at this time and was assigned to it. The United States had agreed to equip eight French infantry and armored divisions including supporting troops. The Moroccan division was the forerunner of the *Corps Expéditionnaire Français* which, under the leadership of Gen. Alphonse Juin, greatly distinguished itself in the hard fighting of the months that followed.

Allied interest in the Eastern Mediterranean shifted to the Balkans following the conclusion of the North African campaign. Maj. Gen. Lewis H. Brereton's Ninth Air Force based in Northeast Africa bombed strategic targets there, including the Ploesti airfields and, with elements of the Royal Air Force's Middle East Air Command, dropped supplies to the hard-pressed patriot forces.

The Eastern Mediterranean had constituted a separate theater under British Command until 5 December 1943 when the entire offensive in the Mediterranean was brought under one command. On that date the Combined Chiefs of Staff delegated to General Eisenhower responsibility for all operations in the Mediterranean other than strategic bombing. Three weeks later on 24 December, he was appointed Supreme Allied Commander of the invasion forces from the West, meaning from the British Isles, and was ordered to England to take over the final preparations. General Montgomery, Air Chief Marshal Tedder, and General Bradley joined him there. Gen. Sir Henry Maitland Wilson was named Supreme Commander of Allied Forces in the Mediterranean Area, to succeed General Eisenhower, and Lt. Gen. Jacob L. Devers, U. S. Army, was appointed his deputy. Lt. Gen. Sir Oliver W. H. Leese assumed command of the British Eighth Army. General Clark continued in command of the Fifth Army.

At this time Lt. Gen. Carl Spaatz was selected to command the United States Strategic Air Forces in Europe with headquarters in London, and General Doolittle was appointed commander of the Eighth Air Force, vice Lt. Gen. Ira C. Eaker, who assumed command of the Mediterranean Allied Air Forces. Maj. Gen. Nathan F. Twining was given command of the Fifteenth Strategic Air Force and Maj. Gen. J. K. Cannon continued in command of the Twelfth Tactical Air Force.

Early in January the French Corps, under General Juin, took over the right sector of the Fifth Army Front

from the United States VI Corps, which was withdrawn to prepare for the Anzio landings. The Fifth Army then launched its attack against the line of the Garigliano River.

To disrupt communications in the rear of German forces in the Cassino area, the VI Corps landed on beaches near Anzio, 25 miles south of Rome, on 22 January. The landing forces included the 3d United States Division, a British infantry division, and American Ranger and parachute units. Reacting swiftly to the threat to his rear, the enemy rushed both infantry and armor to the Anzio area, the Hermann Goering Panzer Division was hastily shifted to the beachhead area and other divisions were sent down from Northern Italy. By the end of January the Allied troops in the beachhead faced a perimeter of strong German forces. With observation from the surrounding hills the Germans were able to deliver persistent accurate artillery fire throughout the flat beachhead and against ships near the shore.

Defeating the initial effort to capture Cisterna, the enemy drove in an attack to split the beachhead and annihilate our forces ashore. A masterful defense, in which the 3d and 45th Divisions suffered heavily but fought magnificently, halted the counterattacks which reached their peak of intensity on 17 February. Later in the month, the Hermann Goering and 29th Panzer Grenadier Divisions led another unsuccessful drive aimed at Anzio.

Further south the Fifth Army offensive had been halted before strong defenses of Cassino. Some of the bitterest fighting of the war raged at this point. Determined attempts to capture the town failed in the face of fanatical resistance by crack German units—notably the 1st Parachute Division, which General Alexander termed the best German division on any front. Lt. Gen. Jacob L. Devers, Deputy Allied Commander, wrote me on 22 March:

We are struggling here with time. On March 15th I thought we were going to lick it by the attack on Cassino and advance up the Liri Valley. We used air, artillery, and tanks, followed closely by infantry. I witnessed the attack from across the valley. It got off to a start with excellent weather. The bombing was excellent and severe, and the artillery barrage which followed it and lasted for two hours was even more severe and accurate, with 900 guns participating. Two groups of medium bombers, followed by 11 groups of heavies, followed by three groups of mediums, started on the minute at 8:30 a. m. and closed at 12:00 noon, the groups coming over every 10 minutes up to 9:00 o'clock and thereafter every 15

minutes. In spite of all this and with excellent support all afternoon with dive bombers and artillery fire, the ground forces have not yet attained their first objective. Consequently, the tanks which were to attack in mass could not get started. These results were a sobering shock to me. The infantry had been withdrawn in the early morning hours five miles to the north of Cassino. When they arrived back in the town of Cassino at approximately 1:00 o'clock close behind the barrage, the Germans were still there, were able to slow up their advance and even to reinforce themselves during the night by some unaccountable means.

The attack is still going on but it is my opinion that all we will gain will be the town of Cassino and possibly a bridgehead over the Rapido in that vicinity; General Alexander must then stop and regroup his forces, which he hopes to accomplish by the 15th of April.

After regrouping, the Fifth and Eighth Armies launched a coordinated offensive on 11 May. As the attack got underway, the U. S. VI Corps, now under Maj. Gen. L. K. Truscott, struck out from Anzio beachhead on 23 May. The attack was made by the 3d, 34th, and 45th Infantry Divisions, the 1st Armored Division, the 1st Special Service Force, the 100th Japanese Infantry Battalion, composed of Americans of Japanese descent, and two British divisions. The 1st Special Service Force drove east to pave the way for a junction on 25 May with other Fifth Army forces advancing northwest along the coast. These forces included the 88th and 85th Divisions which had recently arrived from the United States and entered the line in March and April. Activated after 7 December 1941 and composed almost entirely of selectees, these two new divisions fought as veteran units in their first combat assignment, overcoming extremely heavy resistance. This was the first confirmation from the battlefield of the soundness of our division activation and training program, which was described in detail in my last report.

The units from the south then moved to Anzio from which the beachhead forces were already thrusting northeastward for the final drive on Rome. On their right the French Corps under General Juin struck into the heart of the German positions covering the Liri Valley and precipitated a general withdrawal to the north of Rome. The Italian capital fell to the Fifth Army on 4 June, two days before Allied forces began the invasion of France.

We were weakened seriously in the intense fighting along the approaches to Rome by our inability to replace the casualties promptly. On 4 February General Devers had reported:

Casualties have been unusually heavy for the past 10 days, particularly in infantry. Clark reports 3d Division casualties alone total 2,400 infantry. A shortage in the 34th Division is 1,300 and in the 36th Division, 3,000. Since present operations involve simultaneous use of all divisions, it is imperative that table of organization strength be maintained.

Two weeks later he again reported:

Replacements allocated to this theater are not adequate to sustain operations in Italy on the present scale. At the present time the United States part of the Fifth Army has an effective net shortage of 13,072 officers and men.

This shortage of men needed so desperately in our battle line resulted from the inability of the Selective Service System to meet the Army's call for manpower the previous summer. In July, Selective Service had delivered 194,000 men of the Army's call of 235,000. In August and September the Army had requested 175,000 men a month and received 131,000 in August and 122,000 in September.

Pursuit to the North

Pursuit of the enemy was energetic even though we were now making heavy withdrawals in preparation for ANVIL, the attack in Southern France which was scheduled for August. Between mid-June and the last of July more than a division a week was withdrawn from the forces in Italy to train and stage for this operation. The 45th was ordered out of the line on 14 June, the 3d on 17 June, and the 36th on 27 June. The United States IV Corps under Maj. Gen. W. D. Crittenger moved into the line in place of the VI Corps, which had been withdrawn 13 June. The French Corps of four divisions (1st Motorized Moroccan, 3d Algerian Infantry, 4th Moroccan Mountain, and 2d Moroccan Infantry) were withdrawn between 2 and 21 July, and replaced by the II Corps which had been out of the line for a rest.

To compensate partially for this heavy drain on his resources and to utilize more fully anti-aircraft units which were no longer required in such large numbers as a result of our increasing air superiority, the theater commander retrained several groups as infantry to form the 473d Infantry. At this time the 442d Infantry Regiment, composed of Americans of Japanese descent, was fighting with distinction on the left flank of the Fifth Army. Thus, by the end of June, Pescara, 95 miles east of Rome, had been captured and the Allied line extended across the peninsula through Lake Trasimeno. In July the Fifth and Eighth Armies gained 50 miles.

After heavy fighting lasting two weeks, Florence fell to British troops of the Fifth Army. Five days later United States troops captured Pisa. Meanwhile, the Eighth Army had passed through the Apennine Divide, and on 21 September captured Rimini in the valley of the Po.

During the withdrawal of troops for ANVIL, one American division, the 91st, had arrived to reinforce the Fifth Army. On 15 September a combat team of the Brazilian Expeditionary Force moved into the Fifth Army line in the Valley of the Serchio River. Before the end of autumn the entire Brazilian division was in the line. During this same period one of the Army's two Negro divisions, the 92d, which had reached Italy during the late summer and fall, was assigned to the IV Corps.

The advances had brought General Alexander's Allied armies up against the "Gothic Line," an elaborate transpeninsular defense system which the Germans had been preparing since early in the year. Despite the heavy diversion of troops to other theaters it was decided to launch another general offensive on 10 September for the purpose of breaking through the Apennines into the Po Valley. While the U. S. Fifth Army assaulted the Gothic Line frontally through the mountains, the British Eighth Army, now commanded by Lt. Gen. Sir R. L. McCreery attacked northwest from Rimini. This offensive involved our troops in some of the bitterest and most difficult fighting of the Italian campaign. The jagged Apennines and bad weather seemed almost insurmountable obstacles.

After three months of this costly but successful penetration of the Gothic Line, the Allied command prepared in December to drive on Bologna, but pressure against the western flank of the Fifth Army and diversion of Eighth Army units to meet the political crisis in Greece disrupted these plans. Meanwhile the Germans had time to refit and strengthen their forces and establish a new defensive position. Kesselring was under orders to hold south of Bologna. In addition to German replacements, the enemy brought up units of Mussolini's Fascist Republican Army, which had a strength of four new Italian divisions.

On 12 December 1944 Field Marshal Alexander replaced Gen. Sir Henry Maitland Wilson as Supreme Commander in the Mediterranean area. General Wilson was promoted to Field Marshal and senior representative in Washington of the British Chiefs of Staff. Lt. Gen. Mark W. Clark moved up to command the

Allied armies in Italy and Lt. Gen. Lucian K. Truscott assumed command of the Fifth Army.

In January the Fifth Army was reinforced by the 10th U. S. Mountain Division which gave a fine exhibition of battle efficiency on its initial employment. During the winter, three Italian combat groups entered the line of the Eighth Army. These small gains were more than offset by a February directive from the Combined Chiefs of Staff which ordered the transfer of five British and Canadian divisions to the European Theater. The directive was later amended to send three to France, one to the eastern Mediterranean, and retain one division in Italy for possible use in the impending final battle. This movement of more than 125,000 combat troops was accomplished in complete secrecy and gave Marshal Montgomery's Northern Army Group on the Rhine additional power to the surprise of the enemy.

During the fall and winter months, the Tactical and Strategic Air Forces pounded away at communications over the Alps and in Northern Italy. With opposing ground forces so nearly equal in strength, the Air Forces represented our margin of advantage and made the maintenance of German forces in Northern Italy most difficult while our own was unmolested. In addition, Italy-based aircraft assisted the Yugoslav patriots. Closely coordinated with the attacks staged from Britain, the Strategic Air Forces struck heavy blows at oil and rail targets in Austria and southern Germany, averaging weekly bombloads of nearly 4,000 tons.

The Final Phases

Ground action on the Italian front in the late winter was limited to small but important advances in the mountains southwest of Bologna. The strategic aircraft kept up the pressure on communications and industrial targets beyond the Alps, reaching as far north as Berlin.

On 9 April, General Clark's Fifteenth Army Group launched its spring drive, known as operation GRAPE-SHOT. The Eighth Army led off with an attack across the Senio River west of Ravenna. In spite of unusually heavy air and artillery preparation, the offensive met stiff opposition from the German Tenth Army in approaching the Argenta Gap. Five days later, after the enemy had presumably had time to dispose himself to meet the Eighth Army attack, the II and IV Corps of the Fifth Army threw their weight

into the offensive from positions in the Apennines south and southwest of Bologna.

After a week of heavy fighting our troops broke into the Po Valley and entered Bologna from the west and south. At the same time, Polish forces of the Eighth Army entered the city from the east. The Fifth Army columns beyond the city swept up the great highway leading to Piacenza—the ancient Via Emilia—and, by-passing Modena to the east, drove toward the Po south of Mantua. Pursuing the disorganized enemy to the river, bridgeheads were quickly established across the Po on 23 April. The Eighth Army met determined resistance in Ferrara, but by the 25th had crossed the Po in force. On the same day, our forces on the Ligurian Coast captured La Spezia with its naval base. The German armies were virtually destroyed south of the Po, the bulk of their equipment being either destroyed or abandoned.

The final week of the war in Italy brought wide advances throughout northern Italy. Bridging many rivers that flow south from the Alps, the Eighth Army swept northeast along the Adriatic coastal plain, liberating Padua, Venice, and Treviso. While Fifth Army infantry and mountain troops drove into the foothills of the Alps along the Brenner route, other armored columns and motorized infantry raced up the valley of the Po and by 29 April had reached the great city of Milan.

On every side effective support was received from the Italian patriots. After seizing Genoa, our Ligurian forces drove beyond Savona to make contact with the French. Advance elements of the 442d Japanese-American regiment reached Turin. Resistance collapsed everywhere; more than 160,000 prisoners were taken by the Allied armies. By the first of May, Eighth Army troops advancing on Trieste had made contact with Yugoslav partisans at Monfalcone. On 2 May 1945 the commander of the German armies in Northern Italy found it impossible to continue the bloody struggle and capitulated.

The Italian triumph is a striking demonstration of the solidarity of the United Nations. Fighting under the Fifteenth Army Group, at some time during the Italian campaign, were Americans, British, Canadians, French, New Zealanders, South Africans, Poles, Indians, Brazilians, Italians, Greeks, Moroccans, Algerians, Arabs, Goums, Senegalese, and a brigade of Jewish soldiers.

FINAL OFFENSIVE IN ITALY

The entire campaign was slow and bitter. The Allied troops did not have the superiority they enjoyed in Western Europe, where geography had compelled us to make the great effort. Nonetheless, the Italian campaign made a heavy contribution to the successes on the Western front, pinning down German forces which

Hitler needed badly to reinforce his weakened armies, both in the east and west. The troops participating in the Italian campaign should feel as great a satisfaction in the defeat of the Axis enemy as those of the larger forces which drove into the heart of Germany from the west and made contact with the Red armies.

ORDER OF BATTLE MEDITERRANEAN THEATER OF OPERATIONS AS OF 2 MAY 1945

[The order of battle of our Allies is not shown below Army level, except to show U. S. division under their operational control.]

Unit	Commander	Location
Fifteenth Army Group	Gen. Mark W. Clark	Florence, Italy
Fifth Army	Lt. Gen. Lucian K. Truscott	Verona, Italy.
II Corps	Lt. Gen. Geoffrey Keyes	Italy.
10th Mountain Division	Maj. Gen. George P. Hays	Italy.
85th Infantry Division	Maj. Gen. John B. Coulter	Italy.
88th Infantry Division	Maj. Gen. Paul W. Kendall	Italy.
IV Corps	Maj. Gen. Willis D. Crittenger	Italy.
1st Armored Division	Maj. Gen. Vernon E. Prichard	Italy.
34th Infantry Division	Maj. Gen. Charles L. Bolte	Italy.
92d Infantry Division	Maj. Gen. Edward M. Almond	Italy.
British Eighth Army	Lt. Gen. Sir R. L. McCreery	Italy.
91st Infantry Division	Maj. Gen. William G. Livesay	Italy.
U. S. Army Air Forces in MTO	Lt. Gen. J. K. Cannon	Caserta, Italy.
Twelfth Air Force	Maj. Gen. B. W. Chidlaw	Florence, Italy.
XXII Tactical Air Command	Brig. Gen. T. C. Darcy	Italy.
Fifteenth Air Force	Maj. Gen. N. F. Twining	Bari, Italy.
XV Fighter Command	Brig. Gen. D. C. Strother	Italy.

Operation OVERLORD

In November and December 1943, the Combined Chiefs of Staff had met with President Roosevelt and Prime Minister Churchill at the SEXTANT Conference in Cairo and then with the President, Prime Minister, Marshal Stalin and his Military adviser at Teheran. By that time it was clear how the defeat of Germany could be brought about—but the Allies were beset by innumerable specific problems of implementing the desired strategy.

The greatest of these by far was the critical shortage of landing craft. Those available for the top priority operation OVERLORD in Normandy still seemed insufficient and there were many other vital operations that had to be undertaken if we were to maintain the initiative on the global battlefronts. Even though an attack in the south of France was considered essential to the success of OVERLORD, the Combined Chiefs of Staff had previously directed that 68 landing ships be returned from the Mediterranean Theater to the United Kingdom beginning 15 January to meet the requirements of the cross Channel assault as then planned. Despite these additional ships, it became evident that there would not be sufficient landing craft in Great Britain by the invasion target date to provide a sufficient margin of safety for the hazardous amphibious assault. Therefore, upon their return to Cairo from Teheran, the Combined Chiefs resolved that more strenuous measures must be taken to permit a broadening of the initial landing in Normandy. The Mediterranean Theater could be bled no further. Only sufficient resources were left there for an assault force of two divisions for Southern France, and military intelligence indicated that while this force could probably overcome anticipated German resistance on the Riviera coast, the rapid development of the operation northward up the Rhone valley would not permit further reduction. The remaining possible source for additional landing ships was in the shipyards of Great Britain and the United States. Such an increase in time for OVERLORD would require a miracle of production since these shipyards were already overcrowded and working at furious speed to maintain the heavy existing schedule of landing craft production, as well as that for the construction of destroyers and destroyer escorts urgently required to combat the German submarines.

An added complication at this time was the possibil-

ity that Turkey might enter the war on the side of the United Nations, exposing herself to attack by Bulgaria. The possibility of operations to support her in the eastern Mediterranean had to be considered.

At the same time there was grave concern over the situation then obtaining in Asia. The Generalissimo, Chiang Kai-shek, met with President Roosevelt, Prime Minister Churchill, and their military advisers at Cairo, and all were convinced that a determined effort must be made to reestablish surface communications with our Chinese Allies in 1944. Agreement was reached for operation CAPITAL in which the forces of Admiral Mountbatten and General Stilwell were given the mission of investing Northern and Central Burma. It was realized that the success of these operations could be made much more certain by an amphibious landing in the Bay of Bengal, but there were not sufficient landing craft to insure the success of our European offensive and at the same time undertake a landing on the shores of Burma.

Victory in this global war depended on the successful execution of OVERLORD. That must not fail. Yet the Japanese could not be permitted meanwhile to entrench in their stolen empire, and China must not be allowed to fall victim to further Japanese assaults. Allied resources were searched through again and again, and strategy reconsidered in the light of the deficiencies. These conclusions seemed inescapable: France must be invaded in 1944, to shorten the war by facilitating the advance westward of the Soviet forces. At the same time German technological advances such as in the development of atomic explosives made it imperative that we attack before these terrible weapons could be turned against us. In addition, the pressure on the Japanese in the Pacific must not be relaxed. Communications with China must be reopened. Resources were allocated accordingly. The balance was extremely delicate but we had to go ahead.

When General Eisenhower was selected as the Supreme Allied Commander for OVERLORD after the resumption of the conference at Cairo in December, he received this directive:

You will enter the continent of Europe and, in conjunction with the other Allied Nations, undertake operations aimed at the heart of Germany and the destruction of her armed forces.

Accompanied by his Deputy Commander, Air Chief Marshal Sir Arthur Tedder, General Eisenhower arrived in Britain in mid-January. Almost immediately he wrote:

It is obvious that strong and positive action is needed here in several directions. The location of various headquarters, the exact pattern of command, the tactics of the assault, and the strength in units and equipment, are all questions that have not yet been definitely settled. The most important of all these questions is that of increasing the strength of the initial assault wave in OVERLORD.

The search for greater resources for OVERLORD continued until it seemed that the time and energy of the Allied commanders was almost completely absorbed by a problem that defied solution. We had gone to the shipping experts and the shipyard owners to urge them to bend greater than human efforts to step-up the output of their precious landing craft. The shipyards broke all records to meet our requirements but there still were not enough landing craft in sight.

After intensive calculations which taxed the endurance of the military and naval planners, two major decisions were made. The target date of invasion was advanced from early May to early June, even though this pushed us closer to the time when weather conditions would turn against us. The operations in Southern France, which were originally to be made simultaneously with the attack on Normandy, were delayed months so that landing craft could be used first in the Channel, then rushed to the Mediterranean to do double duty both in OVERLORD and ANVIL.

The Preparations

At the time of the QUADRANT Conference at Quebec in August 1943, there had been but a single United States division in the United Kingdom and our trans-Atlantic shipping effort was concentrated on filling the heavy requirements of the Mediterranean campaign. By late August 1943, shipping was partially released from this heavy southern commitment and troops again began to pour into the British Isles. On D-day, 6 June 1944, the strength of the United States Army in that theater was 1,533,000; in the interim an average of 150,000 men had been transported each month.

The build-up of this force, together with a corresponding accumulation of supplies of all kinds, involved

a tremendous job of transportation, and special credit must be given to the Navy for its vital part in the undertaking. An enormous administrative task was also involved, since facilities for quartering and training such large forces had to be provided within the limited area of the United Kingdom. The efficiency of the preinvasion build-up is exemplified by the speed with which units landing in Britain were provided with their essential arms and equipment. Through a system of preshipping and storing, the Army Service Forces were able to have equipment distributed and waiting for each unit on its arrival. Within a maximum of 30 days after debarking, divisions were fully equipped and ready for action.

The units arriving in the United Kingdom from America were well trained, especially in fast-moving corps and army operations over large areas; those coming from the Mediterranean were battle-tested. Nonetheless, everything possible was done during their staging period in the United Kingdom to increase their combat efficiency despite the limited terrain available in a densely populated and cultivated countryside. The troops which were to make the assault landings maneuvered realistically on beaches and ground which approximated the target areas. In the early spring of 1944, joint exercises of the ground, sea, and air forces which were to make the attack were held along the southern coast of England. It was a full-dress rehearsal.

Three weeks before the invasion General Eisenhower wrote:

There is no question at all as to the readiness of the troops. They are well trained, fit, and impatient to get the job started and completed. In forecasting future possibilities, it is, of course, necessary that we seek ways and means to bring to bear those factors in which we enjoy a great superiority over the enemy. These are control of the sea, command of the air, including resources in airborne troops and armor. I am trying to visualize an operation in which we would bring in behind the initial beachhead a great strength in armor and seek an opportunity to launch a big armored attack in conjunction with a deep and very heavy penetration by airborne troops.

Victory In The Air

By 1 July 1943 the Allied strategic air assault of Air Chief Marshal A. T. Harris' Royal Air Force Bomber Command by night and General Eaker's Eighth Air Force by day on the fortress of Europe was in full swing and was producing important results. Single raids in which the air force delivered bomb

loads of more than 500 tons had been carried out. Serious inroads had been made on the combat power of the German fighter force.

These results had been obtained with an American air fleet of less than 1,000 heavy bombers and 1,000 planes of other types. By D-day, the strength of the United States air forces in the United Kingdom exceeded 3,000 heavy bombers and 6,500 first-line planes of other types. The attacks on Germany continued with increasing intensity and shattering power.

The climax in air war came in February 1944, when the Luftwaffe made a powerful effort to sweep our day bombers from the skies. The battle raged for a week. It was fought over Regensburg, Merseburg, Schweinfurt, and other critical industrial centers. The German fighter force was severely crippled, and our attacks continued with unabated fury.

From the time of the Eighth Air Force's first heavy bomber attack on 17 August 1942 until V-E Day, United States airmen had dropped more than 1,550,000 tons of bombs on western European targets. During 1943, following successful attacks on the enemy's submarine yards and bases, the effort of our precision bombers was concentrated against aircraft and ball-bearing manufacturing plants, airdromes, and communications. The German fighter command, already outclassed in aerial combat, was further reduced by inability to get replacements. The RAF Bomber Command concentrated upon the destruction of the Ruhr-Rhineland industries and the undermining of the morale of industrial workers.

In order to exploit more fully the flexibility of our bombardment, particularly against German industrial targets, the Eighth and Fifteenth U. S. Air Forces were combined on 1 January 1944 to form "The U. S. Strategic Air Forces in Europe." Lt. Gen. Carl Spaatz was placed in command. The component forces continued to be based in the United Kingdom and in Italy respectively.

In the late spring of 1944, synthetic fuel plants and crude oil refineries became the prime targets. Captured documents now show that the bombing campaign succeeded in reducing production between May and October 1944 to five percent of the former monthly output.

The attack on German industry was coupled with strikes on German communications. Vital rail junctions and the canals which were so important in the enemy's transportation system were repeatedly bombed.

During a single month—May 1944—more than 900 locomotives and 16,000 freight cars were destroyed in Western Europe. The effects of this phase of the air assault were enormous, for transportation and communications are the life arteries of a modern industrial state engaged in total war.

Medium bombers and fighter-bombers of Lt. Gen. Lewis H. Brereton's Ninth Air Force, which moved from the Middle East during the fall of 1943, struck enemy airfields in diversionary attacks so timed as to reduce the concentration of enemy fighters which might oppose the passage of the heavy United States bomber formations. Diversionary fighter sweeps further dislocated the enemy's air opposition. As the range of fighters was increased through the installation of additional fuel tanks, they were employed more and more to escort bombers to targets deep in Germany.

As the aerial offensive mounted the enemy was forced to withdraw fighters from the support of his armies in the East to meet the threat from the West. This was an important factor in enabling the Soviet air forces to maintain superiority on their front.

It was not merely overwhelming numbers of planes which gave our air assault its great effectiveness. There were important, almost revolutionary, improvements in techniques and in equipment. To reduce the excessive aircraft losses in long, round-trip bombing flights exposed to constant enemy interception, a system of shuttle-bombing between bases in the United Kingdom and North Africa was initiated in mid-August 1943. The shuttle-bombing run was shortened as the advance in Italy continued. A shuttle system between Italy and the U. S. S. R. was inaugurated with a heavy raid on rail communications in Central Europe on 2 June 1944. Soon thereafter, shuttle-flights were made between the United Kingdom and the new Ukrainian bases.

Radar bombing technique, first employed in the fall of 1943, improved constantly. All-weather bombing approached reality; our bombers used the cover of darkness and inclement weather to achieve surprise, yet still hit their target with precision.

In the spring of 1944, three months before D-day, the Allied air forces, while still hammering at their strategic targets, began directly to prepare the way for the invasion. Through destructive attacks on key bridges and rail centers, the "invasion coast" was effectively isolated. As a result of this preparatory bombing, the ability of the enemy to shift reserves to the critical area was severely restricted. Since the outcome of an

amphibious operation hinges on the relative ability of the opposing forces to build up strength in the critical areas, this air preparation was a decisive factor in the success of OVERLORD. Even with favorable Channel weather, it would have required at least 15 weeks for the Allies to land as many divisions as the Germans had available in Belgium and Northern France.

The Assault

The beaches of Normandy were chosen for the assault after long study of the strength of German coastal defenses and the disposition of German divisions. The absence of large ports in the area was a serious obstacle, but it was offset in some measure by the relative weakness of the German defenses and elaborate construction in Britain of two artificial harbors to be emplaced off the beaches.

The selection of target dates and hours for the assault required an accurate forecast of the optimum combination of favorable weather, tide, and light conditions. Moonlight was desirable for the airborne operations. D-day was scheduled for 5 June; this date was changed to 6 June because of unfavorable but clearing weather. Hundreds of craft, en route from distant ports on the west coast of England, were already approaching the invasion area; they had to backtrack

or seek shelter in the overcrowded harbors on the south coast. The final forecast for the attack day predicted high winds; the sea was still rough, but rather than accept a delay of several weeks until tide and moon provided another favorable moment, General Eisenhower made the fateful decision to go ahead.

At 0200 hours on 6 June 1944, the American 82d and 101st Airborne Divisions, as well as British airborne troops, were dropped in vital areas in the rear of German coastal defenses guarding the Normandy beaches from Cherbourg to Caen.

The seaborne assault under the over-all command of Field Marshal Montgomery was made on a broad front; British and Canadian forces commanded by Lt. Gen. Sir Miles C. Dempsey and American forces commanded by Lt. Gen. Omar N. Bradley deployed against 50 miles of coast line. Aerial bombardment of beach defenses along the coast began at 0314, preliminary naval bombardment at 0550, shortly after sunrise. At 0630 the first waves of assault infantry and tanks landed on the invasion beaches.

German defenses on all beaches were formidable; they consisted first of bands of underwater obstacles designed to break up formations of landing craft; mines were freely used to make these obstacles more lethal. The beaches themselves were heavily mined and strung with wire. Concrete pillboxes and gun

emplacements were sited to deliver withering cross-fire along the beaches. All exits leading inland from the beaches were blocked by antitank walls and ditches, mine fields, and barbed wire. Further inland, mortars and artillery were sited to deliver indirect fire on the beaches. Open fields were blocked against glider landings by patterns of heavy stakes, but complete intelligence gathered up to the moment of assault provided detailed knowledge of enemy dispositions and enabled the troops to breach the defenses.

In the American sector, the beach areas totaled 10,000 yards in length. Every 75 yards a landing craft loaded with assault infantry touched down at H-hour. Assault veterans charged down the ramps, picked their way through the bands of obstacles, and immediately provided cover for the work of naval and engineer demolition crews which followed close behind. Each crew had a specific task to perform in clearing lanes for

subsequent waves of craft carrying infantry, artillery, vehicles, and supplies. Naval gunfire and air bombardment hammered at artillery and mortar positions, pillboxes, and gun emplacements.

Resistance by German ground elements was stubborn, and bitter fighting developed in many sectors. Our long campaign against the Luftwaffe had greatly weakened its capacity for combat and, as a result, there was no effective air opposition to our highly vulnerable initial landings. Reinforcements continued to pour ashore, and by nightfall on D-day, five American divisions, the 1st, 4th, 29th, and 82d and 101st Airborne, with tanks, artillery and other reinforcements, were firmly established. Also ashore were advance detachments of the headquarters of Maj. Gen. Leonard T. Gerow's V Corps and Maj. Gen. J. Lawton Collins' VII Corps. The British build-up in their sector was on a corresponding scale. Additional divisions still afloat were

being landed in a steady stream, constantly augmenting the superiority which our assault troops had already established over the German defenders.

By the second morning it was clear that the beachhead was secure and that the greatest and longest step toward the destruction of the German armies of the west had been taken. The "crust" of the German coastal defense system had been broken. The German boast that an invading force could not remain ashore for nine hours had been flung back on the now desperate defenders.

Shortly after D-day the Combined Chiefs of Staff met in London in order to be immediately available should an emergency arise requiring a prompt decision on some matter beyond General Eisenhower's jurisdiction as Supreme Commander. The assault went so well that it was possible on 12 June for the Combined Chiefs to visit the beaches of Normandy and observe at first hand the magnitude of the undertaking and the gallant and skilful manner in which the Allied forces were overcoming the resistance of the veteran German soldiers.

Our Army feels great pride in the Normandy assault. So must the Navy and our British Allies. The Navy's mission was to transport the troops across the Channel, to land them properly on the beaches, and to support the landings with gun and rocket fire. If the Allied navies had not performed this task brilliantly, the invasion would have failed before it was well begun. The combined planning of British and American staffs, working together as a single team with excellent knowledge of enemy dispositions, resulted in precise execution of an operation so complicated that it almost defies description; its success must be attributed in great measure to wholehearted Allied cooperation, as well as to the stout hearts and fearless courage of the men. The destruction of rail and road communications by the air forces and their constant strafing of the highways continued to prevent the enemy from concentrating a superior force against the beachhead.

The Breakout

The second phase of the invasion had two objectives: first, the capture of the port of Cherbourg; and, second, the build-up of sufficient forces and matériel to enable the forces to break out from the beachhead and strike toward Germany. Now the fighting grew fiercer. After a bitter and costly struggle, Cherbourg

fell on 27 June to the 4th, 9th, and 79th Divisions of General Collins' VII Corps. Damage in the harbor was so extensive and difficult of repairs that until the late fall thousands of tons of matériel were still pouring over the beaches. Other Allied forces had, by 1 July, deepened the beachhead by advances up to 20 miles in the area between Caen and St. Lo against increasingly stubborn resistance in the aggressively defended hedgerows of the Cotentin Peninsula.

General Eisenhower wrote on 5 July:

The going is extremely tough, with three main causes responsible. The first of these, as always, is the fighting quality of the German soldier. The second is the nature of the country. Our whole attack has to fight its way out of very narrow bottlenecks flanked by marshes and against an enemy who has a double hedgerow and an intervening ditch almost every 50 yards as ready-made strong points. The third cause is the weather. Our air has been unable to operate at maximum efficiency and on top of this the rain and mud were so bad during my visit that I was reminded of Tunisian wintertime. It was almost impossible to locate artillery targets although we have plenty of guns available. Even with clear weather it is extraordinarily difficult to point out a target that is an appropriate one for either air or artillery.

In spite of the lack of a major port, the build-up in the beachhead was completed late in July. On 1 August the 12th U. S. Army Group, later designated the Central Group of Armies, became operational under the command of General Bradley. Its two armies—the First, under Lt. Gen. Courtney H. Hodges, and the Third, under Lt. Gen. George S. Patton, Jr., totaling 13 infantry and 5¹ armored divisions,¹ had been assembled in the beachhead area. The Canadian First Army under General Crerar and the British Second Army under General Dempsey composed the 21st Army Group, later designated the Northern Group of Armies, commanded by Field Marshal Montgomery. These armies were still dependent on beachhead supply for their sustenance. Even with unseasonable bad weather which severely damaged and almost destroyed one of the two artificial port installations and halted unloading operations many times, an average of some 30,000 tons of supplies and 30,000 troops were handled every day. These achievements, without precedent in history, were not anticipated by the German defenders and, consequently, their plans for the defense of the French coast had not taken them into account.

¹ U. S. Divisions in France, 27 July 1945, Infantry: 1st, 2d, 4th, 5th, 8th, 9th, 28th, 29th, 30th, 35th, 79th, 83d, 90th; Armored: 2d, 3d, 4th, 5th, and 6th.

General Bradley was able, on 25 July, to mount the offensive which broke out of the beachhead at St. Lo and Avranches and carried the lines swiftly forward to the Meuse River. Preceding the ground attack 1,500 heavy bombers and hundreds of other combat aircraft dropped more than 3,390 tons of bombs on enemy positions on a narrow front. The crushing power of the air attack and its paralyzing effect on the enemy's movement blasted the way for rapid penetration of German lines. While observing preparations for the attack, one of the Army's outstanding soldiers, Lt. Gen. Lesley J. McNair, was killed by misdirected bombs of our own air force. Though his loss was a tremendous shock to our divisions, which he had organized and trained, he undoubtedly died in the way he preferred--in battle. General McNair was utterly fearless.

The break-out gave General Eisenhower an opportunity to deliver mighty blows at the shaken enemy. At the height of this action he wrote:

My entire preoccupation these days is to secure the destruction of a substantial portion of the enemy forces facing us. Patton's Third Army, on the marching wing of our forces, is closing in as rapidly as possible. His deployment through the bottleneck near Avranches was exceedingly difficult but we have now got the strength on that wing to proceed definitely about our business. We have detached only one corps for the conquest of the Brittany Peninsula so as to have the maximum forces for the main battle. Within a week there should be real developments on the present front.

He seized his opportunity, directing a vigorous pursuit of the shattered German forces. There followed a campaign which for speed and boldness has few parallels. Following the First Army's break-through, the Third Army, under General Patton, utilizing a heavy preponderance of armor, thrust forward from the Avranches breach on 2 August and cut off the Brittany Peninsula by 6 August, isolating the bulk of the 2d Parachute and 265th, 266th and 343d German Infantry Divisions. The next move was to establish a southern flank along the Loire to protect our main effort heading eastward against attack from the south. These were preparatory moves. While they were in progress, General Hodges' First Army and the British Second Army were repulsing and crushing heavy attacks which the enemy launched in the desperate hope of driving a wedge to the sea through Avranches to cut off General Patton's forces.

On 13 August the Third Army swept north from Le Mans around the southern flank of the German Normandy position in the direction of Argentan.

Simultaneously, Canadian forces of the British Second Army drove south from Caen toward Falaise. This pincers movement created the "Falaise pocket," in which 100,000 enemy troops were captured, thousands more were killed or wounded, and thousands more thrown into disorder as they escaped toward the Seine through the "Falaise-Argentan corridor" held open by desperate German resistance. The Germans realized that the battle for Normandy was lost and they began withdrawing beyond the Seine under heavy pressure from both the ground and the air. The Seine crossings were raked by fighter patrols. Turning eastward from Le Mans and Argentan, the Third Army raced for the river with such speed that supply by air was often necessary to maintain its momentum. By the capture of Mantes on 18 August the German escape route was confined to crossings of the lower Seine northwest of Elbeuf.

Continental Envelopment

Meanwhile, on 15 August, operation ANVIL was executed by the U. S. Seventh Army under Lt. Gen. Alexander M. Patch in landings on the southern coast of France, which further weakened the fast-deteriorating position of the German Army in France. Preparations for this operation under the general supervision of the Supreme Allied Commander, Mediterranean Theater of Operations, had been under way, while the campaigns in Italy and Northern France were in progress. The very threat of such a landing had held substantial German forces of the First and Nineteenth armies immobilized in the south of France, preventing their deployment against our forces in Normandy. A naval force, comparable in size to the one which participated in the American landings in Normandy, had been assembled. An air offensive, conducted chiefly by the Allied Strategic Air Forces, prepared the way for the invasion by sustained attacks on vital enemy communications and installations in Southern France.

The Seventh Army landed southwest of Cannes in ideal weather. The area had been selected as the most favorable approach to the Rhone Valley. The landing force consisted of elements of General Truscott's VI Corps, our 1st Special Service Force, and French commandos. A British-American Airborne Task Force jumped astride the Argens River west of St. Raphael the night preceding the seaborne assault and seized the pass through which our forces would debouch. By 28 August the beachheads were firmly established and

the advance up the Rhone Valley was well under way.

The operations had been substantially aided by the efforts of the French underground. The landing of our VI Corps had been followed up immediately by the landing of divisions of the French I and II Corps of General de Tassigny's First French Army, which quickly captured Marseille and Toulon; by 1 September Nice had fallen. While the main force swept west to the Rhone, before moving northward, a task force from the American 36th Division under Brig. Gen. Frederic B. Butler headed directly north from the landing beaches through Gap, seized Grenoble and then turned northwest toward the Rhone to cut off the German columns retreating up the Rhone Valley. This drive into the rear of the German Nineteenth Army greatly facilitated the rapid advance of the main body of the VI Corps up the Rhone Valley. Lyon fell on 3 September and the advance northward continued unabated.

On 15 September other United States and French forces were combined into the 6th Army Group (later designated the Southern Group of Armies) commanded by Lt. Gen. Jacob L. Devers. He was succeeded as Deputy Theater Commander in the Mediterranean by Lt. Gen. Joseph T. McNarney, former Deputy Chief of Staff of the U. S. Army.

The Liberation of France

On 25 August the 2d French Armored Division of the First U. S. Army entered Paris, as the battered remnants of the German army which had defended the Normandy coast fell back north of the Seine. The Germans had suffered at least 400,000 casualties, of which more than 200,000 were prisoners of war. The units which had escaped destruction were forced to abandon the major portion of their equipment.

As the enemy withdrew he had left behind substantial garrisons to defend the critical seaports: Brest, St. Nazaire, Lorient, Dieppe, and LeHavre. In order to prevent the Allies from developing harbor facilities to sustain the advance of the gathering millions, the Germans freely expended thousands of men to make the supply problem difficult if not impossible of accomplishment.

Despite these obstructions, by 5 September (D+90) 2,086,000 Allied troops and 3,446,000 tons of stores had been put ashore in France. This was an outstanding logistical achievement, but nevertheless we were still in urgent need of additional ports if we were to support

adequately the fast-moving offensive across France that was operating on a dangerously thin supply basis. Many divisions had a very limited supply on hand.

On 5 September the Ninth U. S. Army under the command of Lt. Gen. William H. Simpson began operations under the 12th Army Group for the reduction of Brest and other French ports, where four German divisions were bottled up. Dieppe fell on 31 August; LeHavre on 11 September; Brest on 19 September. The most strenuous efforts were made to put these ports into operating condition. Tonnage began moving through Dieppe on 7 September and through Le Havre on 9 October. Brest was too heavily damaged and too distant from future fields of operations to justify immediate reconstruction.

The defeated German armies now were streaming across France, heading for the shelter of the Siegfried Line. They were under constant air attack. On the ground General Bradley's First and Third Armies, driving northeast from Melun and Troyes reached the Aisne and the Marne, sweeping aside the German rear guards. Field Marshal Montgomery's forces crossed the lower Seine, invested LeHavre, and pushed on to the Somme. On crossing the Aisne, the 7th Corps of the First Army turned northward and raced on to Mons in a brilliant stroke that cut off five of the retreating German divisions. The pocket thus formed yielded over 22,000 prisoners with heavy additional losses of killed and wounded.

Overrunning Reims and Chalons, our Third Army pushed eastward, nourished often by air supply, and by 7 September had reached the line of the Moselle from Nancy to the vicinity of Metz. On 11 September elements of the Third Army contacted Seventh Army columns northwest of Dijon. Four days later the 6th Army Group passed to operational control of Supreme Headquarters, Allied Expeditionary Forces, severing its fighting connection with the Mediterranean theater, though its supply was continued for some time from Italy. On 16 September approximately 20,000 occupational troops of the German Army from the Biscayne Bay area, moving northeastward toward Germany, surrendered to the commander of the U. S. 83d Division southwest of Orleans.

To the north, our First Army had crossed the Belgian frontier on 2 September, captured Liege on the 8th, crossed Luxembourg, and entered Germany on the 11th. The enemy had been kept completely off balance. As the Allies approached the German border, supply lines were stretched to the limit and the march-

ing columns of the armies were maintained only by the full use of air transportation, fast double-lane, one-way track routes, such as the famous Red Ball Express from the Normandy beaches to Paris, and other emergency measures. Logistical difficulties now began to slow down the advance. Time was needed for the opening of additional ports and for the relaying and repair of hundreds of miles of French railroads.

The following extract from a report by General Eisenhower indicates the severity of the campaign in France and illustrates the tremendous needs of our armies during this campaign, in addition to the routine consumption of huge quantities of gasoline and rations:

Losses of ordnance equipment have been extremely high. For instance, we must have as replacement items each month 36,000 small arms, 700 mortars, 500 tanks, 2,400 vehicles, 100 field pieces. Consumption of artillery and mortar ammunition in northwestern Europe averages 8,000,000 rounds a month. Our combat troops use up an average of 66,400 miles of one type of field wire each month. (The AEF during the entire First World War expended less than 10,000,000 rounds of artillery and mortar ammunition.)

The British 21st Army Group liberated Brussels on 3 September and Antwerp the next day. They crossed the Dutch frontier on 12 September and by the 15th the Channel coast was cleared as far north as Zeebrugge with the exception of the isolated enemy forces holding out in key ports.

On 9 September 1944 General Eisenhower reported:

The hostile occupation in force of the Dutch Islands at the mouth of the Schelde is certain to delay the utilization of Antwerp as a port and thus will vitally influence the full development of our strategy.

Again on 21 September he wrote:

Right now our prospects are tied up closely with our success in capturing the approaches to Antwerp. All along the line maintenance is in a bad state—reminiscent of the early days in Tunisia—but if we can only get to using Antwerp it will have the effect of a blood transfusion.

The efforts of the British forces on the north flank were to be devoted for several weeks to clearing the enemy from these islands. After bitter fighting involving heavy losses, featured by river crossings and amphibious landings, the last of the positions was cleared on 9 November. By 27 November the port of Antwerp was in operation but under heavy fire of the vicious German V-weapons which fell at one time at the rate of one every 12½ minutes and caused thou-

sands of Allied civilian and military casualties and cast grave doubt for a time as to the advisability of continuing the operation of the port.

The ports of southern France were vital to the U. S. Seventh Army and the French First Army in the Southern Group of Armies. Toulon and Marseille were in operation late in September. Since then 14 divisions were moved through Southern French ports, in addition to an average daily unloading of over 18,000 tons of supplies. Two railways were placed in early operation, including the double-track main line through Lyon and Dijon, and thousands of tons of supplies moved daily over these lines and by truck to forward railheads. Port capacities and transportation facilities were sufficient to meet the requirements of the entire Southern Group of Armies and also to assist in the supply of the Central Group of Armies until the stubborn defense of the water entrance to Antwerp was reduced.

After the port of Antwerp became operational, it handled on an average of over 25,000 tons of stores daily, despite the V bombs. This tremendous increase in our over-all port capacity made it unnecessary to devote more precious time and manpower to reopen the shattered ports in Brittany, which, although now in our hands, were much more distant from the front lines than Antwerp.

Having overcome the acute shortage of port facilities, the primary bottleneck in the supply line then became transportation from the port supply dumps to the front lines. To improve this situation our Engineers, Transportation Corps, and other supply troops in Lt. Gen. J. C. H. Lee's communications zone performed miracles in repairing and building railways, operating large high-speed truck convoys, and extending fuel pipelines from the ports and terminals of 16 cross-Channel pipelines to the forward areas. At one time 70 miles of pipe were being laid in a single day.

The Westwall

As the Siegfried Line was approached, and the port and enlarged transportation facilities became adequate, General Eisenhower advised the War Department that tactical plans for the final assault of this fortification required greater ammunition resources than those provided, and requested a maximum production effort in the United States. He forecast the expenditure of some 6,000,000 artillery and 2,000,000 mortar shells monthly in order to reduce the Siegfried Line. In this country

an urgent demand was made for maximum production; fast rail and water transportation was utilized to make shipments direct from the production lines to the gun positions, and rationing to less active theaters, as well as stabilized fronts in the European theater itself, became rigid. Only by these measures was it possible to serve the thousands of guns behind the major assault efforts and secure an adequate supply of ammunition for the final battles against Germany.

Field Marshal Montgomery struck through the air at the northern flank of the Siegfried Line on 17 and 18 September. The U. S. 82d and 101st and one British airborne division, all elements of Lt. Gen. Lewis H. Brereton's newly formed First Allied Airborne Army, landed in Holland astride the Meuse, Waal, and Lower Rhine rivers in the Eindhoven-Arnhem area. This was the largest airborne operation ever attempted, requiring the employment on the first two days of 2,800 planes

THE MOUNTAIN AREA
The mountain area of the Great Smoky Mountains National Park, Tennessee, is a beautiful area of rugged mountains, dense forests, and scenic views. The mountains are covered in dense forests of hardwood and softwood trees. The views are spectacular, with mountains rising steeply from the valleys. The area is a popular destination for hikers and nature lovers.

and over 1,600 gliders. Several airborne operations had been planned for the period following the break-through in Normandy, but so rapid was the Allied advance that events overtook the plans in each instance. The operation in Holland achieved only partial success. The American 82d and 101st Airborne Divisions, landing near Eindhoven, seized crossings of the Meuse and Waal Rivers. The British Second Army was able to establish contact with these divisions after the second day. The important bridgeheads were held in the face of desperate German counterattacks. The British airborne division, landing in the more remote and exposed Arnhem area north of the Lower Rhine, was subjected to concentrated attacks by superior enemy forces. It was finally forced to withdraw south of the river.

Meanwhile, to the south, our First Army was forcing its way into Germany. Aachen was strongly defended, and a bitter battle ensued before it fell on 21 October. On 3 October the Ninth Army had been brought up from the western coast of France and entered the line between the First and Third Armies. Then on 23 October the Ninth Army was moved to the northern flank of the First Army above Aachen. By the end of November the Third Army, driving toward the Saar, had reduced the formidable Metz area and the defenses along the Moselle and Seille Rivers. A Southern Army Group offensive into Alsace-Lorraine brought the 2d French Armored Division of the U. S. Seventh Army to Strasbourg on the Rhine in late November and the First French Army to the river between Mulhouse and the Swiss border. Between the two armies remained a sizable portion of the Alsace known as the Colmar pocket.

During the third week in September the Combined Chiefs of Staff were again in conference at Quebec with President Roosevelt and Prime Minister Churchill. The whole of Northern France and substantial parts of Belgium and Luxembourg were in Allied hands. But General Eisenhower reported that enemy resistance was stiffening as he approached the German frontier. He reported that it was his intention to prepare with all speed to destroy the German armies in the west and occupy the German homeland. He considered that his best opportunity to defeat the defenders in the west was to strike at the Ruhr and Saar, confident the enemy would be compelled to concentrate most of his available resources in defense of these essential areas. He preferred the northern approach

into Germany through the Cologne plain for reasons which the map makes obvious.

Early in October I made a hurried 9-day inspection trip to the Western Front, visiting American corps and divisions from the Vosges Mountains north to Holland. At that time many of the infantrymen had been in almost constant combat since D-day in June. After many computations and exchanges of radio messages with the War Department to determine the effect on our hard-pressed and delicately balanced shipping situation, it was decided to rush the movement from the United States of the infantry regiments of 9 of the 11 remaining divisions ahead of the scheduled departures of the entire divisions. This was for the purpose of relieving those regiments which had been in combat for an excessively long period and to give immediate increased strength and striking power to our armies facing a most difficult winter campaign.

With the promise of a large increase of supplies through the port of Antwerp in late November, and with more than 3,000,000 troops on the Continent, General Eisenhower in mid-November launched a charging offensive to penetrate the Siegfried Line and place himself in position to cross the Rhine.

Not in years had European weather been so unfavorable for grand-scale military operations. Resistance was bitter. The Siegfried defenses were formidable as anticipated, and our divisions paid heavily for each inch of ground they tore from the fanatical Nazi defenders. Nevertheless, by 4 December the Second British Army had cleared the west bank of the Meuse and the Ninth Army had reached the Roer. East of Aachen troops of the First Army fought splendidly through bloody Hurtgen Forest, taking heavy casualties and inflicting heavy losses on the stubborn enemy. The dams of the Roer were seriously inhibiting General Eisenhower's progress. He wrote:

He (the enemy) is assisted in that area, however, by the flooded condition of the Roer River and the capability he has of producing a sudden rush of water by blowing the dams near Schmidt. Bradley has about come to the conclusion that we must take that area by a very difficult attack from the west and southwest.

There can be no question of the value of our present operations. The German is throwing into the line some divisions with only six weeks training, a fact that contributes materially to his high casualty rate. As explained in my most recent appreciation to the Combined Chiefs of Staff, our problem is to continue our attacks as long as the results achieved are so much in our favor, while at the same time preparing for a full-out heavy offensive when weather conditions become favorable,

ARDENNES COUNTEROFFENSIVE

assuming the enemy holds out. Unless some trouble develops from within Germany, a possibility of which there is now no real evidence, he should be able to maintain a strong defensive front for some time, assisted by weather, floods, and muddy ground.

The Wehrmacht's Last Blow

General Eisenhower was determined to give Germany no chance to recoup from the blows already delivered. Despite shortages in troops and supplies, his attitude was offensive, and, consequently, he was compelled to hold some sectors of the front with comparatively weak forces in order to gather strength at his points of attack. To the 75 miles between Monschau and Trier he could assign only four divisions of the First Army, or sacrifice his effort to bring about a decision elsewhere. It was here that the German armies of the west, commanded by Field Marshal von Rundstedt and acting on the direct orders of Hitler, made their last desperate effort to stave off the disaster.

On 16 December von Rundstedt attacked with a force of 24 divisions. He had been able, because of heavy fog which continued for days, to assemble his forces in secrecy in the heavily forested foreground. When the blow came, eight panzer divisions broke through our VIII Corps line on a 40-mile front. Diversionary attacks in other sectors and considerable air and artillery support assisted the main offensive in Luxembourg.

General Eisenhower reacted promptly and decisively and subsequent results have proved the eminent soundness of his plan. All available reserves in the Central Army Group were used to strengthen the northern and southern flanks of the penetration and the XXX British Corps of the Northern Army Group was deployed to hold the line of the Meuse and the vital Liege area. With communications seriously disrupted, Field Marshal Montgomery was charged with the operation of forces north of the penetration, involving temporary operational control over most of the U. S. First and Ninth Armies while General Bradley coordinated the effort from the south. The 82d and 101st Airborne Divisions were brought up from theater reserve to retard the momentum of the enemy thrust, with the 101st, reinforced by armor and artillery, holding the important road center at Bastogne. The shoulders of the penetration at Monschau and Echternach were stubbornly held by infantry divisions moved in from the

north and from the south, outstanding among which were the 1st, 2d, 4th, and 99th Divisions.

The Ardennes battle deserves a prominent place in the history of the U. S. Army. The splendid stand of the 7th Armored Division at St. Vith, the tenacity of the 101st Airborne and elements of the 10th Armored Division at Bastogne, and the numerous examples of superb fighting qualities shown by the troops of other units were in the finest American tradition.

The tide of battle began to turn when the U. S. Third Army brought its full weight to bear on the southern flank of the salient, where General Patton stopped the advance of the German columns with available reserves and was attacking on a two-corps front by 22 December with the III and XII Corps. This shift from an offensive across the Saar to a general attack in southern Luxembourg was a brilliant military accomplishment, including corps and army staff work of the highest order. Elements of the 5th Division which were fighting in the-Saar bridgehead on the morning of 20 December moved 69 miles, and were in contact with the enemy north of the Sauer River by nightfall.

General Devers' 6th Army Group was required to assume responsibility for the entire front from Saarbrücken south, adding over 25 miles to its already extended front. In order to defend this front adequately, full use was made in the Seventh Army of the infantry regiments of three divisions which were just arriving in the theater from the United States in advance of their division headquarters and supporting troops.

The weather ceased to favor the enemy between 23 and 26 December, permitting our overwhelming tactical air forces to strike terrific blows at the German armor and supply columns. On 26 December the 4th Armored Division relieved encircled Bastogne. The crisis had passed, for by this time the German salient was being assaulted from the north, west, and south. At the points of extreme penetration, the enemy had driven more than 50 miles into the American lines, but he was unable to shake loose our valiant units fighting desperately to hold the critical shoulders of the bulge. The depth of his advance was accordingly limited and it was possible to interdict by artillery fire all the important supply roads for the leading troops at the tip of the salient.

The reduction of the Ardennes salient involved our First and Third Armies in heavy fighting under severe winter conditions, but progress was steady and by the end of January the bulge was eliminated at a

cost which later proved fatal to the enemy. In the single day of 22 January, the air force destroyed or damaged more than 4,192 pieces of heavy equipment, including locomotives, rail cars, tanks, and motor and horse-drawn vehicles.

The Germans gained an initial tactical success and imposed a delay of about six weeks on the main Allied offensive in the north, but failed to seize their primary objectives of Liege and Namur. They lost 220,000 men, including 110,000 prisoners, and more than 1,400 tanks and assault guns. The operation was carried out by the Fifth and Sixth Panzer Armies, supported by the Seventh Army, thus stripping the Reich of all strategic reserves and seriously depleting the resources required to meet the powerful Soviet offensive in January.

"Possibly more serious," reported General Eisenhower, "was the widespread disillusionment ensuing from the failure to seize any really important objective and the realization that this offensive for which every effort had been brought to bear and on which such great hopes were pinned, had in no sense achieved anything decisive."

In mid-January the Second British Army launched an attack in the Sittard area and within a fortnight reached the Roer Valley, 10 miles inside the Reich. Regrouping of the Allied armies for further offensive action proceeded during January.

In an effort to divert the punishing blows from his forces withdrawing from the Ardennes, the enemy attacked in the Bavarian Palatinate. Here there was ground to give, and the U. S. Seventh Army withdrew to the Maginot defenses west of the Rhine, permitting the detachment of divisions for the heavy fighting in the Bulge.

Closing The Rhine

On 20 January the First French Army launched an attack in the southern Alsace to destroy the enemy's forces in the Colmar pocket and clear the west bank of the Rhine. The operation involved a drive through Colmar by the American XXI Corps, commanded by Maj. Gen. F. W. Milburn, and simultaneous attacks by forces of the First French Army under General de Tassigny from the Mulhouse area. The climax of the battle was a night assault on the bridgehead town of Neuf-Brisach by infantry of the U. S. 3d Division using assault boats and scaling ladders on the moats and walls of the fortified town, very much after the fashion of mediæval battles. After this aggressive action, the German position in the Alsace rapidly deteriorated and by 9 February the Allies held a loosely defended line along

the west bank of the Rhine from Strasbourg to the Swiss border, freeing troops for use in other sectors. The offensive in the Alsace cost the Germans more than 25,000 men.

The reduction of the Colmar pocket and the seizure of the Roer River dams to the north in the vicinity of Schmidt were both necessary preludes to clearing the enemy from the west bank of the Rhine and a full-scale drive into the heart of Germany. The U. S. First Army now attacked toward Schmidt while the Third Army threw its weight against the Siegfried Line in the Prüm-Trier area. By 10 February the First Army had obtained control of the Erft and the Schwammenauel dams, and the following day had cleared the entire west bank of the Roer. Although failing to prevent the flooding of the Roer Valley, this action forced the Germans to release the waters at a time when our operations would not be endangered, thus removing the most serious threat to General Eisenhower's plan for the invasion of northern Germany.

The Combined Chiefs of Staff met at Malta in early February preliminary to a meeting with President Roosevelt, Prime Minister Churchill, and Marshal Stalin in the ARGONAUT Conference at Yalta a few days later. En route to the Conference, I met General Eisenhower briefly at a secret rendezvous near Marseilles where we discussed his future plans that were later approved at Malta, providing for the closing of the Rhine, the destruction of enemy forces west of the river, the seizure of bridgeheads across the river in the north and south and coordinated drives into the heart of Germany. At Yalta the general plan for the final destruction of Nazi Germany was established.

In executing General Eisenhower's plan, a coordinated drive by the First Canadian Army from the Nijmegen bridgehead along the watershed between the Meuse and the Rhine was necessary and an attack by the U. S. Ninth Army across the Roer toward Dusseldorf was to follow shortly afterward. On 8 February the First Canadian Army began its attack following a heavy air and artillery preparation. Initially, the Canadian advance was rapid, but flooded terrain delayed the start of the Ninth Army attack, permitting the enemy to concentrate against the Canadians.

In preparation for the Ninth Army offensive, the Tactical and Strategic Air Forces flew almost 10,000 sorties on 22 February, covering rail and transportation targets throughout the length and breadth of Germany. These blows from British, French, and Italian bases

were designed to paralyze the German rail system and isolate the Western Front. The next day the Ninth Army attack was launched and, although there was some delay in establishing bridgeheads over the flooded Roer, the general progress was quite rapid. By 1 March Roermond and Munchen-Gladbach were captured and the following day the armored columns reached the Rhine north and south of Dusseldorf. Meanwhile, in the Prüm-Trier area, the Third Army drove across the Our and Sauer Rivers, capturing Prüm on 13 February. Successive bridgeheads were established across the Saar and the Kyll Rivers and on 2 March Trier fell to our troops. From the launching of the operations on 8 February to 1 March more than 66,000 German prisoners were captured by the Northern and Central Army Groups.

The Watch That Failed

Advancing on the right of the Ninth Army, the First Army captured the ruins of Cologne on 7 March against stout resistance. On the same day elements of its 9th Armored Division, probing to the Rhine further south, found the Ludendorff Bridge at Remagen intact and immediately crossed to the east bank, developing a small bridgehead. Such a windfall had been hoped for but not expected. The prompt seizure and exploitation of the crossing demonstrated American initiative and adaptability at its best, from the daring action of the platoon leader to the Army commander who quickly redirected all his moving columns in a demonstration of brilliant staff management. He established powerful elements across the river immediately in accordance with direct orders from General Eisenhower. The bridgehead provided a serious threat to the heart of Germany, a diversion of incalculable value both to the main effort in the Ruhr and to the reduction of the Saar-Palatinate. It became a springboard for the final offensive to come.

In the meantime, the Third Army was forcing its way through the rugged Eifel hills. By 7 March, constant pressure had crushed the German front north of the Moselle. General Patton's armor broke out and dashed forward to the Rhine near Koblenz on the 9th. Contact was established with General Hodges' First Army units southeast of Remagen, and by 11 March the Allies controlled the west bank of the Rhine from Nijmegen in Holland to its junction with the Moselle at Koblenz.

Once the Eifel sector had been mopped up, General Patton was ready to assist the Seventh Army in reducing the Saar pocket. General Eisenhower wrote me:

Tomorrow morning the XX Corps of Patton's Army begins a local attack in the Trier area as a preliminary to the general attack by Seventh Army on the 15th. So far as we can determine there is not a single reserve division in this whole area. If we can get a quick break-through, the advance should go very rapidly and success in the region will multiply the advantage we have secured in the bridgehead at Remagen. It will probably be a nasty business breaking through the fortified lines, but once this is accomplished losses should not be great and we should capture another big bag of prisoners. I have given Seventh Army 14 divisions for their part of the job, and XX Corps (Third Army) jumps off with four. Patton will throw in another subsidiary effort from north to south across the Moselle with about four to five divisions.

On 14 March General Patton established a bridgehead across the Moselle, southwest of Koblenz. The following day his troops lunged southward from the Moselle bridgehead, other Third Army forces drove east from Trier, and the Seventh Army attacked northward between Saarbrücken and the Rhine. Despite dense mine fields and the formidable Siegfried Line fortifications, the Seventh gained steadily, pinning down strong enemy formations and leaving the Third Army tanks free to cut to pieces the rear of the German position. On 16 March a spearhead of the 4th Armored Division broke through for a gain of 32 miles and seized two bridges across the Nahe River south of Bad Kreuznach. From this point on, resistance south of the Moselle crumbled. Armored divisions of the Third and Seventh Armies enveloped the Saar, and the Rhine cities of Worms and Mainz fell to our swift columns.

While pocketed German forces in the Saar were still in process of being mopped up, Third Army infantry of the Corps under Maj. Gen. Manton S. Eddy, achieved a brilliant surprise by crossing the Rhine at Oppenheim south of Mainz late on 22 March with decidedly sketchy and improvised means. In two days this bridgehead was expanded to a width of 15 miles, and on the third day the 4th Armored Division broke through the enemy lines to a depth of 27 miles, seizing an undamaged bridge over the Main River. The daring armored thrusts in the Saar had criss-crossed and intermingled elements of the two armies. Under the skillful direction of General Bradley and General Devers, the Army commanders regrouped their mingled corps and divisions without loss to the momentum of the offensive.

The Knockout

In six weeks the combined efforts of the Allied armies had achieved a major objective. The German soil west of the Rhine had been cleared of all hostile forces. The river itself had been forced in two fortuitous crossings, and the freedom of action of the German defense on the east bank was seriously curtailed. General Eisenhower was now ready to launch his offensive beyond the Rhine.

Several considerations governed the selection of the area north of the Ruhr for the main effort. A drive in this sector was the quickest means of denying what vestiges remained of the once rich Ruhr industries to the enemy. That stretch of the Rhine between Emmerich and Wesel was one of the two best sites for a forced crossing, and the Germans had brought up only relatively inferior forces to oppose such an operation. Once across that river the gently rolling terrain north of the Ruhr was most suitable for mobile and tank operations, the type of warfare it was desired to force upon the enemy because of his shortages in tanks, vehicles, and motor fuel.

After a heavy aerial and artillery preparation, the Second British Army began an assault crossing of the Rhine during the evening of 23 March. Next morning, the U. S. 17th and the 6th British Airborne Divisions were dropped north and northeast of Wesel. British troops crossing the river soon established contact with the airborne forces. The U. S. Ninth Army crossed between Wesel and Duisburg early on the 24th, meeting light to moderate resistance. Within two days seven bridges had been built across the river and the British-American bridgehead stretched 25 miles along the Rhine to a maximum depth of 6 miles.

General Eisenhower was with the Ninth when it jumped off. He described the attack in a letter:

I have just finished a rapid tour of the battle front. Yesterday and the day before I was with the Ninth Army to witness its jump-off and the early stages of the Rhine crossing. Simpson performed in his usual outstanding style. Our losses in killed, during the crossing, were 15 in one assault division and 16 in the other. I stayed up most of one night to witness the preliminary bombardment by 1,250 guns. It was an especially interesting sight because of the fact that all the guns were spread out on a plain so that the flashes from one end of the line to the other were all plainly visible. It was real drumfire.

I have noted so many unusual and outstanding incidents in the forward areas that it would almost weary you to tell you of the fine performances of American and other troops.

BATTLE OF GERMANY

For example, the Engineers of VII Corps laid a Treadway bridge across the Rhine in 10 hours and 11 minutes. While not actually under fire, this job was done under battlefield conditions with all the necessary precautions taken to prevent unusual damage by a sudden concentration of enemy artillery fire. It was a brilliant performance.

During the critical week ending 22 March, United States aircraft alone made 14,430 heavy bomber attacks, 7,262 medium bomber attacks, and 29,981 fighter sorties against targets in Europe.

By 25 March hard fighting in the Remagen area had extended the bridgehead to a depth of 10 miles and a length of over 30. The German High Command, expecting an immediate drive on the Ruhr from this direction, had concentrated strong forces of Army Group "B" north of the Sieg River. To their great surprise, General Hodges broke out of the bridgehead to the southeast on 26 March, when his armor drove to Limburg, seized a bridge over the Lahn River, and raced along the superhighway toward Frankfurt. Other armored columns of the First Army, speeding eastward as fast as 40 miles a day, reached Marburg and Giessen by 28 March, and then swung northward through the hill country west of Kassel. Troops of the Third Army crossed the river at Mainz to reduce the German pocket bypassed between Mainz and Frankfurt while, to the east, other Third Army forces drove on toward Kassel and the line of the Fulda River. With solid contact between their advancing corps, the First and Third Armies were now executing a massive thrust to the northeast into the heart of Germany. The complete rout of the German military establishment was now under way.

In the sector of Field Marshal Montgomery's Northern Army Group, the U. S. Ninth Army pressed into the northwest section of the Ruhr. Still further to the north, resistance on the right flank of the British Second Army slackened considerably toward the end of March, and armored troops broke through to Dulmen. Meanwhile, on the left flank of the Second Army, the enemy withdrew, and British units crossed the Dutch border on a 30-mile front.

During the last week of March both of General Devers' armies in the south crossed the Rhine. The Seventh sent the XV Corps, commanded by Maj. Gen. W. H. Haislip, across on a 15-mile front between Gernsheim and Mannheim. Our troops took Mannheim and advanced 25 miles east of the Rhine. The II Corps of the First French Army crossed the Rhine

near Gernersheim and established contact with the Seventh Army south of Heidelberg. By 1 April, French troops had advanced 18 miles.

The magnitude of the offensive smothered resistance all along the Western Front. The shattered condition of the German transport system and the sustained speed of the Allied advance prevented the enemy from coordinating a defensive line in any sector. He did offer bitter resistance at isolated points but these were bypassed by the armored columns, leaving pockets to be mopped up later. During the month of March nearly 350,000 prisoners were taken on the Western Front.

The entrance of the Fifteenth Army, under command of Lt. Gen. L. T. Gerow, into the line of the 12th Army Group on 30 March gave more freedom of action to the First and Ninth Armies, enabling them to increase the weight of the offensive into Germany. Ninth Army tanks immediately broke out of the area north of the Ruhr and swept eastward in a powerful thrust toward Münster. On 1 April the enveloping columns of these armies made contact west of Paderborn, cutting off the Ruhr and a large area to the south, in the largest pocket of envelopment in the history of warfare.

Elements of 18 German divisions from the First Parachute, Fifth Panzer, and Fifteenth Armies were encircled in this skillful maneuver. Leaving strong forces to contain and reduce this giant encirclement, the First and Ninth Armies continued eastward toward the line of the Weser. Spearheading the Allied offensive, they headed for Leipzig and a prearranged junction with the Soviet forces. There was no loss of momentum, no respite for the enemy forces, and by the end of the first week of April both armies had crossed the Weser in the area north of Kassel.

On 6 April, General Eisenhower wrote me:

As you can see from the reports, our plans have been developing almost in exact accordance with original conceptions. You must expect, now, a period in which the lines on your map will not advance as rapidly as they did during the past several weeks because we must pause to digest the big mouthful that we have swallowed in the Ruhr area. It should not take too long and, of course, in the meantime, maintenance will be pushed to the limit to support our next main thrust. My G-2 [Major General Strong of the British Army] figures that there may be 150,000 German soldiers left in the Ruhr but a number of these will change into civilian clothes before we liquidate the whole thing. He is confident, however, that we will capture at least 100,000. [Actually

300,000 were captured.] The enemy has been making efforts to break out of the area but our persistent policy of knocking out his communications to the eastward, and his lack of mobility within the pocket, both make it very difficult for him to launch a really concerted attack. I am confident that he can do nothing about it.

The Ninth Army advance from the Weser to the Elbe was featured by armored gains of 20 to 30 miles a day against little or no resistance. By mid-April our troops were along the Elbe near Wittenberge and Magdeburg and had established bridgeheads across the river. In rear of the armored columns, the cities of Hanover and Brunswick fell to Ninth Army infantry. Bypassing Leipzig and strong resistance in the Harz Forest, the First Army drove eastward to the Mulde Valley south of Dessau.

While these extensive operations continued, the battle progressed against the trapped Germans in the Ruhr. With the Fifteenth Army holding the west face of the pocket along the Rhine, and armor and infantry of the Ninth and First Armies driving in from the north, east, and south, the formidable enemy forces were crushed in just 18 days. More than 300,000 prisoners were taken in this unique victory, won far behind our forward positions and squarely astride our lines of communication.

Soon Leipzig and the Harz Mountains were in American hands, and the Ninth and First Armies closed on the line of the Elbe-Mulde, the forward limit, which had been arranged with the Soviets. To establish contact with our Allies from the Eastern Front, First Army patrols pushed east of the Mulde to Torgau, where the long-awaited juncture with the Red Army occurred on 25 April.

In the north, the British Second Army advancing on the Osnabrück-Bremen axis had crossed the Weser on a broad front near Minden early in April and was at the outskirts of Bremen by the middle of the month. From their Weser crossings the British struck northward toward Hamburg, reaching the Elbe southeast of the city. The Canadians forced the Ijssel River and pressed on through the Dutch towns, liberating the remaining sections of eastern and northern Holland.

Far to the south, the Third Army, after capturing Mühlhausen, Gotha, and Erfurt, crossed the Saale River and turned southeast toward the mountains of Czechoslovakia and the Danube Valley. This advance was designed to establish firm contact with the Soviet forces

in Austria and to prevent any effective reorganization of the enemy remnants in mountainous regions to the south. On the right, the Seventh Army encountered bitter resistance in Nürnberg, but quickly captured the city and then swung south into the Bavarian plain. On the first of May the Third Army was advancing into Czechoslovakia on a hundred-mile front southeast of Asch; along the Danube other elements had driven 20 miles into Austria. The Seventh Army had taken Munich, birthplace of the Nazi party, and was sweeping southward toward the Inn River. Along the upper Rhine, the First French Army captured Karlsruhe and Stuttgart in turn and proceeded with the reduction of enemy forces caught in the Black Forest. By the first of May the French had cleared the Swiss border west of Lake Constance and were driving into western Austria alongside the Seventh Army.

In northern Germany, the British Second Army, reinforced by the XVIII American Corps under Maj. Gen. Matthew B. Ridgway, broke out from the Elbe River late in April and reached the Baltic on 2 May. This action established contact with Soviet forces at Wismar and cut off the Danish Peninsula. Further resistance on this front was hopeless. On 5 May, the German commander surrendered all forces in north-west Germany, Holland, and Denmark.

Along the Danube, the Third Army continued the advance into Austria and entered Linz on 5 May. 'Next day Pilsen fell to our forces in Czechoslovakia. General Patch's Seventh Army swept across the Inn on a wide front and drove 40 miles to capture Salzburg and Hitler's stronghold at Berchtesgaden. Other Seventh Army troops who had taken Innsbruck drove through the Brenner Pass to establish contact with the Fifth Army at Vipiteno. Since its landing on the Riviera, the Seventh Army had advanced an average of more than 3 miles a day against what had been the most formidable army in the world. At noon on 6 May, Army Group "G," comprising all German forces in Austria, surrendered unconditionally to our Sixth Army Group, just 11 months after the landing in Normandy.

The powerful Wehrmacht had disintegrated under the combined Allied blows, and the swift advances into the mountains of Austria and Bohemia had prevented the establishment of an inner fortress. Surrounded on all fronts by chaos and overwhelming defeat, the emissaries of the German government surrendered to the Allies at Reims on 7 May 1945, all land, sea, and air forces of the Reich.

ORDER OF BATTLE EUROPEAN THEATER OF OPERATIONS (AS OF 7 MAY 1945)

[The order of battle of our Allies is not shown below Army level, except where American forces are under their operational control.]

Unit	Commander	Location
Supreme Headquarters Allied Expeditionary Forces	General of the Army, Dwight D. Eisenhower	Main Headquarters, Versailles, France.
		Advance Headquarters, Rheims, France

VICTORY OVER JAPAN

VICTORY OVER JAPAN

The Road To China

Of all the battle fronts of the global war, the situation in East Asia two years ago was the bleakest for the United Nations. In seeking to capitalize on the pre-occupation of the Western Powers in Europe and the sneak attack on the American fleet at Pearl Harbor, the Japanese had established an immense perimeter of conquest in the Far East. By July 1942 it extended more than halfway across the Pacific, southward almost to Australia, and westward to the mountain barriers of the India-Burma front. The advance eastward of the Japanese had been halted in the critical battles of Midway and the Coral Sea. But Japan still held tremendous areas replete with the natural resources essential to the conduct of modern warfare.

So far, our advance back over these areas taken by the Japanese in their initial stride had been slow and painful. It seemed to many Americans that if we had to repeat again and again the bloody struggles for Guadalcanal and the Papuan Coast of New Guinea by what was popularly termed "island hopping," the decision in the war with Japan was distant many years. Army and Navy commanders were well aware of the difficulties and paucity of means. Nevertheless, we had undertaken offensive operations in the Pacific and Far East with only the small forces then available because it was imperative that the Japanese be halted and placed on the defensive.

Japan's rush into Burma had isolated China except for the thin line of air supply over the 500 miles of the Himalayan Hump between Assam, India, and the Yunnan plateau. The Japanese had attacked China at the most propitious time for carrying out their dreams of conquest of Asia and Oceania. In the face of almost a complete lack of war matériel, China had refused to submit. But her condition by the early summer of 1943 had grown truly desperate.

China's most critical needs were in trucks and rolling stock, artillery, tanks, and other heavy equipment. It was impossible to fly this matériel over the Himalayas in the essential quantities. In fact, except as it supplied the American Fourteenth Air Force commanded by General Chennault with gasoline, bombs, and ammunition, the Hump air route at that time gave

China little material assistance. If the armies and government of Generalissimo Chiang Kai-shek had been finally defeated, Japan would have been left free to exploit the tremendous resources of China without harassment. It might have made it possible when the United States and Britain had finished the job in Europe, and assaulted the Japanese home islands, for the government to flee to China, and continue the war on a great and rich land mass.

The Combined Chiefs of Staff recognized that Germany had to be defeated first and that the quickest approach to Japan was across the Pacific, spearheaded by our Navy. Nevertheless, they believed that China must be given sufficient support to keep her in the war.

Accordingly, when this critical phase of the global war was discussed at Casablanca in January 1943, the Combined Chiefs directed that preparations be made to reestablish surface communications to China and to step up the flow of supply over the Hump even though at that time Allied resources were being heavily taxed to bring the North African campaign to a successful conclusion and to extend control over the Mediterranean. We knew they would be much more heavily taxed as we gathered our strength for the invasion of France.

At the TRIDENT Conference in Washington four months later the position of the Allies in Asia was reconsidered, and it was agreed that top priority must be given the Air Transport Command to increase the capacity of the aerial route over the Hump to 10,000 tons a month. It was also resolved that vigorous action must be taken to begin a Burma campaign in the fall at the end of the 1943 monsoon.

Three months later in the QUADRANT Conference plans were laid in greater detail to realize the maximum effect that could be obtained in Asia with the resources then available. The penetration into Burma from India was a task of unusual difficulty. Communications between the Port of Calcutta and Assam were limited to one railroad which changes from broad to meter gauge and which must cross the sweeping Brahmaputra River in ferries because the monsoon floods make bridging impossible. Nowhere

along the India-Burma frontier is there an easy west-to-east passage. The jungles that cover the barrier of the Himalayan foothills are malaria-ridden, infested with acute dysenteries and endemic typhus.

The United States and Great Britain had insufficient landing vessels even to give assurance of the success to the operations planned for the Mediterranean and Western Europe. It was impossible at that time to mount an amphibious attack on Burma from the south.

Operation CAPITAL

At the QUADRANT Conference the Southeast Asia Command was created under Admiral, the Lord Louis Mountbatten. Lt. Gen. Stilwell, who commanded the China-Burma-India U. S. Theater, was made his deputy. All the resources the United States could make available to him were allocated for the task of re-establishing land communications to China. It was urgently desired to furnish greater Allied resources in the East than were allotted. They simply were not available.

In the new command structure the Combined Chiefs of Staff continued to exercise general jurisdiction over operations in Southeast Asia and over the allocation of American and British resources. Operations in the Chinese theater of war were under the command of the Generalissimo, with Stilwell as his Chief of Staff. All Royal Air Force and Army Air Forces combat strength on the Burma front, including the U. S. Tenth Air Force, was formed into the Eastern Air Command under Maj. Gen. George E. Stratemeyer.

It was decided that an offensive in North Burma should be undertaken in the winter of 1943 and 1944, and that the Ledo Road from Assam, then under construction by American engineers, should be extended to the old Burma Road at Mongyu as rapidly as the offensive operations progressed. It was also decided to build a pipe line from Calcutta to Assam and another one paralleling the Ledo Road. These lines would greatly increase the flow of motor fuels to China.

At the same conference it was decided to enlarge the capacity of the Hump route to 20,000 tons a month. The plan for the bombing of the Japanese Islands by B-29's operating out of China was reviewed and accepted at the QUADRANT Conference. The air plan for the reduction of Japan, adopted at the conference, foresaw the establishment of superfortress

bases in the Pacific to subject Japan to the same devastating air attack that was to prepare Germany for assault by our ground forces. The target of the air route and new overland supply route to China established at this first Quebec conference, was 85,000 tons per month of general stores and 5,000 tons of petroleum products, which would move via the pipe line.

These decisions regarding the Ledo Road, the increase of Hump tonnage, the construction of pipe lines, and the campaign in North Burma generally presented a most difficult and trying problem to the Combined Chiefs of Staff. Ocean tonnage, transport planes for possible airborne operations to break the stalemate in Italy, an increase in the inflow of troops into the United Kingdom for OVERLORD, assistance for General MacArthur's campaign in the Southwest Pacific, and other urgent requirements all had to be taken into consideration in the light of our limitations in resources. Sacrifices would be required somewhere but if made at the wrong place they would cost the lives of Allied soldiers and delay final victory.

Since the operations in Burma could not begin until the monsoon had ended in Assam and the floods had receded, the Allied staff chiefs with the President and Prime Minister had the opportunity to meet with Chiang Kai-shek in Cairo in November 1943 before our projected offensive began. At the Cairo Conference the Combined Chiefs of Staff made further efforts to find the resources to increase the scope of the Burma campaign by adding amphibious operations in the Bay of Bengal. These resources were available nowhere in this world unless we abandoned the great basic decision to close with the German enemy in Western Europe in 1944. The alternative would have permitted the Japanese to exploit their prizes of conquest in the Pacific islands. It was determined, however, that by means of the projected Allied attacks across the India-Burma frontier, it would be possible to drive the Japanese from Northern Burma and achieve the objective of reopening surface communications to China.

The preliminaries to these operations began late in October just prior to the conference at Cairo and Teheran. The Chinese 22d and 38th Divisions moved from their forward positions in front of the advancing Ledo Road into the Hukawng Valley. These troops had been trained in the center established at Ramgarh, India, through the energy and wisdom of General Stilwell and with the approval of the Generalissimo.

In February the Chinese advances down the Hukawng Valley were joined by a specially trained American infantry combat team known as the GALAHAD Force commanded by Brig. Gen. Frank D. Merrill. These troops had been gathered in a call for volunteers that went to all United States jungle trained and veteran infantry units in the Pacific and in the Western Hemisphere. Marching over the most difficult terrain under intolerable weather conditions, the Chinese and American forces virtually destroyed the Japanese 18th Division, which had captured Singapore in the Japanese advance. In May 1944 they fought their way into the airfield at Myitkyina, the key to Northern Burma.

During most of this campaign the Japanese were effectively blocked from reinforcing Northern Burma through the Irrawaddy Valley by columns of seasoned British and Indian jungle troops, commanded by the late Maj. Gen. Orde C. Wingate. These columns were known as long-range penetration groups. Some of them marched from India to establish their strangleholds on Japanese communications; others were taken in by glider in an airborne operation directed by U. S. Col. Philip G. Cochran, who commanded a specially organized composite air group known as Air Commandos. While General Stilwell's forces were advancing on Myitkyina troops of the Generalissimo commanded by Marshal Wei Li Haung crossed the Salween River from the east.

Patrols of the two forces finally met at Tengchung in the summer of 1944, establishing the first thin hold on Northern Burma.

During the fall of 1943 the Japanese, anticipating the attack in Burma, had been building their strength for a counteroffensive to prevent the reestablishment of surface communications with China. Japanese forces attacked eastward across the Salween in the Lungling area and were met and stopped by the Chinese in time to permit completion of the road from Ledo. Another strong Japanese force struck toward India while the Allied operations were in progress in an effort to seize the large British base at Imphal and sever the Bengal-Assam Railroad below the bases on which Hump air transportation and General Stilwell's operations were dependent. By April 1944 Imphal was cut off and the Japanese threatened Dimapur on the railroad. British and Indian troops flown to the sector met the attack, turned it back, and reestablished contact with the Indian divisions in the

Imphal plain. After heavy and prolonged fighting, the hostile divisions were dispersed and cut up with heavy losses. At the same time, British and Japanese troops in the Arakan to the south were engaging in see-saw fighting along the coast of the Bay of Bengal.

The reentry into Burma was the most ambitious campaign yet waged on the end of an airborne supply line. From the first advance by the Chinese into the Hukawng Valley in October until after the fall of Myitkyina town the next August there were at all times between 25,000 and 100,000 troops involved in fighting and dependent largely or entirely on food, equipment, and ammunition that could be air-supplied, either by parachute, free drop, or air-landed.

The air supply was maintained by troop carrier squadrons, British and American, commanded by Brig. Gen. William D. Old, under the direction of General Stratemeyer's Eastern Air Command. Night and day troop carrier C-46's and 47's shuttled from numerous bases and air strips in the Brahmaputra Valley to points of rendezvous with the Allied ground columns in the Burma jungles. Each trip had to be flown over one or more of the steep spines which the Himalayas shove southward along the India-Burma frontier to establish one of the most formidable barriers to military operations in the world. The troop carrier squadrons at the height of the campaign averaged 230 hours of flying time for each serviceable plane a month for three months. The normal average monthly flying time is 120 hours.

At two critical stages of the campaign the troop carrier squadrons assisted by Air Transport Command planes made major troop movements in a matter of hours and days that would have required weeks and months by surface transport.

The first was the movement of British and Indian troops to meet the threat on the Bengal-Assam Railroad at Dimapur. The second was the movement of two Chinese divisions, the 14th and 50th, from Yunnan, China, across the Hump to the troop carrier base at Sookerating, in Assam, India. This operation was accomplished in just eight days. The Chinese troops were picked up by Air Transport Command planes in China and landed at the troop carrier field where they were entirely refitted, armed, and flown to a staging area in the Hukawng from where they entered the battle for Myitkyina.

Only by air supply was the Burma campaign at all possible. The jungle covered ridges between India and Burma have effectively resisted the advance of

civilizations. They are inhabited by mountain tribes of Kachins, Chins, and the headhunting Nagas. Before United States Engineers accomplished the Herculean job of driving the Ledo Road, now known as the Stilwell Road, across the mountains and through the jungles, a road from the Brahmaputra to the Irrawaddy Valley was considered an impossibility.

Fall of Burma

The mission that the Joint Chiefs of Staff had given General Stilwell in Asia was one of the most difficult of the war. He was out at the end of the thinnest supply line of all; the demands of the war in

Europe and the Pacific campaign, which were clearly the most vital to final victory, exceeded our resources in many items of matériel and equipment and all but absorbed everything else we had. General Stilwell could have only what was left and that was extremely thin. He had a most difficult physical problem of great distances, almost impassable terrain, widespread disease and unfavorable climate; he faced an extremely difficult political problem and his purely military problem of opposing large numbers of enemy with few resources was unmatched in any theater.

Nevertheless General Stilwell sought with amazing vigor to carry out his mission exactly as it had been stated. His great efforts brought a natural con-

flict of personalities. He stood, as it were, the middleman between two great governments other than his own, with slender resources and problems somewhat overwhelming in their complexity. As a consequence it was deemed necessary in the fall of 1944 to relieve General Stilwell of the burden of his heavy responsibilities in Asia and give him a respite from attempting the impossible.

At the same time it became obvious the mission of reestablishing communications with China would be accomplished, and as the future objectives of the forces in Southeast Asia and China were to grow continually more divergent, it appeared advisable to make a clear division of the two theaters. Accordingly, the American administrative area of China-Burma-India was separated into the India-Burma and the China theaters. Lt. Gen. Daniel I. Sultan, who had been General Stilwell's deputy, was given command of the India-Burma theater. Maj. Gen. Albert C. Wedemeyer, formerly Chief of the War Department Strategic Planners and later a member of Admiral Mountbatten's staff, was appointed commander of our forces in China, succeeding General Stilwell as the Generalissimo's Chief of Staff.

No American officer had demonstrated more clearly his knowledge of the strength and weakness of the Japanese forces than General Stilwell and the steps necessary to defeat them in Asia. He was brought back to the United States to reorient the training of the Army Ground Forces for the war against Japan. Then after the death of General Buckner on Okinawa he was returned to the field to command the U. S. Tenth Army.

The Burma campaign continued with intensity during the monsoon season of 1944. Chinese, American, and British troops were then disposed along the Chindwin River north of Kalewa and from the upper Irrawaddy to Lungling. It was planned to drive southward through Central Burma to Mandalay, and Admiral Mountbatten prepared for operation DRACULA to seize Rangoon amphibiously from the south. At the close of the monsoon, Chinese, American, and British troops under the immediate command of General Sultan advanced southward astride the Irrawaddy, captured Shwegu in early November, and by December had cleared the projected trace of the supply road to Bhamo.

The Japanese in Burma had never recovered from General Stilwell's thrusts and from the losses inflicted

by British and Indian forces on their 15th, 31st, and 33d Divisions in their abortive effort to sever the Bengal-Assam Railroad. As fast as the combat forces moved ahead, United States Engineers, commanded by Brig. Gen. Lewis A. Pick, shoved the road forward behind them, operating their bulldozers so far forward that they were frequently under fire. On 28 January 1945 a convoy of American trucks and matériel from India crossed the Burma-China frontier. The Stilwell Road was open.

In Western Burma the British broke south through Tiddim across the Chindwin against Japanese delaying actions. Southward in the Arakan, British operations cleared the Kaladan River delta on the Arakan Coast and provided air strips at Akyab and on Ramree Island.

The Japanese retreat in Burma was in full swing by the end of January 1945. General MacArthur's successive landings in the Philippines and United States fleet operations in the China Sea had cut the Japanese supply line to Burma. In mid-February, a British column crossed the Irrawaddy near Pagan and drove to Meiktila. The seizure of this road and rail center with its airfields undermined the whole Japanese position in Central Burma. In the meantime, other British-Indian forces were closing on Mandalay from the north and west. Japanese trapped in Mandalay held out against the British until 21 March. Forty days later British airborne troops descended along the western shore of the Rangoon River south of the port and assault troops came ashore the following day. The Japanese had already fled Rangoon and the British forces entered on 3 May. The port facilities were captured in good condition.

The Burma campaign had all but ended. A few Japanese units were able to withdraw eastward into Thailand and into the Moulmein area of Southern Burma, but thousands of the enemy were cut off in isolated pockets with little hope of escape. Admiral Mountbatten reported the fighting had already cost Japan 300,000 casualties of which 97,000 were counted dead.

The Asiatic operations had been maintained at the end of the most precarious supply lines in history. The efforts of the United States service forces to strengthen them were prodigious. United States port battalions at Calcutta worked in intolerable heat and humidity with native labor weakened by disease, heat, and famine. Despite these handicaps, they established records exceeding those of every other military port in

the world for quick unloading and turn-around of our ships. At the same time, the capacity of the tiny Bengal-Assam Railroad was more than doubled by American railway battalions which refused to let the disease and heat of the steaming Brahmaputra Valley dissipate their energies as they have weakened white men and brown for centuries. During 1943 and 1944 the flow of United States arms and matériel through Calcutta and up the valley had become great enough to support not only the Herculean job of building the Ledo Road and destroying the Japanese forces in its path, but to increase steadily the capacity of the Himalayan air route and the flow of arms to the undernourished armies of China.

Reverse in China

In the latter stages of the Burma campaign, American troops of the MARS force, a brigade of two regiments which succeeded the GALAHAD force, were flown to China together with two of the Chinese divisions that had been fighting in Burma.

By January 1945, Hump cargo had been increased to the amazing rate of 46,000 tons a month. This vital and hazardous traffic stands as one of the great logistical accomplishments of the war against Japan. It alone made possible the indispensable support which General Chennault's Fourteenth Air Force was able to give the Chinese armies and the attacks by China-based superfortresses on Japan's home islands. In June of this year when the Marianas bases had been sufficiently developed, the China-based B-29's were sent to the Pacific where they could be more easily supplied.

In May 1944, however, the Japanese had launched a strong drive southward from Tung Ting Lake in Hunan Province. In the late summer they began a complementary drive west from Canton. These salients joined near the American air base at Kweilin severing unoccupied China, and overran seven of the principal bases from which the Fourteenth Air Force had been throwing its weight against shipping in the

China Sea. In April 1945, the Japanese drove out of Paoching against our important air base at Chihkiang. Supported by the Fourteenth Air Force, Chinese troops slowed, stopped, then threw back this Japanese column with heavy losses. The offensives in China were the most serious the Japanese were able to mount in 1944 and 1945.

By the spring of this year the impact of the smashing attack across the Pacific islands had been felt deep in Asia. Fearing for the safety of their homeland, the Japanese had begun to withdraw large forces from South and Central China. Behind them Chinese troops were applying every pressure their present strength would permit. Under General Wedemeyer, American officers in increasing numbers were helping speed the retraining and reequipping of Chinese soldiers who had been fighting the Japanese for eight long years. The War Department made available to him two of the Army commanders who had helped defeat the German Wehrmacht, General Truscott of the Fifth Army in Italy and General Simpson of the Ninth Army. At the same time the Air Forces in China were reorganized, the 10th Air Force from India was moved into China and both the 10th and 14th were placed under the general direction of General Stratemyer. While this reorganization was in progress, General Chennault, who had commanded the original American Volunteer Group of "Flying Tigers" and then became the first commander of the 14th Air Force, asked to be relieved. The War Department granted his request and named Maj. Gen. Charles B. Stone to succeed him.

General Stillwell had been able to provide some training and equipment for 35 Chinese divisions in his training centers in Yunnan. Under the direction of the Generalissimo, General Wedemeyer was continuing this mission with full vigor and greatly increased resources now moving over the road from India. We were determined that when the final battle of Japan was fought the armies of the Emperor would find no comfort anywhere on earth.

ORDER OF BATTLE U. S. FORCES IN CHINA THEATER (AS OF 14 AUGUST 1945)

<i>Unit</i>		<i>Location</i>
Headquarters, U. S. Forces, China Theater	Lt. Gen. A. C. Wedemeyer	Chungking, China.
U. S. Army Air Forces, China Theater	Lt. Gen. G. E. Stratemyer	Chungking, China.
Tenth Air Force	Maj. Gen. H. C. Davidson	Liuchow, China.
Fourteenth Air Force	Maj. Gen. C. B. Stone, Jd.	Kunming, China.

Unremitting Pressure

It had always been the concept of the United States Chiefs of Staff that Japan could best be defeated by a series of amphibious attacks across the far reaches of the Pacific. Oceans are formidable barriers, but for the nation enjoying naval superiority they become highroads of invasion.

Japan's attack on our fleet at Pearl Harbor gave her a tremendous but, nevertheless, temporary advantage. The Japanese had reckoned without the shipyards of America and the fighting tradition of the United States Navy. Even before parity with the Japanese fleet had been regained, the Navy successfully maintained communications with Australia and had undertaken limited offensives in the Solomons to halt the enemy advance. A desperate courage stopped the Japanese before Australia in the now historic battle of the Coral Sea and then shortly afterward utterly smashed the Japanese advance toward the United States itself in the decisive action at Midway.

The broad strategic allocation of resources among the theaters was controlled by the Combined Chiefs of Staff, but the actual control of operations in the Pacific had been retained by the U. S. Chiefs of Staff. At the Casablanca Conference, the Combined Chiefs agreed that Japan must be prohibited from further expansion and from consolidating and exploiting her current holdings. This resolution was agreed upon even though we were at the very moment having great difficulty in concentrating sufficient resources to defeat the European Axis.

It has been declared axiomatic that a nation cannot successfully wage war on two fronts. With a full appreciation of the difficulties and hazards involved, we felt compelled to wage a war not only on two fronts, but on many fronts. Thus we arrived at the concept of global war in which the vast power of American democracy was to be deployed all over the earth.

At the TRIDENT Conference of May 1943 in Washington when the specific strategy of the global war was conceived, it was determined to step up the pace of the advance on Japan. Then a few months later, in August 1943, at the QUADRANT Conference in Quebec, the specific routes of the advance on Japan were laid out. Gen. Douglas MacArthur was directed

to continue his operations up the New Guinea coast to reach the Philippines by the fall of 1944. Operations in the Gilberts, the Marshalls, and the Marianas were agreed to, and it was forecast that by the spring of 1945 we would be able to secure a lodgment in the Ryukyus on the threshold of the Japanese homeland.

Admiral King was confident that somewhere during these advances, probably during the Marianas or the Philippine campaigns, the United States fleets would meet and decisively defeat the Japanese Navy. No long-range military forecast could have been more accurate.

At the QUADRANT Conference General Arnold proposed an air plan for the softening of Japan. It was later approved and carried into execution. It called for the establishment of bases in China, in the Marianas, and other Pacific Islands from which would operate the huge B-29 superfortresses then only just going into production.

Pacific Pincers

At the turn of the year 1943 Army forces in the South Pacific area were added to General MacArthur's strategic command. It was the intention of the Joint Chiefs of Staff to maintain the initiative, advancing by amphibious flanking actions on the Philippines and the Japanese Islands from the south and from the east. The advance across the tremendous reaches of the Central Pacific was placed under command of Admiral Chester W. Nimitz. There were two axes of the operations on the southern flank—one in New Guinea commanded by Lt. Gen. Walter Krueger, the other in the Solomons under Admiral William F. Halsey.

It was General MacArthur's intention to proceed by a series of envelopments up the coast of New Guinea and into the Philippines. We now enjoyed superiority both on the sea and in the air. He was therefore able to land his troops where the Japanese were weakest and confine their stronger forces in pockets from which, because of incredibly difficult terrain and our air and sea superiority, they could never break out. As a result there were at the time of surrender hundreds of thousands of Japanese troops isolated in the jungles of the Pacific islands, dying on the vine and of no further

THE GREAT OCEAN

Here are the boundless waters of Earth. The shortest route to Japan across the top of the world was blocked by weather. So the Army and Navy were compelled to trip their way over the Equator to the down-
under lands of Australia and New Guinea and back up to the Philippines and the Ryukyus. Was it the Pacific Ocean as it became the broad high-
way of the world? Or was it the sea of the East? The answer lies in the fate of the defeated Japanese fleet back to their harbors after the battle of the Philippines.

use to their Emperor. As General MacArthur reported toward the end of 1944:

The enemy garrisons which have been bypassed in the Solomons and New Guinea represent no menace to current or future operations. Their capacity for organized offensive effort has passed. The various processes of attrition will eventually account for their final disposition. The actual time of their destruction is of little or no importance and their influence as a contributing factor to the war is already negligible. The actual process of their immediate destruction by assault methods would unquestionably involve heavy loss of life without adequate compensating strategic advantages.

Even with the intense preoccupation in the campaigns in Europe during the past two years, this great nation had been able steadily to increase the resources available in the Pacific until at the moment of German collapse General MacArthur and Admiral Nimitz were established on the threshold of the Japanese homeland and the industries and cities of Japan were crumbling under our aerial bombardment. The U. S. Navy dominated the Pacific. The Commonwealth Government, under President Osmeña, had been reestablished in power and in residence in the Philippines.

On 1 July 1943, General MacArthur had four American divisions and six Australian divisions under his control. His air force had less than 150 heavy bombers. Admiral Nimitz had nine Army and Marine divisions. Yet in the spring of 1945 these two commanders were ejecting the Japanese from the Philippines and the Ryukyus—already on the home stretch to Japan.

Following the completion of the extremely difficult Buna campaign late in June 1943, difficult because of the paucity of facilities and the character of the terrain, two regimental combat teams landed on Woodlark and Kiriwina Islands off the eastern tip of New Guinea. The operation was small but it was typical of the general method of the offensive in the Southwest Pacific. Deceived by feints, the Japanese were taken by surprise. Airfields were quickly established on these two islands, from which effective support could be provided for the operations which were to follow, and which permitted the rapid transit of fighter aircraft, if necessary, between the Solomons and New Guinea.

The capture of New Georgia Island with its im-

portant Munda airfield was accomplished by Maj. Gen. Oscar W. Griswold's XIV Corps. The first landing in force was made 30 June on nearby Rendova Island. Japanese ground reaction was slight, but in the air the enemy tried hard to disrupt the landing. The next day Marine 155-mm guns on Rendova were shelling Munda airdrome six miles across the water. Elements of 37th and 43d Divisions then landed on New Georgia enveloping the western end of the island. After our forces were reinforced by troops of the 25th Division, Munda was captured on 5 August. Bypassing the strongly held island of Kolombangara, the XIV Corps had captured Vella Lavella by 9 October.

General MacArthur reduced Salamaua with an Australian force which advanced overland from the west and an American regimental combat team which made an amphibious landing south of the town. On 4 September, while the Japanese were still resisting at Salamaua, an Australian force landed a few miles east of Lac. The next day, supported by air and screened by smoke, a U. S. parachute regiment dropped to seize the airdrome at Nadzab, 19 miles northwest of the town.

This daring move permitted the airborne movement to Nadzab of an Australian division, which then participated with their forces to the east in a concentric attack on Lac. After difficult fighting the town was occupied on 16 September.

Salamaua had fallen five days previously. General MacArthur then moved quickly toward Finschhafen. Employing mostly Australian forces, he occupied the town on 2 October. By February 1944 the Huon Peninsula was completely in our hands. During these operations and those which followed, extensive air attacks were maintained against the enemy's supply lines, barges, and airfields, contributing materially to the success of the ground operations.

Meantime New Zealand troops occupied two islands in the Treasury Group of the northern Solomons late in October. Preceded by diversionary landings in northwest Choiseul, the 3d Marine Division of Lt. Gen. A. A. Vandegrift's I Marine Amphibious Corps landed on 1 November at Empress Augusta Bay in western Bougainville. This permitted the establishment of a naval base and three airfields within

CENTRAL PACIFIC ADVANCE

fighter range of the enemy concentrations at Rabaul, 235 miles distant. From these airfields the remaining Japanese installations in the Solomons could more extensively be neutralized by Maj. Gen. Nathan F. Twining's Thirteenth Air Force, thus obviating the immediate necessity of conducting a campaign to annihilate the enemy or to complete the capture of the islands. On 11 November elements of the 37th Division entered the line, and on 15 December command of the beachhead passed to our XIV Corps, which had been reinforced by the Americal Division. Meanwhile a naval task force under Admiral Halsey had

smothered Japanese air and naval power at Rabaul.

In the Central Pacific Area the primary mission of the Army command under Lt. Gen. Robert C. Richardson, Jr., was the training of units en route to the combat zones further south and west. Amphibious and jungle training centers were established under battle-tested instructors in the Hawaiian Islands. The effectiveness of this training was demonstrated in every area of the Pacific Ocean.

In the fall of 1943 a series of operations was initiated which, less than a year later, had given us mastery of the Pacific. Attacks directed against the

enemy along several axes forced him to deploy his relatively inferior air strength over a wide area, without sufficient strength at critical points. The vast sea area favored the employment of superior American naval strength. The small islands were not suitable for the employment of large Japanese ground forces.

The first step was the seizure of the Gilbert Islands, designated operation GALVANIC. Proluded by attacks by carrier task forces on Marcus and key islands in the Marshalls, Baker, Nukufetu, and Nanumea Islands were occupied by United States forces at the beginning of September. Early in October, Wake was heavily bombarded. After a preparatory naval and air bombardment by both Marine and Navy planes and Maj. Gen. Willis H. Hale's Seventh Air Force, the invasion of the Gilberts began on 21 November. The 2d Marine Division landed on Tarawa. A combat team of the 27th Division landed on Makin. The Jap fought stubbornly on both islands. The larger enemy force on Tarawa made the operation difficult and costly for our troops. Abemama to the south was seized without opposition.

These operations opened a phase of warfare new to most of our troops. The enemy was concentrated within restricted areas, heavily fortified in pillboxes, and protected by mines and beach obstacles. Landing forces faced intense cross-fires. The enemy could be dislodged only by shattering bombardment and powerful hand-to-hand infantry assault. Amphibious tractors proved to be one of the effective assault weapons. They could be floated beyond the range of shore batteries, deployed in normal landing boat formations, and driven over the fringing reefs on to and up the beaches.

From the Gilberts, Admiral Nimitz turned to operation FLINTLOCK—the seizure of several atolls in the Marshall Islands. On 31 January 1944, after two days of intense air and naval bombardment, the 7th Division, veteran of Attu, landed on the southern islands of Kwajalein Atoll, while the 4th Marine Division attacked the northern tip at Namur and Roi. These divisions were part of the V Marine Amphibious Corps, commanded by Maj. Gen. Holland M. Smith. By 8 February all resistance had ceased. General Richardson wrote me after a flight to the Marshalls:

As a result of the air, naval, and artillery bombardment, the scene at Kwajalein was one of great devastation. The destruction was complete. Upon approaching it from the lagoon side, it gave the appearance of no-man's land in World War I

and was even greater, I think, than that of Betio on Tarawa. With the exception of rubble left by concrete structures, there were no buildings standing. All those which had been made of any other material except concrete had been completely burned or destroyed. The result was that there were practically no stores left except a few packages of rice and a little clothing and ammunition scattered here and there.

Majuro, with its excellent naval anchorage, was also occupied. Then after heavy attacks by carrier planes, a combat team of the 27th Division and a Marine combat team landed on Eniwetok Atoll on 19 February and completed its capture on 22 February. Control of the Marshalls enabled the interdiction by air of the enemy naval base at Truk until the advance into the Carolines could definitely isolate it. Truk also came under attack by Thirteenth Air Force B-24's based in the Admiralties.

Concurrent with these moves were operations in the Southwest against the western end of New Britain, to establish control of Vitiaz and Dampier Straits. On 15 December 1943 a reinforced cavalry regiment landed on three beaches in the Arawe area. The airdrome on Cape Gloucester was a desirable link in the chain of bases necessary to permit the air forces to pave the way for further advances. During a period of weeks the area was subjected to intensive aerial bombardment and on 26 December the 1st Marine Division landed and 4 days later captured the airdrome. By mid-March joint operations of the Marines and the Army's Arawe Force had secured western New Britain. While this fighting was in progress General MacArthur's advance westward continued. On 2 January 1944 a regimental combat team of the 32d Division made a jump of 110 miles to land near Saidor, on the north coast of New Guinea, and by 7 January an airstrip was in use.

The Admiralty Islands, lying west of the Bismarck Archipelago, were strategically important because of their airfields and harbor. An operation was originally scheduled for April 1944, but on 29 February General MacArthur accompanied advance elements of the 1st Cavalry Division, transported on Vice Admiral Thomas C. Kinkaid's Seventh Fleet destroyers and high-speed transports to reconnoiter Los Negros Island. He was prepared to follow in force if the situation warranted. Little opposition was found, and the remainder of the division was committed. Momote airdrome was captured, and the beachhead secured after a series of fanatical counterattacks. During the remainder of March and the early part of April, the

occupation of Manus and the adjacent islands was completed.

The next move to Hollandia and Aitape on 22 April involved a leapfrog advance westward of more than 400 miles. Since the landings were beyond the effective range of Army fighters, air support was provided by naval carriers. At Hollandia were located three excellent Jap airfields, and Humboldt Bay was suitable as an advanced naval and supply base. The airfields were found to be hard to reach overland, so General MacArthur occupied Aitape and based fighters on the airstrip there. Three main landings were made by troops of the 24th, 32d, and 41st Divisions of Lt. Gen. Robert L. Eichelberger's I Corps, one just east of Aitape, one in Humboldt Bay, and one in Tanahmerah Bay. The Jap was taken by surprise; fewer than 5,000 of his troops were in the entire Hollandia area. By 30 April airfields there were in our hands. General Krueger's Sixth Army Headquarters moved into Hollandia 6 July 1944; General MacArthur brought his headquarters up from Brisbane on 8 September 1944. On this same date General Eichelberger was assigned to command the newly activated Eighth Army with headquarters also at Hollandia.

The Hollandia-Aitape operation cut off more than 50,000 Japanese troops to the eastward. The advance westward was continued in mid-May when elements of the 41st Division made an unopposed landing near Arara. A few days later a regiment of the same division captured the offshore island of Wakde with its airstrip and extended the beachhead on the mainland to include Maffin Bay.

Later in the month our 41st Division landed 330 miles farther west on Biak Island, strategically located off Geelvink Bay. The 8,000 well-equipped Japanese troops on the island put up fierce resistance, and it was 22 June before Biak's three airfields were in use. In another surprise attack, this time supported by paratroops, a regimental combat team occupied Noemfoor Island in early July. The possession of the airfield at this point gave much needed breadth and depth to the air deployment, permitting the further penetration and dislocation of enemy supply lines in the Southwest Pacific. By this time Japanese air had almost disappeared from the New Guinea area except for an occasional raid on landing craft or over established beachheads.

A landing at Sansapor on 30 July by elements of our 6th Division secured air and naval bases still further

west, on the Vogelkop Peninsula. Although 18,000 Japanese garrisoned the Vogelkop Peninsula, General MacArthur again caught the enemy off balance and resistance was slight.

In a little over 12 months American forces in the Southwest Pacific, with the assistance of Australian units, had pushed 1,300 miles closer to the heart of the Japanese Empire, cutting off more than 135,000 enemy troops beyond hope of rescue. The operations had been conducted under adverse weather conditions and over formidable terrain, which lacked roads in almost every area occupied, and made troop movements and supply extraordinarily difficult. Malaria was a serious hazard, but with suppressive treatment and rigid mosquito control, it no longer was a serious limitation to tactical operations.

In the Pacific, men who had engaged in combat for long months had to be withdrawn to rear positions to recuperate. Consequently, the theater commanders endeavored to maintain replacement pools sufficiently large to provide a margin for the lost time of recuperation and transportation to and from the battle area. For every unit engaged in combat operations, more than its equivalent had to be present in the theater to assure this margin.

The prompt "roll up" of the bases, personnel, and matériel in Australia and the islands of the South Pacific permitted the same equipment to be utilized again and again, so that despite the lower priority given Pacific operations they could be continued. Only skeleton organizations remained in Australia, to procure supplies and maintain air transport.

Similar to the preparation of Western Europe for invasion, each advance northward toward Japan was preluded by air attack. Under Lt. Gen. George C. Kenney, the Fifth Air Force and later the Far East Air Forces, which included both the Fifth commanded by Maj. Gen. Ennis C. Whitehead and the Thirteenth commanded by Maj. Gen. St. Clair Streett, effectively stopped the flow of supplies to bypassed Japanese units. The Japanese aerial threat to our own operations was swept from the skies, and direct support was provided for the successive amphibious advances. At the same time, General Kenney's forces forayed far to the westward, striking powerful blows at strategic targets in Timor, the Celebes, Java, and Borneo. These attacks seriously impaired the ability of the Japanese to maintain their widely scattered forces and reminded the captive peoples of those

islands that Allied strength was rapidly growing and the enemy's hold was becoming more and more insecure.

Operation FORAGER to capture the Marianas was next on Admiral Nimitz's schedule. On 15 June Lt. Gen. Holland M. Smith's V Marine Amphibious Corps, consisting of the 2d and 4th Marine Divisions, followed by the 27th Infantry Division, landed on Saipan. On 9 July, after 25 days of extremely heavy fighting, the island was in their possession, though mopping-up operations continued for months.

On 21 July the 77th Infantry Division, the 3d Marine Division, and a Marine brigade of the III Marine Amphibious Corps under Maj. Gen. R. S. Geiger landed on Guam. The assault made steady progress. Resistance ceased on 10 August. Shortly after the Saipan operation had ended our XXIV Corps artillery, which had supported that action, began the neutralization of Tinian, assisted by fighter aircraft of the Seventh Air Force. On 24 July elements of the 2d and 4th Marine Divisions assaulted that island and secured it in 9 days of heavy fighting.

Bombers of the Seventh Air Force, now operating from Saipan under Maj. Gen. Robert W. Douglass, soon were striking Iwo Jima and Chichi Jima in the Bonins. Even before the capture of the Marianas was complete, airfields were under construction on Saipan and Guam, from which Superfortresses could begin the strategic bombardment of the main Japanese Island of Honshu. The first major strike was delivered 24 November 1944.

With the rapid increase in the size of the Pacific Ocean Command, it became necessary to consolidate the Central and South Pacific Army forces. On 1 August 1944, Headquarters, U. S. Army Forces, Pacific Ocean Areas, was established under General Richardson's command. Concurrently, two subordinate administrative commands, the Central Pacific Base Command and the South Pacific Base Command, were organized. All Army Air Forces in the area were placed under Headquarters, U. S. Army Air Forces in the Pacific Ocean Area, commanded by the late Lt. Gen. Millard F. Harmon, who came from the South Pacific Area. In addition, General Harmon was designated Deputy Commander of the Twentieth Air Force to represent General Arnold in the theater. General Harmon after a long record of splendid service was lost in a trans-Pacific flight, on 28 February 1945. He was succeeded by Lt. Gen. Barney McK. Giles who at the time of his

appointment was Deputy Commander and Chief of Staff of the Army Air Forces.

Reconquest Of The Philippines

Toward the end of August Admiral Halsey's Third Fleet began a probing operation in the western Carolines and the Philippines. His carrier planes struck at Yap and the Palau Islands on 7 and 8 September, and the next two days bombed Mindanao. On the morning of the 12th, Admiral Halsey struck the central Philippines and arrived at a conclusion which stepped up the schedule by months.

The OCTAGON Conference was then in progress at Quebec. The Joint Chiefs of Staff received a copy of a communication from Admiral Halsey to Admiral Nimitz on 13 September. He recommended that three projected intermediate operations against Yap, Mindanao, and Talaud and Sangihe Islands to the southward be canceled, and that our forces attack Leyte in the central Philippines as soon as possible. The same day Admiral Nimitz offered to place Vice Admiral Theodore S. Wilkinson and the 3d Amphibious Force which included the XXIV Army Corps, then loading in Hawaii for the Yap operation, at General MacArthur's disposal for an attack on Leyte. General MacArthur's views were requested and 2 days later he advised us that he was already prepared to shift his plans to land on Leyte 20 October, instead of 20 December as previously intended. It was a remarkable administrative achievement.

The message from MacArthur arrived at Quebec at night, and Admiral Leahy, Admiral King, General Arnold, and I were being entertained at a formal dinner by Canadian officers. It was read by the appropriate staff officers who suggested an immediate affirmative answer: The message, with their recommendations, was rushed to us and we left the table for a conference. Having the utmost confidence in General MacArthur, Admiral Nimitz, and Admiral Halsey, it was not a difficult decision to make. Within 90 minutes after the signal had been received in Quebec, General MacArthur and Admiral Nimitz had received their instructions to execute the Leyte operation on the target date 20 October, abandoning the three previously approved intermediary landings. General MacArthur's acknowledgement of his new instructions reached me while en route from the dinner to my quarters in Quebec.

That day the 1st Marine Division of General Geiger's III Marine Amphibious Corps, with a combat team of the 81st Infantry Division in reserve, landed in Peleliu in the Palau group. Two days later the 81st Division landed on Angaur, an island south of Peleliu.

The War Department on 16 September relayed to General MacArthur a report from General Stilwell to the effect that the Japanese offensive in central China would soon result in capture of the eastern China airfields from which Maj. Gen. Claire L. Chennault's Fourteenth Air Force had planned to support operations in the northern Philippines. MacArthur replied that Admiral Halsey's carrier task force had so severely reduced hostile air capabilities in the Philippines, Formosa, and the Ryukyus that it would be possible to move directly from Leyte to Lingayen Gulf without the support of Chennault's air force. Admiral Halsey's carrier planes had destroyed almost 2,000 Japanese aircraft in the probing attacks during September.

On 22 September another combat team of the 81st Division moved to Peleliu, where heavy resistance was being met. Capture of this island was completed by 30 September except for a few isolated enemy groups which held out in caves for another two months. On 21 September, patrols of the 81st Division landed on Ulithi, meeting no opposition. The main body landed two days later.

The landing on Peleliu coincided with General MacArthur's move to seize Morotai north of Halmahera with the 31st and 32d Divisions. Despite uniformly stubborn resistance the Japanese had lost a series of islands which were important stepping stones for the return to the Philippines and the ultimate conquest of Japan.

The advance of our forces westward across the Pacific had been accompanied by the steadily expanding strategic operations of the Eleventh Army Air Force in Alaska, the Seventh Air Force in the Central Pacific, and the Fifth and Thirteenth Air Forces in the Southwest Pacific. In the operations fleet carriers had played a vital part. During the campaigns through the Southwest Pacific and the western mandated islands, General Kenney's aircraft and those of the Pacific Ocean Areas swung their powerful attacks back and forth in mutual support of the various operations. At the same time the westward advance had resulted in an ability to strike from the air at the foundations of the Japanese war potential—their shipping, petroleum, and aircraft industries.

On 19 October two assault forces, the 3d commanded by Admiral Wilkinson and the 7th commanded by Rear Admiral Daniel E. Barbey, approached the east coast of Leyte with the Sixth Army under General Krueger aboard. It was an armada of combat and assault vessels that stretched across the vast Pacific horizon. In the covering naval forces were the battle-ships *California*, *Mississippi*, *Maryland*, *Pennsylvania*, *Tennessee*, and *West Virginia* with their screen of cruisers and destroyers. The troops and matériel with which we were to seize Leyte were loaded in 53 assault transports, 54 assault cargo ships, 151 landing ships (tank), 72 landing craft (infantry), 16 rocket ships, and over 400 other assorted amphibious craft. The air cover was provided by planes from 18 escort carriers.

Out to sea Admiral Halsey's mighty carrier task force, which helped prepare the way for the landings by air bombardment, now stood watch for possible Japanese naval opposition to the landings. That day a Japanese search plane discovered this great amphibious force and reported its presence to Admiral Kurita's Singapore fleet, which then constituted 60 percent of Japan's major naval units. This report precipitated one of the decisive battles of history.

The X and XXIV Corps of the Sixth Army went ashore on schedule the following day after the Navy had paved its way with drum-fire bombardment. Three days later General MacArthur directed the ground forces to secure their beach areas and await the outcome of the naval battle which was now impending. The Japanese made the decision to commit their fleet in the battle to prevent America's return to the Philippines. Admiral King has described the great naval action which followed in his recent report. Every American who reads it must be filled with tremendous pride in the achievements of our fighting Navy.

By the 26th it was apparent that the Third and Seventh Fleets had virtually eliminated Japan as a sea power. Her fleet had suffered a crippling blow.

In April 1944 the defense of the Philippines, the Japanese Empire of conquest in the south and west, the Netherlands Indies, Malaya, Thailand, Borneo, French Indo-China, the Moluccas and New Guinea, had been in charge of Field Marshal Count Hisaichi Terauchi. From his headquarters at Manila he controlled 17 Japanese armies totaling about 925,000 men.

Terauchi was a typical Japanese jingoist. He had been Minister of War and commanded the armies which set out in 1937 to sack China. In the fall of 1943 he had assumed command of the southern armies with headquarters at Singapore. He moved his headquarters to Manila a half year later when the Philippines were added to his area. The 14th Area Army in the Philippines was then under command of Lt. Gen. Shigenori Kuroda. A month before the forces of General MacArthur and Admiral Nimitz were at his throat, Terauchi's staff had prepared for him the following estimate of American intentions:

A two-pronged attack on Luzon is planned. MacArthur's Army, aided by naval cooperation from Nimitz, will advance in the southern Philippine Islands. The other attack will be directed at the northern Philippines from the Pacific Ocean.

Nimitz will provide MacArthur's forces with direct cooperation support with a part of his naval forces. His main forces will be prepared to engage our navy in the northern Philippines and Taiwan area and overcome any air resistance.

The anti-axis Far East Air Army under Kenney will overcome any air resistance over the Philippines and together with the enemy air force stationed in China will operate over the North China Sea to isolate the Philippines.

In the six days of the great naval action the Japanese position in the Philippines had become extremely critical. Most of the serviceable elements of the Japanese Navy had been committed to the battle with disastrous results. The strike had miscarried, and General MacArthur's land wedge was firmly implanted in the vulnerable flank of the enemy. Terauchi no longer had an effective fleet to cover his forces in the Philippines or his communications to the empire of Malaysia so easily conquered two and one-half years before. There were 260,000 Japanese troops scattered over the Philippines but most of them might as well have been on the other side of the world so far as the enemy's ability to shift them to meet the American thrusts was concerned. If General MacArthur succeeded in establishing himself in the Visayas where he could stage, exploit, and spread under cover of overwhelming naval and air superiority, nothing could prevent him from overrunning the Philippines.

Terauchi decided that the battle must be fought in the difficult terrain of the Leyte mountains and rice paddies. He relieved Kuroda as commander of the 14th Area Army and replaced him with General Tomoyuki Yamashita, who had conquered Singapore in 1942 and then moved to the Philippines to wind up

the campaign after Lt. Gen. Masaharu Homma had been unable to budge the American forces holding out on Bataan. Yamashita was one of Japan's best known generals. For his victories in Singapore and Bataan he had been given the First Area Army in Manchuria, one of the two top field commands in the Kwantung Army.

To General Makina, commander of the 16th Division, then fighting a delaying action against the U. S. Sixth Army under General Krueger, Yamashita relayed this message:

The Army has received the following order from his Majesty, the Emperor:

"Enemy ground forces will be destroyed."

General MacArthur's advance continued. After securing the high ground overlooking Leyte Gulf, Maj. Gen. J. R. Hodge's XXIV Corps penetrated inland to secure Dagami and Burauen. The X Corps, under Maj. Gen. F. C. Sibert, swept across the San Juanico Strait to seize the south coast of Samar and landed troops in a short amphibious operation on the north coast of Leyte.

By 5 November the American forces had reached the vicinity of Limon at the northern end of the valley road leading to Ormoc, the principal Japanese installation on the island. Bitter fighting for Leyte was now in progress, rendered the more difficult by typhoons which inaugurated the rainy season.

During the naval battle and the weeks following, the Japanese were able to transport reinforcements to Leyte, but by mid-December General Kenney's land-based fighters and Admiral Halsey's carrier planes had strangled this stream of reinforcements. On 1 November United States air patrols located four large transports unloading, escorted by four destroyers and two destroyer escorts.

Army planes struck and sank one, possibly two transports. On 3 November, another three transports were seen unloading at Ormoc, but the Japanese maintained sufficient air patrol overhead and continued striking the United States fields on the east coast so that their unloading operations could not completely be interrupted. On 7 November three large transports and four small transports unloaded, covered by seven destroyers and two destroyer escorts. On 9 November ten destroyers and two heavy cruisers brought in four more large troop transports. Kenney's planes attacked and sank two transports, one destroyer, and six freighters.

On 11 November another convoy started into Ormoc Bay. Carrier planes, now reinforced after the great naval battle, attacked. Two transports were sunk. Four destroyers were also sent to the bottom and the fifth was badly damaged. One destroyer escort was sunk. On 7 December an entire convoy of six transports, four destroyers, and three destroyer escorts were sunk in San Isidro Bay by United States planes. On 11 December three transports and three destroyers were sunk off Palompam, and the following day another destroyer was sunk and one destroyer escort and two transports were badly damaged. By now the Japanese were able to commit no more of their valuable ships to the battle for the central Philippines and attempted to supply their troops already on Leyte by sailboat.

The Japanese took heavy troop losses in these repeated sinkings, but they had at the same time made some formidable reinforcements. By the middle of November troops of the U. S. 24th Division, reaching into the remnants of the Japanese 16th Division west of Jaro, killed a messenger and learned that the Japanese 1st Division was now on the island. Yamashita was therefore committing his best troops. The 1st Division was one of Japan's finest from the Kwantung Army.*

When United States forces from the south and across the Pacific began to gather speed, the 1st Japanese Division had been moved to China. After General MacArthur's assault force had been sighted, the 1st Division was rushed from Shanghai to Manila and then on to Leyte.

In the Ormoc valley the Japanese 1st Division fought fiercely and delayed but could not stop Krueger's advance. By the end of November American troops were closing on Limon and another column threatened Ormoc from the south. Violent rain storms and deep mud harassed the supply lines. Forward units were dependent on hand-carry. Casualties were evacuated by native bearers.

But by 1 December seven divisions were well established ashore, five airfields were in operation, and the waters of the Visayas under firm naval control.

The 77th Division landed south of Ormoc on 7 December and captured the town four days later along with great quantities of enemy supplies. Toward the end of December the 7th, 24th, 32d, 77th, and 96th Divisions, the 1st Cavalry Division, and the 11th Airborne Division closed out organized Japanese resistance on the island.

It was at Kilometer 79 on the Ormoc highway that the Japanese 1st Division command post, defended by 500 exhausted, defeated soldiers made the last stand. This little band, made up of every element General Kataoka had been able to reassemble, quit on the night of 21 December and fled south and west. Men of the 32d Division found this letter, written by an unknown Japanese soldier:

I am exhausted. We have no food. The enemy are now within 500 meters from us. Mother, my dear wife and son, I am writing this letter to you by dim candle light. Our end is near. What will be the future of Japan if this island should fall into enemy hands? Our air force has not arrived. General Yamashita has not arrived. Hundreds of pale soldiers of Japan are awaiting our glorious end and nothing else. This is a repetition of what occurred in the Solomons, New Georgia, and other islands. How well are the people of Japan prepared to fight the decisive battle with the will to win . . . ?

Marshal Terauchi, realizing that the Philippines were slipping from his grasp fled with his headquarters to Saigon, Indo-China.

Command of the battle of Leyte passed to Eichelberger's Eighth Army on 26 December. For Krueger's Sixth Army there was other business.

While mopping-up continued on Leyte, General MacArthur had sent a landing force of two regiments into southern Mindoro. Within 24 hours American planes and PT boats were operating off the southern coast of Luzon.

Battle of Luzon

In the first week of January a new American assault force gathered east of Leyte, slipped through the Surigao Strait over the sunken wrecks of Japanese warships that had gone down in their attempt to turn aside the invasion more than two months before, and passed into the Mindanao and Sulu Seas. This American force was treading its way through the heart of the Philippine Archipelago and through waters where the Japanese Navy and air forces had for two years maintained unchallenged supremacy, to invade Luzon by effecting a landing in Lingayen Gulf, its classic point of greatest vulnerability.

No opportunity was overlooked to conceal this bold plan from the Japanese. While the assault force was proceeding up the west coast of Luzon, Kenney's planes and the guerillas under MacArthur's direction concentrated on the destruction of roads, bridges, and tunnels to prevent General Yamashita from shifting forces to

THEATERS OF OPERATIONS

The decision to pool the resources of the United States and Great Britain to defeat Germany, Italy and Japan was taken as the Joint Chiefs of Staff met in Washington in December 1941. To implement this decision and establish the consolidated military control, there was created the agency known as the Combined Chiefs of Staff. It was the purpose of the Combined Chiefs to prepare the operations in the theaters of operations, and recommend the Allied Commanders to execute them. The map shows the operational areas established by the Joint Chiefs of Staff, and the areas of responsibility of the Allied Commanders. The map is dated 10 SEP 1944.

meet the assault. The guerrillas in southern Luzon conducted noisy demonstrations to divert Japanese attention to the south. Navy mine sweepers swept the Balayan, Batangas, and Tayabas Bays on the south coast of Luzon. Landing ships and merchantmen approached the beaches until they drew fire, then slipped out under cover of night. United States transport planes flew over Batangas and Tayabas and dropped dummies to simulate an airborne invasion. The Tokyo radio reported that American troops were trying to land on Luzon but had been driven off. Japanese forces on the island, harassed by guerrillas and by air, drove north, south, east, and west in confusion, became tangled in traffic jams on the roads, and generally dissipated what chance they might have had to repel the landing force. On 9 January the U. S. Sixth Army, now composed of the I and XIV Corps, hit the beaches in Lingayen Gulf. By nightfall, 68,000 troops were ashore and in control of a 15-mile beachhead, 6,000 yards deep.

The landing had caught every major hostile combat unit in motion with the exception of the 23d Infantry Division to the southeast of the beachhead in the central Luzon plain and its supporting 58th independent mixed brigade 25 miles to the north of Lingayen Gulf. Yamashita's inability to cope with General MacArthur's swift moves, his desired reaction to the deception measures, the guerrillas, and General Kenney's aircraft combined to place the Japanese in an impossible situation. The enemy was forced into a piecemeal commitment of his troops. The Japanese 10th and 105th Divisions in the Manila area which were to secure Highway No. 5 on the eastern edge of the central Luzon plain failed to arrive in time. The brunt of defending this withdrawal road to the north fell to the 2d Japanese Armored Division which seemingly should have been defending the road to Clark Field.

General MacArthur had deployed a strong portion of his assault force on his left or eastern flank to provide protection for the beachhead against the strong Japanese forces to the north and east.

In appreciation of the enemy's predicament the Sixth Army immediately launched its advance toward Manila across the bend of the Agno which presumably should have been a strongly held Japanese defense line.

The troops met little resistance until they approached Clark Field. The I Corps, commanded by Maj. Gen. Innis P. Swift, had heavy fighting on the east flank where the Japanese were strongly entrenched in

hill positions. For the time being they were to be held there to keep the supply line for the advance on Manila secure.

On 29 January troops of General Hall's XI Corps under strategic direction of the Eighth Army landed on the west coast of Luzon near Subic Bay, meeting light opposition. They drove eastward to cut off the Bataan peninsula where General MacArthur had made his stand three years before, denying the Japanese the use of Manila harbor for months.

The 11th Airborne Division on 31 January made an unopposed amphibious landing at Nasugbu in Batangas Province south of Manila. Three days later the division's parachute regiment jumped to Tagaytay ridge dominating the Cavite area. That night troops of the 1st Cavalry Division raced through Novaliches and reached Grace Park in the northeastern portion of the city of Manila. On 6 February the airborne troops reached Nichols Field. As the troops of the Sixth Army closed on Manila from the north, northwest, and south, the situation of Japanese forces in the city was rendered hopeless but they fought bitterly from house to house. Organized resistance ceased on 23 February when American infantry penetrated the old walled city.

Preceded by heavy air and naval bombardment, elements of the 38th Division landed on 15 February at Mariveles on the tip of Bataan. Resistance was light and our soldiers rapidly advanced along the perimeter road west of Manila Bay. While the battle for the city still raged, MacArthur moved to open Manila Bay and begin preparation of the Philippines as a major base for the next United States advances in the far Pacific.

Corregidor had gone under Allied bombardment on 23 January, and in less than a month Kenney's airmen dropped 3,128 tons of bombs on the two and three-fourths square-mile island that controls Manila Bay.

On the morning of 16 February, two long trains of Army C-47 transports approached the "Rock," close to the 500-foot sheer cliffs. A sudden 18-mile-an-hour wind swept the air clear of the smoke and dust of the naval and air bombardment that had ceased a few minutes earlier. Then the troop carriers began to sow the sky. Chutes spilled out white and troops of the veteran 503d Parachute Regiment drifted downward toward the lighthouse and golf course on the little island, against scattered small arms fire from the Japs on the ground. Simultaneously, troops of the 34th Infantry Regiment hit the shore in assault boats at San José

South Dock. They ran into a heavy mine field covering the entire length of the beach, but little fire from Japs on the island.

Fighting in the tunnels built by Americans in an attempt to make Corregidor impregnable prior to World War II, the Japs continued their suicidal resistance for nearly two weeks. Toward the end there was a series of terrific explosions on the islands as the Japs destroyed the tunnel system and themselves with it. Americans sealed up remaining caves and an estimated 300 Japs. A total of 4,215 Japs were killed on the island, an unknown number blown up. Of the 3,038 Ameri-

cans who took back Corregidor, 136 were killed, 8 were missing, and 531 wounded.

Manila Bay was open in early March. In less than two months General MacArthur accomplished what the Japanese had needed six to do after Pearl Harbor.

In late February, elements of the Eighth Army's 41st Division effected an unopposed landing at Puerto Princesa, Palawan Island. The force captured the town with its two airstrips and completely occupied Puerto Princesa Peninsula. The airfields gave control of a wide area of the China Sea greatly facilitating the severance of Japanese communication with Malaysia and Burma.

On 10 March other 41st Division troops landed on the western tip of Mindanao, second largest island in the Philippine group. Initial resistance was light and the city of Zamboanga fell the following day, but heavy fighting followed in the foothills and continued for weeks.

Landings were made during March on Panay, Cebu, and Negros. Reconnaissance parties went ashore on Jolo, Tawitawi, and other islands in the Sulu Archipelago, extending our holdings to within 40 miles of Borneo. In each case the landings were effected most skillfully with a minimum of resistance but stubborn and prolonged fighting usually followed in the hills.

Driving north from the central plain of Luzon, the Sixth Army Divisions met a fanatical enemy in the mountain ranges between Baguio and Balete Pass. East of Manila, infantry fought for long weeks across successive, bitterly-contested mountain ridges. Other elements cleared the area south of Laguna de Bay and advanced along the highway toward the Bicol Peninsula. On 1 April, a reinforced combat team landed at Legaspi in southeast Luzon. With the help of guerrillas, this force cleared the southeastern tip of the island and then moved northward toward our other troops advancing from central Luzon.

In mid-April, with the campaign in the Visayas drawing to a close, General Eichelberger sent the X Corps of his Eighth Army ashore on Central Mindanao north of Cotabato. By this time our troops were well established in the Zamboanga area and guerrilla forces were in possession of large areas in Northern Mindanao. Driving eastward to Davao Gulf, infantry of the 24th Division, X Corps, took Davao City on 4 May after house-to-house fighting. A column of the 31st Division drove north up the valley of the Pulangi River to Kibawe. Meanwhile, on Luzon, the important city of Baguio had fallen to the 33d and 37th Divisions.

Allied gains in the Southwest Pacific were extended on 1 May by an amphibious force of Australian and Netherlands East Indies troops which landed on oil-rich Tarakan Island, off the northeast coast of Borneo. By the end of the month all important installations on the island were in Allied hands.

In mid-May another landing was made on Mindanao, this time at Agusan on the guerrilla-held north coast. In two days the assault troops had driven 12 miles south and seized the town and airfield of Del Monte.

On 13 May, after months of extremely hard fighting, Balete Pass, gateway to the Cagayan Valley, was captured. East of Manila, on the same day, the 1st Cavalry Division reached the sea at Binangonan Point, thus dividing the last enemy pocket in central Luzon and cutting to the rear of the strong enemy positions in the Marikina watershed.

The Net Closes

The superforts were now blasting the great cities of the Japanese Islands on an ever-increasing scale. Chief targets were aircraft plants. Docks and small manufacturing plants received their share of the punishment.

On 19 February the V Marine Corps supported by Admiral R. A. Spruance's Fifth Fleet landed along the south coast of Iwo Jima, 775 miles from the main Japanese Island of Honshu. The fighting was exceptionally heavy and it was a month before organized resistance terminated. The Japanese defense grew more desperate as our advance moved toward the shores of their homeland.

Iwo Jima was of vital importance to the air assault on Japan. Japanese interceptors which came up to meet the B-29 strike on Tokyo on 7 April 1945 found a strong Mustang escort with our bombers. The Iwo fields saved hundreds of battle-damaged B-29's unable to make the full return flight to their bases in the Marianas, 800 miles further to the south.

Meanwhile Philippine-based aircraft were establishing command over Formosa and the China Coast and our naval carrier planes, as well as the superforts, delivered strikes at the very heart of Japan. It was now possible to drive forward into the Ryukyus along the main Japanese archipelago bordering the East China Sea.

The offensive on the Ryukyus was launched on 26 March when the 77th Division of Lt. Gen. Simon B. Buckner's Tenth Army landed on Kerama Retto west of Okinawa. In three days the force had secured all islands in the Kerama chain and had emplaced artillery within range of the key island, Okinawa.

Under cover of an intense naval bombardment, the XXIV Army Corps and the III Marine Corps established beachheads on the west coast of long, narrow Okinawa on 1 April. Aided by a realistic feint toward the thickly populated southern tip of the island, our forces

met little resistance in the landing and in consolidating positions ashore. After driving across the island, the Marines swung northward against light to moderate opposition; the Army corps turned south toward Naha, principal city of the island, where it was confronted by the main Japanese force elaborately entrenched.

By the end of the first week, four United States divisions were ashore and Marine fighters were operating from the Yontan airfield. The III Marine Corps had driven 20 miles northward.

General Hodge, commander of the XXIV Army Corps wrote:

It is going to be really tough. There are 65,000 to 70,000 fighting Japs holed up in the south end of the island, and I see no way to get them out except blast them out yard by yard. Our attack is set to go soon, and I think we are ready.

The Japs have tremendous amounts of artillery and have used it far more intelligently than I have ever seen them use

it to date. With best estimate, it shows around 500 or more individual weapons of 75-mm or better, including some 169-175 of caliber 105 or better. The most powerful weapon of long-range we have encountered to date is the 150 rifle with range of 27,000 yards which fires occasionally upon the two airfields from the vicinity of Shuri. They are using quite a few of the Spigot mortars (320-mm), 250-mm mortars, and aerial bombs up to 250 kilograms fitted as rockets. They are also using large sized rockets somewhere in the 5-, 6- to 8-inch class.

The terrain is decidedly rugged and cut up with many cliffs, natural and man-made, limestone and coral caves, and organized over long periods of time, and well-manned.

After mopping-up all of the northern part of the island, the Marines took over a sector in the south to throw their weight into the drive for Naha. Progress continued slow against the bitterest sort of opposition but by the middle of June, our troops had broken through the heavily fortified Naha and Shuri defense

lines and had compressed the Japanese into two pockets on southern Okinawa.

The ferocity of the ground fighting was matched by frequent Japanese air assaults on our shipping in the Okinawa area. By the middle of June, 33 U. S. ships had been sunk and 45 damaged, principally by aerial attacks. In the Philippines campaign U. S. forces first met the full fury of the kamikaze or suicide attacks, but at Okinawa the Japanese procedure was better organized and involved larger numbers of planes; also the Baka plane appeared, something quite new and deadly. This small, short range, rocket-accelerated aircraft, carried more than a ton of explosives in its war head. It was designed to be carried to the attack, slung beneath a medium bomber, then directed in a rocket-assisted dive to the target by its suicide pilot. It was in effect, a piloted version of the German V-1.

By mid-June, the Japanese had lost twenty percent of their total combat aircraft strength in the battle for Okinawa; in all, 3,400 Japanese planes were shot down over the Ryukyus and Kyushu and 800 more were destroyed on the ground. During the same period our losses totaled more than a thousand aircraft.

The pattern of fanatical Japanese resistance continued in the southernmost tip of the island. Each successive strong point was cleared only by heroic efforts of our soldiers and marines. By the end of June we had suffered 39,000 casualties in the Okinawa campaign, which included losses of over 10,000 among naval personnel of the supporting fleet. By the same date, 109,629 Japanese had been killed and 7,871 taken prisoner.

With victory just within his grasp, the Tenth Army Commander, General Buckner, was forward with his assault infantry, observing the progress of this final drive to clean up the island on 18 June. An enemy artillery salvo squarely bracketed his observation post, and General Buckner died a soldier's death a few minutes later. This splendid leader was replaced by General Joseph W. Stilwell, then Commander of the Army Ground Forces. The Ground Forces Command was given to General Jacob L. Devers, the veteran commander of the Southern Group of Eisenhower's Armies.

General Buckner had won his battle. Within three days of his death, all organized resistance had ceased on Okinawa, our first strategic base within the shadow of the Japanese homeland.

The 9th Australian Division on 10 June made an unopposed landing at Brunei Bay, in northwest Borneo,

seizing the naval anchorage and airfields. By overland and amphibious operations the Australians quickly drove south to important oilfields at Seria and Miri. The establishment of air and naval facilities at Brunei Bay, combined with those in the Philippines, completed a chain of mutually supporting strategic bases from which Allied air and naval forces could cover the Asiatic coast from Singapore to Shanghai, interdicting the enemy's overland communications and escape routes in Indo-China and Malaya.

Meanwhile, General Krueger began the final operations against the Japanese on Luzon when the 37th Division drove northward from Balete Pass into the Cagayan Valley. North of Baguio, our forces met stiff resistance from Japanese remnants who had gathered for a last stand among the precipitous mountains. Further north, Philippine guerrillas cleared large areas of northwest Luzon. On 21 June these forces, assisted by Rangers of the Sixth U. S. Army, captured Aparri, Luzon's northernmost port, and were astride the main road through the valley at Tuguegarao.

On 23 June a paratroop force of the 11th Airborne Division dropped just south of Aparri. This force drove 25 miles southward during the next three days to establish contact with forward elements of the 37th Division.

The seizure of the Cagayan Valley virtually terminated the campaign in Luzon, though sizable pockets of desperate Japanese remained to be eliminated. In the liberation of the Philippine Islands, General MacArthur's armies had killed by that time 317,000 and captured 7,236 Japanese against a U. S. casualty figure of approximately 60,628 killed, wounded, and missing.

On 1 July Australian forces landed at Balikpapan in southeastern Borneo. Preceded by a heavy aerial and naval bombardment, assault troops suffered only light casualties in seizing their beachheads. By the middle of July, Balikpapan Harbor was open to Allied shipping.

From California to the coast of China the vast Pacific abounded with American power. In the Philippines, the Marianas and the Ryukyus, our forces under steadily increasing reinforcements from the European continent massed for the final phase of the Pacific war. The enemy's shipping had been largely sunk or driven from the seas. The few remaining fragments of his once powerful naval force were virtually harbor-bound and the industries and communications of Japan were rapidly crumbling under the mounting tempo of our

aerial bombardment. Lord Mountbatten's forces in southeastern Asia were closing in on Malaysia and the Netherlands East Indies. Chinese armies, newly equipped, trained, and determinedly led, were gradually assuming the offensive.

The day of final reckoning for a treacherous enemy was at hand.

Final Victory

By direction of the Joint Chiefs of Staff, General MacArthur assumed command of all United States Army Forces in the Pacific on April 6. Both he and Admiral Nimitz, Commander of Naval Forces in the Pacific, were directed to prepare for the final operations against Japan. By June General MacArthur had created a new command known as the United States Army Forces in the Western Pacific under Lt. Gen. W. D. Styer to replace the old Southwest Pacific Area. General Richardson was redesignated Commander of the Army Forces of the Middle Pacific.

On 10 July the Joint Chiefs of Staff ordered another revision of the Pacific Command.

The formerly China-based 20th and 21st Bomber Commands were deactivated. The 21st became the 20th Air Force and the personnel of the 20th Bomber Command was transferred to the Eighth Air Force, which had been redeployed from Europe. General Twining, who had started in the Pacific war with the 13th Air Force in the Solomons, later moved to command of the 15th Air Force in Italy, was given command of the new 20th Air Force. General Doolittle retained command of the 8th.

Both Air Forces which now controlled the mightiest fleet of superbombers ever assembled, were combined into the U. S. Strategic Air Force, the Command which controlled the American Air assault on Germany. General Spaatz retained command of USSTAF in the Pacific. General Giles became his deputy. General LeMay, who once had commanded the B-29 fleet in China, then built up the superfortress attack in the Pacific, became his Chief of Staff.

Strategic control of the superfortress fleet remained with the Joint Chiefs of Staff with General Arnold as their agent.

During July the superbombers had steadily increased the scale of their attacks on the Japanese homeland. From the Marianas bases, the B-29's averaged 1,200 sorties a week. Okinawa airfields which now

occupied almost all suitable space on the island began to fill with heavy bombers, mediums and fighters which united in the aerial assault on the Japanese islands, her positions on the Asiatic mainland and what was left of her shipping. Fighters from Iwo Jima swept the air over the Japanese Islands, strafed Japanese dromes and communications and gave the superbombers freedom of operation. The Third Fleet augmented by British units hammered Japan with its planes and guns sailing boldly into Japanese coastal waters. The warships repeatedly and effectively shelled industries along the coasts.

These mighty attacks met little opposition. Terrific air losses during the fierce battles of Japan's interdefenses had made the enemy desperate. Knowing that invasion was not long off, he husbanded his now waning resources for the final battle. Defending the homeland the enemy had an army of 2,000,000, a remaining air strength of 8,000 planes of all types, training and combat.

General MacArthur was massing troops and planes in the Philippines and in Okinawa and in bases to the south of the Philippines for the showdown. 'He, in cooperation with Admiral Nimitz,* was preparing to execute two plans for the invasion of Japan: the first known as operation OLYMPIC, provided for a three-pronged assault on southern Kyushu in the fall of 1945 by the Sixth United States Army, consisting of the I and the XI Army Corps and the V Marine Amphibious Corps. The three groups were to land in the order named at Miyazaki, Ariaka Wan, and on the beaches west of Kagoshima to isolate the southernmost Japanese island and destroy the defending forces there. Preceding the main assault were to be preliminary operations in Koshiki Retto and a diversionary feint off Shikoku by the IX Corps.

The second phase of the Japanese invasion, operation CORONET, was to be carried out in the early spring of 1946. The Eighth and Tenth Armies, consisting of nine infantry divisions, two armored divisions and three Marine divisions were to assault the Kanto or Tokyo plain of eastern Honshu. These two veteran Pacific Armies were to be followed ashore by the First Army, which had spearheaded our victory in Europe and was now to be redeployed for the final battle of the Pacific. In this attack the First Army would have contained to infantry divisions. The three

*Naval aspects of the plans are not discussed here.

PLANNED ASSAULT ON JAPAN

armies had the mission of destroying the Japanese Army on the main home island and to occupy the Tokyo-Yokohama area. On Kyushu we would have held a one-corps reserve of three infantry divisions and one airborne. From here the plan was to fan out to the north and clean up the remainder of the Japanese islands. Supporting the clean-up would ultimately have been an air garrison equivalent to 50 groups.

These were our plans for final victory in World War II should Japan fight to a last ditch national suicide. But we had other plans which we anticipated might bring a much speedier end to the war. For years the full resources of American and British science had been working on the principle of atomic fission. By the spring of this year we knew that success was at hand. While President Truman was meeting with the British Prime Minister and Generalissimo Stalin at Potsdam, a new and terrible bomb was taken to a deserted area of New Mexico and detonated. The results were even more terrifying than was anticipated. A report was rushed to the Secretary of War and the President at Potsdam, Germany, and it was decided to use this weapon immediately in an effort to shorten the war and save thousands of American lives. From Potsdam General Spaatz received orders to drop the atomic bomb on the industrial installations of one of four selected cities from which he could make his own selection according to weather and target any time after the 3d of August. He chose the military base city of Hiroshima.

On 6 August the bomb was dropped. The results are well known.

Two days later the Soviet Union declared war on Japan and within a few hours the Red Army was again on the march, this time driving with powerful blows into the pride of Japanese military power, the Kwantung Army of Manchuria. The first Red offensives were across the Manchuria borders and southward on the island of Sakhalin. The advance by the Red divisions was swift. They struck first to isolate Manchuria and then Korea. In rapid thrusts from outer Mongolia and Trans Baikal, the Soviet forces drove deep into Manchuria and struck the Khinghan range, captured the communications center and bases at Hailar and crossed the Khinghan barrier into Harbin, key city of central Manchuria. To the south strong mobile forces crossed the desolate Gobi desert toward southern Manchuria.

Then, on 9 August, the Strategic Air Forces loosed a second atomic bomb on Nagasaki, which displayed greater destructive blast and fire than the Hiroshima bomb. The smoke of the Nagasaki detonation rose 50,000 feet into the air and was visible for more than 175 miles.

The week of 6 August had been one of swift and sudden disaster to the nation which fired the first shot in the series of conflicts that led to World War II. Japan was being made to pay in full for her treacheries at Mukden and at Shanghai, at Pearl Harbor and at Bataan. The enemy situation was hopeless. On 10 August the Japanese Government sued for peace on the general terms enunciated by the Allied powers at the Potsdam Conference.

ORDER OF BATTLE U. S. ARMY FORCES IN THE PACIFIC (AS OF 14 AUGUST 1945)

<i>Unit</i>	<i>Commander</i>	<i>Location</i>
General Headquarters, U. S. Army Forces in the Pacific.	General of the Army Douglas MacArthur.	Manila, Luzon, Philippine Islands.
Sixth Army	Gen. Walter Krueger	Luzon, Philippine Islands.
40th Infantry Division	Brig. Gen. D. J. Myers	Panay, Philippine Islands.
11th Airborne Division	Maj. Gen. J. M. Swing	Luzon, Philippine Islands.
I Corps	Maj. Gen. I. P. Swift	Luzon, Philippine Islands.
25th Infantry Division	Maj. Gen. C. L. Mullins	Luzon, Philippine Islands.
33d Infantry Division	Maj. Gen. P. W. Clarkson	Luzon, Philippine Islands.
41st Infantry Division	Maj. Gen. J. A. Doe	Mindanao, Philippine Islands.
IX Corps	Maj. Gen. C. W. Ryder	Leyte, Philippine Islands.
77th Infantry Division	Maj. Gen. A. D. Bruce	Cebu, Philippine Islands.
81st Infantry Division	Maj. Gen. P. J. Mueller	Leyte, Philippine Islands.
XI Corps	Lt. Gen. C. P. Hall	Luzon, Philippine Islands.
43d Infantry Division	Maj. Gen. L. F. Wing	Luzon, Philippine Islands.
Americal Infantry Division	Maj. Gen. W. H. Arnold	Cebu, Philippine Islands.
1st Cavalry Division	Maj. Gen. W. C. Chase	Luzon, Philippine Islands.
Eighth Army	Lt. Gen. R. L. Eichelberger	Leyte, Philippine Islands.
93d Infantry Division	Maj. Gen. H. H. Johnson	Morotai Island, New Guinea, and Philippine Islands.
96th Infantry Division	Maj. Gen. James L. Bradley	Okinawa, Ryukyus Islands, and Mindanao, Philippine Islands.
X Corps	Maj. Gen. F. C. Sibert	Mindanao, Philippine Islands.
24th Infantry Division	Maj. Gen. R. B. Woodruff	Mindanao, Philippine Islands.
31st Infantry Division	Maj. Gen. C. A. Martin	Mindanao, Philippine Islands.
XIV Corps	Lt. Gen. O. W. Griswold	Luzon, Philippine Islands.
6th Infantry Division	Maj. Gen. C. E. Hurdiss	Luzon, Philippine Islands.
32d Infantry Division	Maj. Gen. W. H. Gill	Luzon, Philippine Islands.
37th Infantry Division	Maj. Gen. R. S. Beightler	Luzon, Philippine Islands.
38th Infantry Division	Maj. Gen. F. A. Irving	Luzon, Philippine Islands.
Tenth Army	Gen. J. W. Stilwell	Okinawa, Ryukyus Islands.
XXIV Corps	Lt. Gen. J. R. Hodge	Okinawa, Ryukyus Islands.
7th Infantry Division	Maj. Gen. A. V. Arnold	Okinawa, Ryukyus Islands.
27th Infantry Division	Maj. Gen. G. W. Griner, Jr.	Ie Shima and Okinawa, Ryukyus Islands.
U. S. Army Forces, Middle Pacific	Lt. Gen. R. C. Richardson, Jr.	Oahu, Hawaiian Islands.
98th Infantry Division	Maj. Gen. A. M. Harper	Oahu, Hawaiian Islands.
U. S. Army Forces, Western Pacific	Lt. Gen. W. D. Styer	Luzon, Philippine Islands.
Far East Air Forces	Gen. G. C. Kenney	Okinawa, Ryukyus Islands.
Fifth Air Force	Lt. Gen. E. C. Whitehead	Okinawa, Ryukyus Islands.
Seventh Air Force	Brig. Gen. T. D. White	Saipan, Marianas Islands.
Thirteenth Air Force	Maj. Gen. P. B. Wurtsmith	Leyte, Philippine Islands.

ORDER OF BATTLE U. S. ARMY STRATEGIC AIR FORCES (AS OF 14 AUGUST 1945)

Headquarters, U. S. Army Strategic Air Forces, Guam, Marianas Islands:	
Commanding General	Gen. Carl Spaatz.
Deputy Commander	Lt. Gen. B. McK. Giles.
Chief of Staff	Maj. Gen. C. E. LeMay.
Eighth Air Force, Okinawa, Ryukyus Islands.	
Commanding General	Lt. Gen. James H. Doolittle.
Twentieth Air Force, Guam, Marianas Islands:	
Commanding General	Lt. Gen. Nathan F. Twining.

This is the areas in which World War II both began and finally ended. With her cities leveled by fire bombs and atomic explosion, her Armies in Asia reeling under the blows of the Red divisions and American power demanding for aversion, Japan made final payment on the cash register of Mukden, Shantung, Pearl Harbor, and Manchuria.

This is the areas in which World War II both began and finally ended. With her cities leveled by fire bombs and atomic explosion, her Armies in Asia reeling under the blows of the Red divisions and American power demanding for aversion, Japan made final payment on the cash register of Mukden, Shantung, Pearl Harbor, and Manchuria.

The Japanese launched first carrier night bombardments of Okinawa on 24-25 and 26-27 April 1944. The assault was planned by Superfortresses based in the Marianas on 24 November 1944. The Navy began its carrier strikes that day as the Japanese fleets the safety of its home harbors on 16 February 1945. In July the coastal cities of Japan came under the guns of our warships and on 6 August the mightiest blow of warfare, the first atomic bomb, was dropped on the military base city of Hiroshima.

Two days later the Soviet Union joined the assault on Japan. A second atomic bomb blasted Nagasaki on 9 August. Within 24 hours the aggressor nation that had fired the first shot of the series of Wars that led up to the greatest of all conflicts used for the Peace had so flagrantly broken.

OCCUPATION

Orderly civil administration must be maintained in support of military operations in liberated and occupied territories. In previous wars, the United States had no prepared plan for this purpose. In this war it was necessary to mobilize the full resources of both liberated and occupied countries to aid in defeating the enemy. The security of lines of communication and channels of supply, the prevention of sabotage, the control of epidemics, the restoration of production in order to decrease import needs, the maintenance of good order in general, all were factors involved. It was important to transform the inhabitants of liberated countries into fighting allies.

The Civil Affairs Division was created on 1 March 1943 to establish War Department policies designed to handle these problems. In joint operations, the Division works closely with a similar agency in the Navy Department, as well as with related civilian agencies to determine and to implement United States policies. The Army and Navy are represented on the Joint Civil Affairs Committee under the Joint Chiefs of Staff which is charged with planning for civil affairs in both Europe and the Pacific. In combined operations, United States policies are coordinated with those of the British through the Combined Civil Affairs Committee of the Combined Chiefs of Staff.

Army officers were trained at the School of Military Government established at the University of Virginia and at Civil Affairs training schools to serve in military government and civil affairs activities in the field. The operation of these schools is a responsibility of The Provost Marshal General, under directives prepared by the Civil Affairs Division.

In French North Africa the civil administration was conducted by the French Government. The British managed civil affairs in the territory east of the Tunis-Tripoli border.

In Sicily for the first time, civil affairs officers, American and British in equal numbers, went ashore with assault troops. For the remainder of the Sicilian campaign these officers accompanied combat troops into towns and areas where their services were necessary. In the initial stages of the Sicilian campaign, military government was a responsibility of combat commanders, and civil affairs officers went with fighting troops

to take the burden of dealing with the civil populace off the commander's shoulders. They organized the civil administration so as to secure the cooperation of the Sicilians, and thus relieve tactical commanders from the necessity of diverting detachments from combat troops for security. Allied Military Government of Occupied Territories was extended in Sicily as rapidly as the enemy was cleared from a community.

A similar procedure was followed in the early phases of the invasion of the Italian mainland. Civil affairs officers, attached to the 15th Army Group, were placed under the commanding generals of the Fifth and Eighth Armies. A mobile Allied Military Government headquarters moved with each army.

After Italy capitulated and became a cobelligent against Germany, the Allied Control Commission for Italy was established by the Combined Chiefs of Staff to supervise the activities of the Italian Government and to insure that the terms of the surrender were observed. The Supreme Allied Commander in the Mediterranean Theater is president of the Commission. Originally, it was a United States-British military agency. Now the percentage of civilian personnel is progressively increasing. Early in 1945 the Allies re-established diplomatic relations with Italy and since that time diplomatic representatives have dealt with political matters. The major portion of the Italian peninsula has been transferred from the control of AMG to that of the Italian Government.

Experience gained in Sicily and Italy and practices followed there have been utilized in all subsequent operations.

Public safety, health, supply, agricultural, and other experts in the various phases of civil affairs accompanied the invasion forces into Sicily and Italy. The security of the armies and their property, the protection of local resources for the use of the armies, and the keeping of public order were achieved by public safety officers who worked largely through the Royal Carabinieri and other Italian police. Emergency civilian relief supplies, food, medicine, soap, and coal were accumulated in North Africa before and during the Italian campaign. They were supplemented by shipments from the United Kingdom and the United States. In one year more than two million long tons of relief

supplies were distributed in Italy. However, scarcity of food remained the most difficult civil affairs problem in that country. This was complicated by the Fascist-born black market, by lack of shipping space for non-military goods, and by partial paralysis of inland transportation facilities which had been crippled by the enemy and by Allied bombings. Yet the bread ration rose from 125 to 200 grams, and finally to 300.

Conditions favorable to epidemics were created by undernourishment, lack of soap and water, broken sewers, dead animals, overcrowding, and refugees. The united efforts of the medical personnel of the armies and the public health experts of AMG, who directed and assisted the Italian medical profession, kept epidemics under control. Outbreaks of typhus were suppressed. The public was informed of the danger from rodents and vermin as plague carriers. Refugees were deloused. Demolished water supply and sewer systems were restored. The services of a few experts prevented malaria from levying a heavy toll on our fighting men.

Many fugitives from Nazi oppression, chiefly Yugoslavs, had escaped into Italy. They have been cared for by the Army, and thousands have been evacuated to the Near East. A camp, capable of housing a group of 40,000 displaced persons, was opened by the Army at Philippeville, Algeria, and approximately 1,000 such refugees have been established in a temporary camp at Oswego, N. Y.

Upon recommendation of the American Commission for the Protection and Salvage of Artistic and Historic Monuments in War Areas, selected officers were assigned to the Mediterranean and European Theaters to furnish technical advice on the preservation and restoration of art and archives. As a result of a concerted program of education, troops have been able to save many priceless works from destruction.

In France and other liberated countries of Northwestern Europe, the aims and activities of civil affairs personnel were the same as in Italy. However, special conditions required revised methods. In Italy there was a progressive movement from full military government toward looser forms of control, including increased participation by civilians and the Italian Government. In the European Theater of Operations, civil affairs personnel was required to shift abruptly from cooperative management of civil affairs in liberated areas to full blown military government in Germany.

The War Department coordinated negotiations on

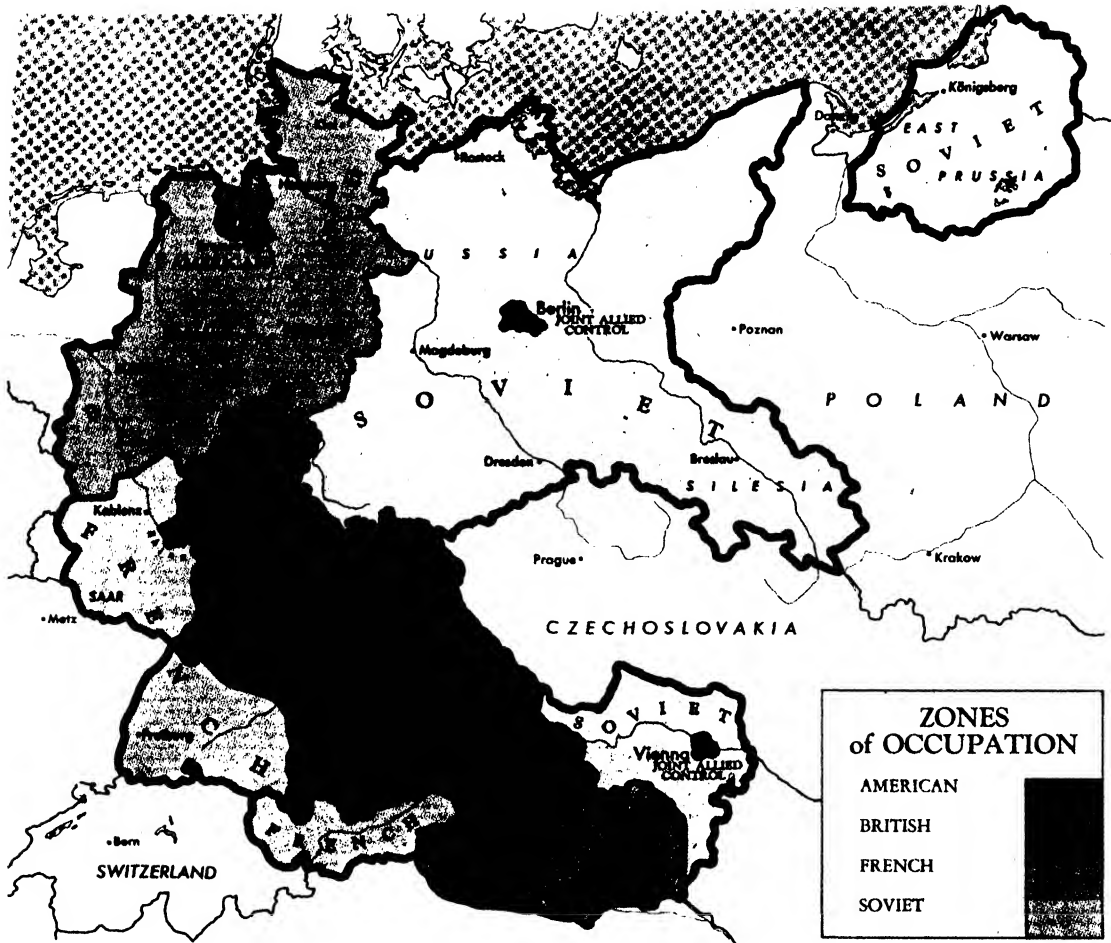

the United States military level with the French Committee of National Liberation. They drew up agreements for the administration of civil affairs and, after approval by the U. S. Joint Chiefs of Staff, these were signed by General Eisenhower for the United States and General Koenig for the French Committee. The British executed a similar agreement on a governmental level.

Under these agreements, civil affairs in Corsica and France were effected through a French Delegate acting in accordance with French law. Later General Eisenhower was represented by a SHAEF Military Mission in France. The French civil administration cooperated effectively and it was unnecessary for General Eisenhower to invoke his paramount powers of control even in forward areas. So well did this understanding work that, as early as 24 October 1944, a zone of interior was proclaimed in France, which had the effect of formally restoring practically complete control over all governmental problems to the French Provisional Government. United States and United Kingdom officials had the aid of French officers in helping the armies keep their lines of communication open and supplies flowing forward. The French Provisional Government furthered the campaign in a variety of ways. During the autumn rains, "duckbill" type tread extensions were needed to give tanks better traction on muddy terrain. The French contributed 600 tons of their sparse steel stocks to make 400,000 "duckbills". They provided storm boats for the spring campaign requiring river crossings. It has been estimated that by the end of February 1945 the French Provisional Government had made available to the Allies supplies, labor, services, installations, transportation, and other facilities valued at approximately 225 million dollars.

Prior to the invasion of Normandy, the Governments of Belgium, Luxembourg, the Netherlands, and Norway had military missions attached to the staff of the Supreme Allied Commander in London. As these governments were reestablished on the continent, General Eisenhower designated a SHAEF Military Mission to each nation.

In Albania, Greece, and Yugoslavia, the interests of the United States in the administration of civil affairs is limited to the activities concerned with relief and rehabilitation.

Since D-day in Europe, our military authorities have carried out a civilian relief import program for the liberated peoples of Europe in coordination with

the British. The relief supplies have consisted mostly of limited quantities of food, medical supplies, clothing and fuel. The United States share of this program, exclusive of petroleum products, for the northwest Europe and the Mediterranean areas, is approximately 3,900,000 tons for the year ending 30 June 1945.

In addition to imports of specific supplies for the civilian populations, the military authorities have actively assisted the liberated countries in the construction or repair of railroads, highways, and bridges, the reactivation of public utility services, and the construction or repair of port facilities and inland waterways. The Army has also been of assistance to the liberated governments in its efforts to aid in the resumption of essen-

tial industries such as coal mining, fishing, and others which would provide supplies to further the military effort and reduce shipping required for relief imports.

Military responsibility for provision of civilian supplies, except coal, for France was terminated 1 May 1945. It is expected that termination of military responsibility for furnishing civilian supplies throughout liberated northwest Europe, including coal for France, will be terminated on or about 1 September 1945.

The American Armies have accumulated so great a crop of prisoners that their handling has been a problem of immense complexity. Following the termination of hostilities in Europe our forces were holding 130,000 Italian prisoners and 3,050,000 German prison-

ers as well as an additional 3,000,000 German troops who were disarmed after the unconditional surrender. Of these, 370,000 German and 50,000 Italian prisoners are in the United States and Hawaii, and their disposition is a matter of immediate concern. It is the policy of the War Department to return to Europe all prisoners held in the United States as soon as this movement is practicable logistically.

The total capture in combined European operations has been divided equally between the United States and the British Commonwealth Governments. In addition to those prisoners who were the direct responsibility of the United States, this Government agreed to take 175,000 of the British captures with the understanding they would be returned as soon as possible.

The country has benefited from the utilization of the labor of these prisoners of war. Our critical manpower shortage has been relieved by 62,075,800 prisoner working days; the U. S. Treasury has been enriched by \$35,196,800 paid by private contractors for this labor. In addition, their use on military installations has an estimated value of \$108,825,469. After the capitulation of Italy, 110,000 Italian prisoners volunteered for Italian Service Units which perform noncombatant work helpful to the Allied war effort.

In the utilization of prisoners of war in continental United States, under the direction of The Provost Marshal General, the principle has been followed that such labor will not be permitted to compete with American civilian labor or to impair American wage standards and working conditions. Before a private contractor may employ prisoner of war labor, he must obtain from either the War Manpower Commission or the War Foods Administration a certification that civilian labor is not available for the project.

The policy of the United States with respect to treatment to be accorded to prisoners of war held by this country is in accordance with Geneva Prisoners of War Convention, which was ratified by the United States on 16 January 1932, and thus has the power of law. In following the provisions of the convention, the enemy prisoners have received firm treatment. At the same time a program of reorientation has been instituted to impress upon prisoners the vitality and strength of democratic institutions in the United States.

Prior to the unconditional surrender, military government in Germany was established by General Eisenhower throughout the areas occupied by his forces. Military government detachments followed in the wake

of the advancing armed forces and established rigid control over the civil population, taking the first steps necessary to reestablish German administration free from Nazi influence. Some 5,500,000 displaced civilians and liberated United Nations prisoners of war were uncovered in Germany. By the end of June nearly 3,000,000 had been repatriated to their home lands. Suspected war criminals and persons whose freedom might endanger the security of the occupying forces were taken into custody.

The remarkable efficiency of handling both prisoners and displaced persons along the routes of an advancing victorious army was the fruit of an intensive effort to establish a new conception in the organization of military police. Our experience in the old AEF indicated that a highly trained military police force could be of tremendous value to military operations. Up to that time military police were used simply to enforce discipline and the regulations to which troops were subject. A careful study of World War operations coupled with experience in the first maneuvers brought the concept of using military police for helpful control of military traffic moving to and during battle. For this purpose special training schools were established by the Provost Marshal General. Insofar as possible older men were selected for the training. The returns on this effort were especially rich in the drive across France which heavily depended on the forwarding of the troops and supplies which had been put ashore in Normandy. Later in the collapse of German resistance the military police performed miracles in regulating the dense, rather chaotic traffic on the roads, burdened with combat troops and their supplies surging forward and millions of prisoners or displaced persons straggling in the opposite direction.

With the unconditional surrender of the German armed forces on 8 May, rigid military government was established throughout the whole of General Eisenhower's area of responsibility. The redeployment of forces into the national zones of occupation agreed upon by the four powers in the European Advisory Commission began. On 5 June General Eisenhower met in Berlin with Field Marshal Montgomery, Marshal Zhukov, and General De Lattre and on behalf of the United States signed the declaration by which the four governments assumed supreme authority and power in Germany. The Control Council in Germany was set up in accordance with the four-power protocol of the

European Advisory Commission. At the end of June, General Eisenhower's responsibility as a Supreme Allied Commander for military government in Germany terminated and, as Commander in Chief of the United States Occupation Forces in Germany, he became responsible for the military government of the United States zone of occupation. The United States zone of occupation includes the whole of Bavaria, Wurtemberg, Hesse and Hesse-Nassau, and the northern portion of Baden, and, in addition, a portion of Berlin and the ports of Bremen and Bremerhaven. Lieutenant General Lucius DuB. Clay serves as Deputy Military Governor of the United States zone and as General Eisenhower's representative on the Coordinating Committee of the Control Council. He is assisted by a staff of specially chosen civilian and military experts.

In the closing days of the German campaign Allied Military Government was established in Austria. Officers and men, especially trained to deal with the problems of Austria, accompanied the tactical forces into those portions of the country occupied by United States, British, and French forces and took over control of all civil affairs. The military government in Austria differs substantially from that in Germany. Although the program of denazification and demilitarization of Germany is being extended in Austria, the United Nations will endeavor to promote conditions which will lead to the establishment of a free and independent Austria. Allied control in Austria is conducted through quadripartite administration by Soviet, British, French, and United States commanders, each of whom has been made responsible for a zone of occupation. Combined command of United States and British forces in Austria has been terminated. Matters of concern to Austria as a whole are dealt with by the four national commanders sitting in Vienna. General Clark has been designated the Commanding General of United States forces in Austria and, as such, will be the United States representative on the Governing Body of the Allied Administration in Austria. Though

Austria has become a part of the European Theater of Operations, General Clark, in his role as the United States representative in the Allied Administration in Austria, is responsible directly to the United States Joint Chiefs of Staff.

The liberation of the Philippines would have involved major problems of civil affairs had the Commonwealth Government and local officials of inflexible loyalty not shown from the very first landings immediate competence to reorganize administration and re-establish orderly government. By agreement with the Commonwealth Government it has been understood throughout the whole of the Philippine campaign that military responsibility for civil affairs was limited to the provision of necessary emergency relief to the population. Through military channels 140,000 tons of civil relief supplies were shipped to the Philippines between November 1944 and 1 July 1945.

The first major operation requiring the establishment of military government over large numbers of Japanese people was at Okinawa. In that testing ground of policies, for the main islands of Japan, valuable experience was gained by military government personnel of the Army working with naval personnel.

The capitulation of Japan has been followed by the occupation of various strategic portions of the four main Japanese Islands by Allied Forces under the supreme command of General MacArthur.

An important element of the surrender was the clear statement by the Allied Powers that from the moment of the capitulation, the Emperor and the Japanese Government would be under the absolute authority of the Supreme Commander. Initially, military government has not been established in the same manner as in Italy or Germany. The will of the Allied Powers as exemplified in the surrender instrument is being imposed upon the Japanese through the channel of the Emperor and the Japanese governmental machinery.

OUR WEAPONS

THE Nation's state of unpreparedness along with that of the British Empire gave the Axis nations an overwhelming initial advantage in matériel. The Japanese campaigns in China, the Italian campaign in Ethiopia, and the participation of German and Italian troops in the Spanish Civil War afforded these enemies an opportunity to test their new weapons on the battlefield. This is a matter of very great importance, preliminary to decisions for quantity production of any weapon. Since we had some time in which to mobilize our resources, the vastly superior industrial establishment of the United States eventually overcame the initial advantage of the enemy.

During the past two years the United States Army was well armed and well equipped. The fact is we dared to mount operations all over the world with a strategic inferiority in numbers of troops. Were it not for superiority in the air and on the sea, in mobility and in firepower we could not have achieved tactical superiority at the points chosen for attack nor have prevented the enemy from bringing greater forces to bear against us.

From the time of the landing in France to the time the Allies had reached the German frontiers, the German armies of the West exceeded numerically the attacking forces. General MacArthur invaded the Philippines with a lesser force than that with which the Japanese held the islands. In the immediate strategic area Japanese strength far outnumbered us. By no other criterion can the quality and quantity of our weapons better be judged. Yet we were in some instances outdone by both Germany and Japan in the development of specific weapons. It is truly remarkable that our superiority was as general and as decisive as it proved to be.

Overshadowing all other technological advance of the war was the Allied development of the atomic explosive. The tremendous military advantage of this terrifying weapon fell to us through a combination of good luck, good management and prodigious effort. The harnessing of atomic power should give Americans confidence in their destiny but at the same time we must be extremely careful not to fall victim to overconfidence. This tremendous discovery will not be ours exclusively indefinitely. In the years of peace

between the two world wars we permitted Germany to far outpace us in the development of instruments which might have military use. As a consequence German development of long-range rockets and pilotless aircraft, stemming from years of peacetime research, was far more advanced than our own, which began in earnest only after the war had already started. The fact that we overtook Germany's head start on the atomic explosive is comforting, but certainly should not lull us again into a state of complacent inertia.

In the development of aircraft and ships U. S. factories and productive "know-how" soon gave the Allies both a qualitative and quantitative advantage over Germany and Japan. By the time the great air battles of Europe and the far Pacific were joined, U. S. planes were superior in numbers and types to the enemy's. Our development of the long-range heavy bomber, now exemplified by the B-29, has been unmatched. The Germans themselves admit they did not even foresee our developments in the long-range fighter. They first introduced the jet engine in combat, but this was not because we had made no progress in this field. By the time their jet fighters were ready to take the air, the only areas in which they could give them operational tests were swept by our fighters. They had either to test them in combat or not at all. The German jet fighters were limited to a maximum endurance of a little over an hour. Ours already had the endurance to fly nonstop from San Francisco to New York.

Another noteworthy example of German superiority was in the heavy tank. From the summer of 1943 to the spring of 1945 the German Tiger and Panther tanks outmatched our Sherman tanks in direct combat. This stemmed largely from different concepts of armored warfare held by us and the Germans, and the radical difference in our approach to the battlefield. Our tanks had to be shipped thousands of miles overseas and landed on hostile shores amphibiously. They had to be able to cross innumerable rivers on temporary bridges, since when we attacked we sought to destroy the permanent bridges behind the enemy lines from the air. Those that our planes missed were destroyed by the enemy when he retreated. Therefore our tanks could not well be of the heavy type. We designed

our armor as a weapon of exploitation. In other words, we desired to use our tanks in long-range thrusts deep into the enemy's rear where they could chew up his supply installations and communications. This required great endurance—low consumption of gasoline and ability to move great distances without break-down.

But while that was the most profitable use of the tank, it became unavoidable in stagnant prepared-line fighting to escape tank-to-tank battles. In this combat, our medium tank was at a disadvantage, when forced into a head-on engagement with the German heavies. Early in 1944 it was decided that a heavy American tank, on which our Ordnance experts had been continuously experimenting since before the war, must be put into mass production. As a result the M-26 (Pershing) tank began to reach the battle lines last winter. This tank was equal in direct combat to any the Germans had and still enjoyed a great advantage in lighter weight (43 tons), speed, and endurance. At the same time work was begun on two new models, the T-29 and T-30, which weighed 64 tons, one mounting a high-velocity 105-mm rifle, the other a 155-mm rifle.

Following the fierce fighting in North Africa and in the Papuan campaign in New Guinea, it became clear that our lack of preparedness and research in military instruments during peacetime would have to be overcome by extreme measures. Accordingly, in the late spring of 1943 I selected an expert ordnance officer, Col. William A. Borden, and directed him to work under me independently of normal War Department channels in the development and modification of weapons and improved techniques. His first efforts were devoted to increasing the effectiveness of our weapons against the Japanese in jungle fighting. As a result, the 105-mm and 155-mm mortars, flame throwers, ground rockets, improved launching devices, skid pans for towing heavy artillery in mud, improved bazooka ammunition, and colored smoke grenades were developed and the production and shipment to the theaters were expedited.

Later the Secretary of War decided to establish a division of the War Department Special Staff to be charged with coordinating the experience of our troops in the field with the Nation's scientific developments in order to keep us abreast in the race for newer and more deadly means for waging war. The New Developments Division was organized by Maj. Gen. Stephen G. Henry in October 1943. Officers were sent

to the theaters to observe troops in combat to search for ways in which to apply our civilian scientific knowledge to the problems of the battlefield. They then returned and coordinated and expedited experimentation with new types of weapons and equipment by the appropriate Army Service Forces agency. When some item was developed it was taken to the theaters for trial and if successful put into production. Some examples: flame-throwing tanks, air rockets, improved ground rockets, self-propelled heavy artillery and electronic devices for locating enemy mortar and gun positions.

In addition, the New Developments Division studied and interpreted the intelligence available on new enemy weapons, particularly the proposed targets for air bombardment of the V-1 launching sites and supply channels to them. The air reduction for these sites so seriously interfered with the effectiveness of the V-1 that its threat to the invasion of France never materialized.

In August 1944 Brig. Gen. Borden succeeded General Henry as Chief of the New Developments Division when the latter officer was appointed Chief of the Personnel Division of the War Department General Staff. Special emphasis was then placed on the development of guided missiles, heavy tanks, recoilless artillery, rockets, radar, and night viewing devices, as well as expediting the production and shipment overseas of improved types of many of our new weapons or devices.

In most respects, our battle clothing was as good as can be supplied to any soldier of any country. The "layering" principle saves the greatest possible protection, and at the same time the greatest freedom of movement. The rubber-bottomed, leather-topped shoepac, worn with heavy ski socks and a felt inner-sole, overcame the heavy incidence of trench foot among our troops fighting in cold and extremely wet climates. No clothing has ever been invented that will make the exposure men must endure in combat pleasant. It has been possible only to develop sufficient protection to prevent large-scale casualties from such exposure. This we accomplished both in Europe and in the battlefields of the East. The principal difficulty in meeting this problem was control of the wasteful habits of our men in their use and misuse of the clothing and equipment issued.

The American Army was unquestionably better fed than any in history. However, feeding in combat can never be like that in garrison or cantonment, nor remotely like home cooking. Field rations must be non-

perishable, compact, and easily carried by the individual soldier. The problem of providing troops with appetizing food has plagued armies down through the centuries. The development of field rations for the United States Army in this war was almost revolutionary. The combat rations "C" and "K" were given a range of variety that combat troops would not have dreamed of a few years ago. The "C" ration, the subject of much amusing criticism, was supplied with 10 different meat components: meat and beans; meat and vegetable stew; meat and spaghetti; ham, eggs, and potatoes; meat and noodles; meat and rice; frankfurters and beans; pork and beans; ham and lima beans; and chicken and vegetables. These were rations that could be made available to men actually under heavy fire. Where there was more time for the preparation of food, troops were given the "10-in-1" ration which contains canned vegetables and fruits, canned desserts, chocolates and other candies, roast beef, roast pork and similar meat components, even canned hamburgers. When troops in the field were not under fire, they were fed the "B" ration which offered a wide selection considering the circumstances. Since under conditions where the "B" ration was fed, there were usually few, if any, facilities for refrigeration and preserving foods, this ration was composed of canned vegetables, meats, fruits, and dehydrated potatoes and eggs and similar items. It certainly did not compare with the fresh eggs and meats and vegetables common to the American family table, but it was a vast improvement over past issues of campaign rations. In the rear areas where food could be shipped quickly and preserved under refrigeration, the "A" ration was fed. This is as good food as can be served large numbers of men. Compared with these American Army rations was the Japanese ration of 1½ pounds of rice and small quantities of meat or fish a day. The Japanese soldier, however, thrived on this diet because he had been accustomed to little more at home.

In major ground campaigns to destroy the enemy's forces and end his resistance, such as we fought in North Africa, Italy, France, and Germany, one of the basic factors in the final decision is the armament and equipment of the infantry divisions and the manner in which they are employed. A nation with the belligerent tradition of Germany, concentrating its resources on a powerful army and enjoying every initial advantage from years of preparation for war, should have the upper hand in many if not all of the basic infantry weapons.

In two of these basic items the German Army held an advantage almost to the end of the war. The first was the triple-threat 88-mm rifle which our troops first encountered in North Africa. Even at that time the U. S. Army had a similar weapon, the 90-mm rifle, with greater penetrating power but the Germans had theirs on the battlefields and in quantity, with the "bugs" worked out in previous battle experience over a period of years. The United States forces did not have the 90-mm in quantity at the time and were compelled to work out its shortcomings in opposition to a proven weapon.

As a result the 88 was a powerful German weapon, ahead of ours in quantity and technique almost to the end of the war. In the Spanish Civil War the Germans were careful to conceal the role of the 88 as an antitank and antipersonnel weapon, revealing it only as an antiaircraft piece. When we first encountered it, it was serving all three purposes with deadly effect. A single 88 could fire several rounds of armor-piercing shells at our tanks, then suddenly begin firing air-bursting fragmentation shells at our infantry following their tanks, and a few minutes later throw up an anti-aircraft fire at planes supporting the ground operation. The 90-mm rifle had no such flexibility. It could not be depressed low enough for effective antitank fire. Our technique of handling the gun had not been sufficiently developed so that interchangeable ammunition was available to the gun when it was needed, and we did not have the numbers of the weapons the Germans had.

A second marked German advantage during most of the European war was in powder. German ammunition was charged with smokeless, flashless powder which in both night and day fighting helped the enemy tremendously in concealing his fire positions. United States riflemen, machine gunners, and gunners of all types had to expose their positions with telltale muzzle flashes or puffs of powder smoke. German preparations had given them time to develop this high-grade powder and manufacture tremendous quantities of it. They had it there and they used it. These facts should be considered along with our policy regarding the manufacture of explosives after the last war and the scientific development that should or would have followed in the plants of the great commercial manufacturers had they not been subjected to bitter attack as "Merchants of death."

Careful planning and husbandry of the Army's

meager peacetime resources and the nature of this Nation's machine economy gave the American armies in Europe two good advantages over the German enemy. One of ours was the Garand semi-automatic rifle, which the Germans were never able to duplicate. It is interesting to trace the planning and decisions that gave us the Garand rifle and the tremendous small arms fire power that went with it, noting especially that the War Department program for the Garand was strenuously opposed.

The base of fire of a rifle platoon is its automatic weapons. The riflemen concentrate their fire on the impact area blocked out by the automatics. The base of fire of a United States rifle squad in this war has been its Browning automatic rifle. Prior to the war the Army had several hundred thousand of these weapons in war reserve. The developments of the war indicated it might be well to replace the automatic rifle with another type of small automatic weapon, but if we had, we would have jammed production facilities, replacing a type of weapon already in stock. Instead, it was decided to modify the automatic rifle and devote production to the Garand rifle.

The Germans, on the other hand, shifted their rifle squad automatic weapon to a new type of light machine gun developed just before the war. Their standard rifle at the end of the war was still bolt-operated. They had produced a few semi-automatic rifles but they were never effective and did not reach the battlefield in numbers. In their efforts to improve the firepower of their infantry, the Germans then beat us to quantity production of the machine pistol, which we did not have in large numbers on the battlefields until well near the end of the European war. Our superiority in infantry firepower, stemming from the use of the semi-automatic rifle, was never overcome.

The greatest advantage in equipment the United States has enjoyed on the ground in the fighting so far has been in our multiple-drive motor equipment, principally the jeep and the 2½-ton truck. These are the instruments which have moved and supplied United States troops in battle while the German Army, despite the fearful reputation of its "panzer armies" early in the war still depended heavily on animal transport for its regular infantry divisions. The United States, profiting from the mass production achievements of its automotive industry, made all its forces truck-drawn and had enough trucks left over to supply the British armies with large number of motor vehicles and send tremendous quantities to the Red Army.

The advantage of motor vehicle transport did not become strikingly clear until we had reached the beaches of Normandy. The truck had difficulty in the mountains of Tunisia and Italy, but once ashore in France our divisions had mobility that completely outclassed the enemy. The Germans discovered too late the error of the doctrine which a member of their general staff expressed to General Wedemeyer, then in Berlin, in the late thirties: "The truck has no place on the battlefield." He meant by this that an unarmored vehicle was too vulnerable to be brought within immediate fire areas.

The appearance of an unusually effective enemy weapon, or of a particularly attractive item of enemy equipment usually provoked animated public discussion in this country, especially when stimulated by criticism of the Army's supposed failures to provide the best. Such incidents posed a very difficult problem for the War Department. In the first place, the morale of the fighting man is a matter of primary importance. To destroy his confidence in his weapons or in the higher command is the constant and intense desire of the enemy. The American soldier has a very active imagination and usually, at least for the time being, covets anything new and is inclined to endow the death-dealing weapons of the enemy with extraordinary qualities since any weapon seems much more formidable to the man receiving its fire than to the man delivering it. If given slight encouragement, the reaction can be fatal to the success of our forces. Commanders must always make every effort to show their men how to make better, more effective use of what they have. The technique of handling a weapon can often be made more devastating than the power of the weapon itself. This was best illustrated by the correct, the intended, tactical employment of the United States medium tank.

Another factor involved is the advantage given to the enemy by informing him which of his weapons is hurting us most. And along with this goes the similar embarrassment of not wishing to disclose to the enemy the state of the measures you are most certainly taking to correct any demonstrated weakness in a particular weapon or in armament generally. If a machine gun is found to jam after one or two bursts or at high altitudes you don't give the enemy this important information. Nor do you wish to sacrifice surprise by advising him in advance of the improved weapon to come or actually in process of deployment.

In some of the public discussions of such matters, criticism was leveled at the Ordnance Department for not producing better weapons. This Department produced with rare efficiency what it was told to produce, and these instructions came from the General Staff of which I am the responsible head, transmitting the resolved views of the officers with the combat troops or air forces, of the commanders in the field.

In the other categories of weapons and equipment of the infantry divisions, machine guns, mortars, artillery, individual equipment, the United States and the German armies were so nearly equal that neither had any marked advantage. The German infantry rocket, the Panzerfaust, had greater hitting power than the United States bazooka which had been developed first. We believe that our use of massed heavy artillery fire was far more effective than the German techniques and clearly outclassed the Japanese. Though our heavy artillery from the 105-mm up was generally matched by the Germans, our method of employment of these weapons has been one of the decisive factors of our ground campaigns throughout the world.

In the field of aircraft armament, United States matériel was excellent. The .50-caliber aircraft machine gun was one of the most reliable weapons of the war. The latest version of this gun had a cyclic rate of 1,200 rounds a minute. The German 30-mm aircraft cannon had as an American counterpart a 37-mm aircraft cannon. The newest version of this United States weapon had a velocity of 3,000 foot-seconds. The Japanese primarily used a 37-mm gun built on obsolete design principles. The 75-mm aircraft cannon which some United States planes carry was a heavier gun than any other air force has ever mounted.

American bombs and the newest fusing and control devices which guide them to their targets had no counterpart. United States heavy military equipment such as tractors, earth-moving machinery, railroads and rolling stock, bridging equipment, and similar items stood the test of battle splendidly.

Radar equipment developed by the United States and Britain was superior to the electronics devices of either Germany or Japan. Our radar instruments, for example, which tracked aircraft in flight and directed the fire of anti-aircraft guns was more accurate than any possessed by the enemy. American radar detection equipment, which picked up planes in the air and ships at sea, had greater range than the German. Japanese radar was greatly inferior.

Great emphasis was placed on airborne radar by the United States and British and the use of this device was a very important factor in the control of the submarine menace. Close personal supervision over this War Department program was exercised by the Secretary of War. Radar bombsights together with radio navigational aids permitted accurate bombing of German and Japanese targets under adverse weather conditions.

In the field of amphibious assault craft, the United States and Great Britain made great progress. This resulted from the fact that in every major campaign we waged in this war, we had to cross water and attack enemy-held positions. There was nothing anywhere which compared or even resembled our big landing ships with ramp prows and the dozens of other type craft which have put our armies ashore from North Africa to Okinawa. The initial development of these special types was stimulated by Lord Louis Mountbatten and the staff of the special British Commando forces under his direction.

Not only did the Nation's industrial establishment equip our Army, but it also contributed heavily to the hitting power of the other United Nations. The allocation of military lend-lease matériel to the Allied Powers exceeded a dollar value of 20 billions. A United States armored division can be fully equipped for 34 millions. The equipment of an infantry division represents a dollar expenditure of 10 millions. Translated into these terms, the dollar value of the arms alone turned over to our Allies would equip 588 armored divisions, or 2,000 infantry divisions.

To the British Empire went enough aircraft to equip four air forces the size of our Ninth as it went into action on D-day in Western Europe. At that time the Ninth was the largest air force in the world. American raw materials made possible a large percentage of Britain's own war production. But in addition fully fabricated equipment shipped to Britain in the last two years included 76,737 jeeps, 98,207 trucks, 12,431 tanks, and 1,031 pieces of heavy artillery.

The Soviet Union received thousands of tons of American raw materials to feed its own factories as well as fully fabricated equipment. In the two years covered by this report we shipped the Soviets 28,356 jeeps, 218,888 trucks, 4,177 tanks, and 252 pieces of heavy artillery. The mobility and supply of the great Red Army was further increased by American locomotives, rails, and rolling stock. Aircraft sufficient to

equip two air forces the size of the Ninth were sent to the Soviets.

Almost all of the equipment used by the revitalized French Army, which had 12 fully equipped divisions in action at the time of Germany's surrender, came from the United States. The French tactical air force which largely covered the operations of this army was also American-equipped.

The amount of aid that could be given to China was curtailed by the limitations of the air route over the high altitudes and storms of the Himalayan Mountains. The Chinese divisions and supporting troops which played a major part in the opening of the Stilwell road were American trained and equipped. The Chinese armies which successfully stopped the Japanese advance short of Chungking and Kunming had some American equipment. Total aid to China now exceeds \$500,000,000, and to this should be added the tremendous expenditures in war resources, planes, and facilities required in India and Burma in order to transport the material into China.

In return for lend-lease arms and materiel, United

States forces fighting over the world received reciprocal aid known as reverse lend-lease from those Allies in a position to give it. By the end of 1944 reciprocal aid had reached a dollar value of 4 billions. It consisted largely of housing facilities, base installations, and foodstuffs. During the period of the build-up for the European invasion, United States forces in the British Isles received the equivalent of one shipload of equipment, food, and matériel for every two shipped them from the United States.

Rations of our troops in the United Kingdom were supplemented by 436,000,000 pounds of foodstuffs, principally fresh fruits and vegetables, grown in Britain, and tea and cocoa and other products imported from the Empire. For our forces in the Pacific and Asia, Australia supplied 1,835,000,000 pounds of foodstuffs; New Zealand, 800,000,000 pounds; and India, 524,000,000. A large percentage of our base construction in Australia, New Zealand, and India was done under reverse lend-lease. From the British refineries at Abadan, in the Persian Gulf, our forces received 259,000,000 gallons of aviation fuel.

THE TROOPS

Manpower Balance

The process of mobilization for this war reached its peak and immediately started to decline with the surrender of Germany. In the summer of 1943 the firm decision was reached to build up the Army to an effective strength of 7,700,000 enlisted men believed necessary to meet our strategic commitments.

At the close of the European war the operating strength of the Army plus ineffectives was approximately 8,300,000. The ineffectives consisted of 500,000 men undergoing hospitalization, including 100,000 in the process of being discharged because they were no longer fit for either active or limited service, and 100,000 en route overseas as replacements, in all totaling approximately 600,000 men.

This spring, as it became evident that victory in Europe was close at hand, a new strength ceiling of 6,968,000 officers and men was set, based on the requirements of war in the Pacific only. It then became possible to proceed immediately with the demobilization of those individuals who were most entitled to discharge.

The technique for the mobilization of American manpower in this war was unique. The special nature of the war introduced many new factors. Perhaps greater than any other single advantage of the United Nations was the productive capacity of American industry. It was therefore necessary not to cut too deeply into the manpower of the Nation in the process of acquiring the men urgently needed by the Army and the Navy. We had the problems of arming both ourselves and the Allied Nations while, at the same time, we created huge armed forces necessary to the successful prosecution of the war. Furthermore, our lines of communication were to be extended entirely around the world, requiring large forces of men to work them and absorbing even larger forces in transit over the thousands of miles to and fro without profit to the military enterprise.

Fighting across the oceans, we needed a very powerful Navy and a large merchant fleet to transport and maintain our armies and to carry munitions to our Allies. At the same time, it was our purpose to exploit every possible scientific device and

technique to secure victory at the smallest cost in lives of our men. These various efforts demanded large numbers of men and women, and necessitated their allocation among the various programs with exceeding care, so that the right numbers of men would be doing the most important things at the most important time. The mere statement of this requirement fails to indicate the exceeding difficulty involved in its application to the special claims of each industry and the demands of each theater commander. To resolve the conflicting requirements posed a most difficult problem for a democracy at war.

It was estimated that the absolute ceiling on the number of American men physically fit for active war service lay between 15 and 16 million. The requirements of the naval and merchant shipping program had to be given a high order of priority. The Army decided to establish its strength ceiling at 7,700,000. Before we could bring the enemy to battle we had to secure our lines of communication and build our training and service installations. Within this total strength of the Army the minimum requirements of the Service Forces were set at 1,751,000. It was decided at the outset that the first offensive blows we could deliver upon the enemy would be through the air, and anticipated that the heavier and more effective our air assault, the sooner the enemy's capacity to resist would be destroyed. So the Air Forces were authorized to bring their strength to 2,340,000 men and were given the highest priority for the best qualified both physically and by educational and technical ability of the military manpower pool.

Each theater of operations had requirements for men over and above those allocated for its armies, air forces, and service installations. The troop basis allowed 423,000 men for these troops which would be directly attached to theater headquarters and major command installations throughout the world.

This left the Ground Forces with a maximum of 3,186,000 men within the limitations of the 7,700,000 effective troop strength. Yet when we entered the war it was almost impossible to compute accurately how many ground combat troops we would need to

win. The precise results to be attained by modern aerial warfare could only be an educated guess.

It was known that we would take our heaviest casualties both from gunfire and disease on the ground where men must fight on the most intimate terms with the enemy. We had to estimate accurately the strength and the quality of the ground forces with which the enemy nations could oppose us, and we also had to estimate with a reasonable degree of accuracy the forces the Allied Nations could put into the battle. From 7 December 1941, until after Stalingrad and El Alamein, it was almost impossible to forecast what would be the results of the seesawing ground battles raging in Eastern Europe and North Africa. In addition, the decisions as to the relative strength of our various combat arms were limited by the capacity of our training establishment, which was then in process of being expanded.

With all these unknown quantities, in early 1942 we established a troop basis of 3,600,000 men which would permit the organization of 71 divisions: 59 infantry (including 18 National Guard), 10 armored, and two cavalry. This force was the largest we then had the ability to train, equip, and provide a nucleus of trained officers and noncommissioned officers. In mid-1942, when the original build-up in the United Kingdom for the invasion of France and the North African operation began to take shape, we found we needed more and still more service troops. The demand was insatiable. The over-all strength of the Army by the end of the year had increased to 5,397,674 men. Throughout 1942, however, the planners were at work estimating the requirements for 1943 which we believed would carry the Army to its peak of mobilization and would give us the necessary strength to force a victorious decision. The projection was 8,248,000 officers and men. At first it was estimated this would provide the Army with 105 divisions. Later it became evident that the men for only 100 divisions could be found within this strength. By the middle of 1943 we determined that this projected mobilization might impose too great a strain on the Nation's manpower, if all of the ambitious efforts planned for the global war were to remain in balance. Fortunately for our dilemma, Stalingrad was now past history and the great Soviet armies were showing a steadily increasing offensive power. The ceiling was therefore reduced to 7,700,000 shortly after the TRIDENT Conference in Washington, the meeting at

which the over-all strategy became sufficiently firm to permit more precise planning. This amounted to a reduction of 548,000 men. The projected number of divisions was reduced to 90, including three special or "light" divisions that were being trained for jungle and mountain warfare. Later the 2d Cavalry Division, then in North Africa, was inactivated to provide urgently required service troops to support the amphibious landing in southern France. At the same time the Air Forces mobilization was fixed at 273 combat groups containing five very heavy bombardment (B-29's and 32's), 96 heavy bombardment (Flying Fortresses and Liberators), 26 medium bombardment, 8 light bombardment, 87 fighter, 27 troop carrier, and 24 reconnaissance groups.

On the face of it this appeared to be a critically small ground force for a nation as large as ours. Germany with a prewar population of 80,000,000 was mobilizing 313 divisions. Japan was putting 120 in the field; Italy 70; Hungary 23; Rumania 17; Bulgaria 18. Among the major Allies, the Soviets had a program for more than 550 divisions; the British for more than 50; the Chinese more than 300, though their divisional strength was often little more than regimental according to our method of computation. We were, however, second of the Allies in the mobilization of men and women for military service, third among all the belligerent nations. The Soviet war effort was putting 22,000,000 men and women into the fight. By the time of their defeat, the Germans had mobilized 17,000,000. Our peak mobilization for the military services was 14,000,000. The British Empire mobilized 12,000,000; China 6,000,000.

This war brought an estimated total of 93,000,000 men and women of the Axis and United Nations into the conflict. And fortunately for us the great weight of numbers was on the side of the United Nations. Total Allied mobilization exceeded 62,000,000; total enemy mobilization, 30,000,000. The figures show how heavily the United States was concentrating on aerial warfare, on the production and movement of arms for its own troops and those of its Allies, and the meaning in terms of manpower of waging war from 3,000 to 9,000 miles from our shores.

Our ground strength was, for the size of our population, proportionately much smaller than that of the other belligerents. On the other hand it was, in effect, greater than a simple comparison of figures

would indicate, for we had set up a system of training individual replacements that would maintain 89 divisions of ground troops and 273 combat air groups at full effective strength, enabling these units to continue in combat for protracted periods. In past wars it had been the accepted practice to organize as many divisions as manpower resources would permit, fight those divisions until casualties had reduced them to bare skeletons, then withdraw them from the line and rebuild them in a rear area. In 1918 the AEF was forced to reduce the strength of divisions and finally to disband newly arrived divisions in France in order to maintain the already limited strength of those engaged in battle. The system we adopted for this war involved a flow of individual replacements from training centers to the divisions so they would be constantly at full strength. The Air Forces established a similar flow to replace combat casualties and provide relief crews.

This system enabled us to pursue tremendous naval and shipping programs, the air bombardment programs and unprecedented, almost unbelievable, production and supply programs, and at the same time to gather the strength necessary to deliver the knock-out blows on the ground. There were other advantages. The more divisions an Army commander has under his control, the more supporting troops he must maintain and the greater are his traffic and supply problems. If his divisions are fewer in number but maintained at full strength, the power for attack continues while the logistical problems are greatly simplified.

When we had planned the size of the Army it had been impossible to foresee all of the ways in which the circumstances of waging three-dimensional war over the world would drain our manpower. It was clear that in this, as in all wars, men would fall victim to enemy action and disease; others would become ineffective because of sheer nervous and physical weariness that comes after long months of active participation in battle. But since the nature and technique of war, if not the fundamentals, are ever-changing, it is impossible to forecast casualties in one war from the experience of past ones. Both the intensity and the nature of our casualties have varied from month to month throughout this war, depending on the terrain and climate in which our forces were fighting and the quality of enemy resistance. Once an error was discovered it required months to

correct it because of the days and distances between the training camps in the United States and the battle fronts of the world. Yet the necessity of estimating approximately a year in advance the numbers of men that would be needed in the various elements of the Army and the total over-all strength required that both the casualty rates and the requirements for transportation, rest, and rehabilitation be forecast accurately.

Some of the forecasts were accurate; others were not. An exact forecast of the rate of ground force attrition had to be tied directly to the effectiveness of such factors as aerial bombardment, artillery, enemy morale, enemy fighting ability, and a myriad others that defied long-range calculation. As the war progressed we learned, by unceasing study of the experience we were gaining daily, what to expect in specific situations. But even here these calculations could never be made absolute. After the North African campaign, it seemed that we could reasonably expect heavy casualties in our armored units. So in preparation for the Sicilian operation we built up a sizable backlog of tank drivers and crewmen and at the same time geared the training program in the United States to this expectation.

But once ashore in Sicily our armor raced around the island against feeble opposition and received few casualties. Then we moved directly into the battle for Italy's jagged terrain, where armor was difficult to employ, and found ourselves with a surplus of armor personnel and a critical shortage of infantrymen for the job of clearing a clever and stubborn enemy out of positions ideal for defense.

The final manpower crisis occurred during the prolonged and very heavy fighting in the fall of 1944 and the winter of 1944-45, both in Europe and in the Philippines. However, our own tribulations of this nature were much less serious, it is believed, than those of our Allies and certainly of the German enemy, whose divisions at times were reduced below 5,000.

In the Siegfried Line fighting prior to the final advance to the Rhine, the weather was atrocious and most of the troops had been continuously engaged since the landing in Normandy in June. The lack of port facilities prior to the opening of Antwerp to Allied shipping made it impossible to maintain divisions in normal corps reserve and thus permit the rotation of units between the fighting line and comfortable billets in rear areas. Divisions for this purpose were available in England and in northwestern

France, but the state of the railroads and the flow of supplies made it impossible to maintain them at the front. All this resulted in a great strain on the fighting troops, and when a shortage in replacements was added, the situation grew very serious. It was just at this moment that the Germans launched their final offensive effort in the Ardennes.

This shortage in replacements at such a vital moment was the final effect of long-accumulating circumstances. The Army's manpower balance had been disturbed in the fall of 1943 by shortages in deliveries of inductees by the Selective Service System, which amounted during one 3-month period to about 100,000 men. A second factor was the miscalculation after North Africa that resulted in too many men being trained for the armored forces, the artillery and special troops, and too few by far for the infantry. Another factor was our failure in the early phases of the war to compensate in the over-all strength ceiling for the number of men who would be required to fill the long overseas pipelines and the time involved between the completion of the training of the individual in the United States and his final arrival in the division. Still another was the heavy pressure brought to bear on the War Department to hold down or reduce its demands for manpower. It will be recalled that for more than a year a rather vigorous attack was maintained against the War Department's estimates of manpower requirements. This limited our ability to get the men we needed when we needed them.

The Air Forces became involved in their own special type of imponderables. It was found that casualties suffered in the air had a serious reaction

on the fighting effectiveness unless they were replaced the same day. Vacant chairs at mess had an unexpectedly depressing effect on the survivors of heavy fighting. The strain of frequent missions produced an unanticipated degree of fatigue which required relief crews in addition to the normal complement. It was finally found necessary during the period of the Eighth Air Force's heaviest fighting and losses to provide three combat crews per operating plane and to return the men to the United States after 25 missions. In the Mediterranean where the losses at this time were much lighter, 50 missions could be flown before the strain demanded the relief of the crews.

For a considerable period in the southwest Pacific and in the Aleutian Islands, the Air Forces carried an almost intolerable burden of fighting and endurance. The climate, the isolation; the insufficiency of numbers in the face of Japanese opposition all combined to make necessary a heavy increase in replacements.

Another unknown factor was discovered in the tropical regions. It was found that the ground service crews had to work all night virtually every night in maintaining their planes, and were consequently exposed to the malarial mosquito during her most active hours. These men suffered so much from over-fatigue and the cumulative effect of heavy doses of atabrine that their replacement for recuperation became necessary long before the estimated period.

To implement the replacement system we had established the Ground and Service Force Replacement Training Centers.¹ It required more than a year to train the many elements of a new division because

Transportation Corps	Fort Francis E. Warren, Wyo.

of the difficulties of teaching men and units the teamwork so essential under the trying conditions of battle. But it was possible and practicable in a much shorter time to train an individual soldier so that he was competent to join a veteran team as a replacement where the battle experienced soldier can quickly fit him into the divisional structure. At the replacement training centers men were made ready to join the divisions and replace casualties in a concentrated training period of 17 weeks. At these training centers they were given six weeks of basic military training and intense physical conditioning. In the remaining period they acquired competence in handling the weapons with which they would fight or the equipment with which they would work and in learning the tactics of squads, platoons, companies, and battalions, the tactical units which actually engaged in combat.

An infantryman, for example, became proficient in his primary weapons and familiarized with the M1 rifle, the carbine, the hand grenade, the rifle grenade, the automatic rifle, the .30 caliber medium machine gun, the 60-mm mortar, and the two-man rocket launcher. These were the weapons that every infantry rifleman might be called upon to use. Not only were men taught to handle their weapons with proficiency in the replacement training centers, but they were taught to take care of themselves personally. There was intensive instruction in personal sanitation, malaria control, processing of contaminated water, cooking, and keeping dry in the open and all the other lore that a good soldier must understand. But most important, our replacements were taught the tricks of survival in battle. As the Army acquired battle veterans, both officers and enlisted men were returned to the United States for duty as instructors in the replacement training centers. These veterans, who learned how to survive in combat, passed on knowledge to new men and thereby increased both their effectiveness and their chances of survival in their first experience in combat. The training of replacements was made as realistic as possible to manage in training. Problems of street fighting, jungle fighting, and close combat were staged in realistic fashion with live ammunition, and men learned to crawl under supporting machine gun fire, to use grenades, and advance under live artillery barrages just as they must in battle. Although this training cost us a few casualties in this country, it is certain that for every casualty we took in this manner, we saved the lives of many men in battle.

After the completion of their replacement training, men received a furlough at home before reporting to oversea replacement depots where their long journey to the fighting fronts began. In the theaters of operations they again staged through replacement depots which were established in the rear of each army group, army, and corps. When division commanders needed new men to replace casualties, they called on corps replacement depots and the men moved forward to the line.

Where it was possible, the replacements were absorbed in the division in its inactive periods, or in regiments in reserve positions, and each new man was teamed up with a veteran so that he could learn to know his squadmates before he saw action. But when the battle was moving at a fast pace, replacements at times had to join units engaged with the enemy.

By the spring of 1944, as most of the shortcomings of the replacement system had become evident, the War Department took vigorous corrective action. A directive was sent to every theater requiring the establishment of retraining centers so that every man in the Army would be put to his most efficient use.

Since the early critical days of the mobilization, the Service Forces, the Ground Force training commands, and particularly the Air Forces had acquired great numbers of the best qualified of our men. The shortage of physically qualified men for infantry and artillery became apparent about midway in the activation of the new divisions. Later we started approaching the bottom of the manpower barrel, and it grew increasingly difficult to get men physically fit for combat out of the remaining civilian manpower pools. The only way in which the battle line could be kept firm was with suitable men already in the Army. To do this we speeded up the training program and stripped the divisions training in this country of nearly 90,000 infantrymen. At this same time the overseas divisions were returning increasing numbers of sick, wounded, and injured men to the hospitals as the intensity of the fighting developed and sickness took its toll. It was our purpose to fill up the service units with these hospitalized men who still could serve their country but no longer could endure the extreme hardships of the fox holes, and to send forward fresh men to take their place, after a necessary period of retraining.

In the United States we resolved to move out all physically fit men from the service and training commands and replace them with men who had been

wounded or weakened by disease and the hardships of the front, with men who had been overseas so long that they were entitled to return home under the rotation policy, and where possible with civilians.

To reduce the requirements for military personnel in the United States in order to send the maximum number of physically fit men overseas, expert personnel audit teams under the direction of the War Manpower Board headed by Major General Lorenzo D. Gasser were dispatched to every service and training command. General Gasser's teams achieved remarkable results.

Through the economies effected by the personnel audit teams and the policies established by the War Department Personnel Division, 143,000 combat-fit men in the Ground Forces training installations and units, such as anti-aircraft no longer necessary because of our air superiority, were placed in retraining for use as infantry. The Air Forces gave up another 65,000; the Service Forces 25,000. From the defense commands 12,000 men were extracted and at the same time the theaters produced 100,000 from their communication zones for the retraining program.

To assist General Eisenhower in combing out able-bodied men from his Communications Zone and replacing them with battle casualties, Lt. Gen. Ben Lear, who was then commanding the Army Ground Forces, was made Deputy Commander of the European Theater. This gave Eisenhower an outstanding general officer who would devote his entire attention to this critical readjustment of personnel.

To keep the over-all effective strength of the Army within the troop basis of 7,700,000, the call on Selective Service had been reduced from 160,000 a month in early 1944 to 60,000 in the fall. But when the replacement crisis reached its peak in the winter, there was no remaining alternative but again to call on Selective Service for more men. The call was increased to 80,000 in February of this year and 100,000 a month thereafter to the end of June.

No opportunity was overlooked to replace men with personnel of the Women's Army Corps, both in the United States and overseas. The WAC, now in its fourth year, presently has a strength of approximately 100,000, including 6,000 officers. Approximately 17,000 are on duty in the theaters. The Corps also contributed greatly to the critical shortage of hospital personnel by recruiting and training 100 general hospital companies to assist Army doctors and nurses in caring for the sick and wounded. Training of WAC personnel was con-

solidated at Fort Des Moines in July with the closing of the center at Fort Oglethorpe, Ga.

Early in 1944 the Army imposed restrictions on the movement overseas of combat replacements under the age of 19. It was the policy to send no man under this age to the battle lines so long as others were available. A few months later the policy was stiffened to prevent the use of men under 19 in infantry and armored units under any circumstances. By fall the Army had exhausted these resources, yet the need for men in General Eisenhower's armies continued to grow more pressing. The replacement training centers were filled largely with men who had been inducted when they reached the age of 18. It was a clear question of either relinquishing our momentum in the battles of Europe or using troops of this age. Certainly there is no military reason for not doing so. Men of 18, 19, and 20 make our finest soldiers. The excellent Marine divisions are made up largely of men of these age groups. They have stamina and recuperative power far beyond that of older men and this physical superiority often determines the issue in heavy and prolonged fighting. The only reason for not using 18-year olds in combat was the expressed preference of a great many Americans who felt there were moral reasons for not exposing men so young to the great risk of battle. The Army made every effort to accede to these views, but when it became a question of risking the victory or using men who could make it possible, there was no alternative. A new policy was then adopted to supersede the use of men under 19 in combat as soon as Germany surrendered and the terrific pressure on our available manpower was relieved. Congress in extending the Selective Service Act in May 1945 imposed a formal requirement, that 18-year-olds have at least a total of six months of training before they were sent into battle.

It is remarkable how exactly the mobilization plan fitted the requirements for victory. When Admiral Doenitz surrendered the German Government, every American division was in the operational theaters. All but two had seen action; one had the mission of securing the vital installations in the Hawaiian Islands; the other was an airborne division in SHAEF Reserve. To give General Eisenhower the impetus for final destruction of the German armies of the west, two divisions, already earmarked for future operations in the Pacific, the 86th and 97th, were halted on the West Coast in February, rushed across the United

States and onto fast ships for Europe. When these troops left the New York Port of Embarkation there were no combat divisions remaining in the United States. The formed military forces of the nation were completely committed overseas to bring about our victory in Europe and keep sufficient pressure on Japan so that she could not dig in and stave off final defeat.

The significance of these facts should be carefully

considered. Even with two-thirds of the German Army engaged by Russia, it took every man the Nation saw fit to mobilize to do our part of the job in Europe and at the same time keep the Japanese enemy under control in the Pacific. What would have been the result had the Red Army been defeated and the British Islands invaded, we can only guess. The possibility is rather terrifying.

Price of Victory

Even with our overwhelming concentration of air power and fire power, this war has been the most costly of any in which the Nation has been engaged. The victory in Europe alone cost us 772,626 battle casualties of which 160,045 are dead. The price of victory in the Pacific was 170,596 including 41,322 dead. Army battle deaths since 7 December 1941 were greater than the combined losses, Union and Confederate, of the Civil War. I present the following comparisons of the battle deaths we have suffered in all our wars so that there can be no misunderstanding of the enormous cost of this conflict, for which we were so completely unprepared:

	<i>Number of months duration</i>	<i>Total battle deaths</i>	<i>Average battle deaths per month</i>
American Revolution	80	4,044	50
War of 1812	30	1,877	62
Mexican War	20	1,721	86
Civil War (Union Losses)	48	110,070	2,293
Civil War (Confederate Losses) . .	48	74,524	1,552
Spanish-American	4	345	86
World War I	19	50,510	2,658
World War II		201,367	4,576

Army casualties in all theaters from 7 December 1941 until the end of the period of this report total 943,222, including 201,367 killed, 570,783 wounded, 114,205 prisoners, 56,867 missing; of the total wounded, prisoners, or missing more than 633,200 have returned to duty, or have been evacuated to the United States.

The great strategic bombardment strikes on Germany and the inauguration of the Mediterranean campaign pushed our total casualty rate above 5,000 a month in 1943. In the first five months of 1944 the increasing tempo of the air attack and the fighting in Italy drove our losses, killed, wounded, missing and prisoners, to 13,700 men a month. Once ashore in Western Europe, the casualty rate leaped to 48,000 a month and increased to 81,000 by December. The average for the last seven months of the year was 59,000.

Out in the Pacific the advance on Japan cost 3,200 men a month throughout 1944. In the first seven months of this year the rate increased to 12,750 as we closed on the Japanese Islands.

The heaviest losses have been on the ground where the fighting never ceases night or day. Disregarding their heavy losses to disease and exposure, the combat divisions have taken more than 81 percent of all our casualties. However, though the percentage of the total is small, the casualties among the combat air crews have been very severe. By the end of July the Army Air Forces had taken nearly 120,000 casualties. Of this total 36,698 had died. The air raids over enemy territory gave Air Force casualties the heaviest weighting of permanency. The wounded of the Ground Forces drove their total casualties high, but with the exceptional medical care the Army has had in this war, the wounded had good chances to recover.

The following break-down for the European Theater of Operations (which does not include Italy) demonstrates where our casualties were taken:

Assignment	Number of casualties	Percentage of casualties
Theater troops	1,094	1.18
Army group, army and corps troops	60,998	10.35
Infantry divisions	392,990	66.69
Armored divisions	62,417	10.60
Airborne divisions	22,008	3.73
Total combat divisions	477,415	81.02
Total field forces	539,507	91.55
<hr/>		
Troops under air commanders	1,699	.29
Strategic air forces	37,500	6.36
Tactical air forces	6,346	1.08
Total air forces	45,545	7.73
<hr/>		
Communications zone troops		
Grand total	589,269	

In the Army at large, the infantry comprises only 20.5 percent of total strength overseas, yet it has taken 70 percent of the total casualties. Enemy fire is no respecter of rank in this war; 10.2 percent of the casualties have been officers, a rate slightly higher than that for enlisted men.

The improvement of battle surgery and medical care, on the other hand, reduced the rate of death from wounds to less than one-half the rate in World War I, and permitted more than 58.8 percent of men wounded in this war to return to duty in the theaters of operations.

As staggering as our casualties have been, the enemy forces opposing us suffered many times more heavily; 1,592,600 Germans, Italians, and Japanese troops were killed for the 201,367 American soldiers who died. It is estimated that permanently disabled enemy total 303,700. We captured and disarmed 8,150,447 enemy troops.

The break-down of German and Italian losses against American, British, and French forces in the war in Europe follows:

	Battle dead	Permanently disabled	Captured	Total
Tunisia	19,600	19,000	130,000	168,600
Sicily	5,000	2,000	7,100	14,100
Italy	86,000	15,000	357,089	458,089
Western Front	263,000	49,000	7,614,794 ¹	7,926,794
Total	373,600	85,000	8,108,983 ¹	8,567,583

¹ Includes 3,404,949 disarmed enemy forces.

The break-down of Japanese losses in the Eastern battlefronts, including China, since Pearl Harbor is as follows:

	Battle dead	Permanently disabled	Captured	Total
Southern Pacific	684,000	69,000	19,806	772,806
Central Pacific	273,000	6,000	17,472	296,472
India-Burma	128,000	38,000	3,097	169,097
China	126,000	126,000	1,059	253,059
Alutians	8,000	1,000	30	9,030
Total	1,219,000	240,000	41,464	1,500,464

Constant efforts were made to ameliorate conditions under which American prisoners of war were held in Germany. The number of Americans taken prisoner by Germany and her satellites in the European war reached a final total of approximately 98,000. Until the final stages of administrative disintegration brought about by the success of our arms, it was possible to make our protests known and to secure some measure of relief for United States personnel in enemy hands. Nevertheless, Germany consistently failed to respect its obligations to provide a proper scale of food and clothing for Allied prisoners. When our forces overran prisoner camps, it was discovered that outrageous brutalities and atrocities had been inflicted upon Allied personnel. Every case is being investigated. The perpetrators will be punished.

Every effort was made to better the situation of American prisoners of war in Japanese hands but they produced only limited results. Though the United States did secure from the Japanese Government an agreement to accept the Geneva Prisoners of War Convention, to which Japan is not a party, in treatment of American prisoners and civilian internees, that Government failed to observe its obligations. With the cooperation of the Soviet Government there was inaugurated in 1944 a service for transmission of mail and some supplies to prisoners of war and civilian internees in the Far East. Funds were made available, to the maximum extent permitted by the Japanese Government, for prisoners of war and civilian internees in Japan proper, China, Manchuria, and the Netherlands East Indies. The Japanese did not agree to exchange sick and wounded prisoners of war, and our prisoners taken by the Japanese enemy were recovered only as a result of successful military operations. Nearly 16,000 Americans were taken prisoner in the fighting with Japan.

American troops who have been prisoners of the enemy are returned to the United States, with the highest priority next to that of sick and wounded, and high-point personnel of the forward combat units who are being returned for discharge. Rehabilitation treatment has been given them both overseas and in the United States. Sixty days temporary duty at home is granted each prisoner to permit him to rest and recuperate. Exprisoners from the Philippines have been promoted one grade since their release. Opportunity also is being given to all prisoners recovered in Europe to achieve the rank or grade which they presumably would have acquired but for the fact of capture. Many of these former prisoners of war are being discharged on the point system and other separation procedures.

The remarkable reduction in the percentage of deaths from battle wounds is one of the most direct and startling evidences of the great work of the Army medical service. In the last two years Army hospitals treated 9,000,000 patients; another 2,000,000 were treated in quarters and more than 80,000,000 cases passed through the dispensaries and received outpatient treatment. This tremendous task was accomplished by 45,000 Army doctors assisted by a like number of nurses and by more than one-half million enlisted men, including battalion-aid men, whose courage and devotion to duty under fire has been as great as that of the fighting men they assisted.

One of the great achievements of the Medical Department was the development of penicillin therapy which has already saved the lives of thousands. Two years ago penicillin, because of an extraordinarily complicated manufacturing process, was so scarce the small amounts available were priceless. Since then mass production techniques have been developed and the Army is now using 2,000,000 ampoules a month.

Despite the fact that United States troops lived and fought in some of the most disease-infested areas of the world, the death rate from nonbattle causes in the Army in the last two years was approximately that of the corresponding age group in civil life—about 3 per 1,000 per year. The greater exposure of troops was counterbalanced by the general immunization from such diseases as typhoid, typhus, cholera, tetanus, smallpox, and yellow fever, and, obviously, by the fact that men in the Army were selected for their physical fitness.

The comparison of the nonbattle death rate in this

and other wars is impressive. During the Mexican War, 10 percent of officers and enlisted men died each year of disease; the rate was reduced to 7.2 percent of Union troops in the Civil War; to 1.6 percent in the Spanish War and the Philippine Insurrection; to 1.3 percent in World War I; and to 0.6 percent of the troops in this war.

Insect-borne diseases had a great influence on the course of operations throughout military history. Our campaigns on the remote Pacific Islands would have been far more difficult than they were except for the most rigid sanitary discipline and the development of highly effective insecticides and repellents. The most powerful weapon against disease-bearing lice, mosquitoes, flies, fleas, and other insects was a new chemical compound commonly known as DDT. In December 1943 and early 1944, a serious typhus epidemic developed in Naples. The incidence had reached 50 cases a day. DDT dusting stations were set up and by March more than a million and a quarter persons had been processed through them. These measures and an extensive vaccination program brought the epidemic under control within a month. Shortly after the invasion of Saipan an epidemic of dengue fever developed among the troops. After extensive aerial spraying of DDT in mosquito-breeding areas, the number of new cases a day fell more than 80 percent in two weeks. The danger of scrub typhus in the Pacific Islands and in Burma and China was reduced measurably by the impregnation of clothing with dimethyl phthalate.

The treatment of battle neurosis progressed steadily so that between 40 and 60 percent of men who broke down in battle returned to combat and another 20 to 30 percent returned to limited duties. In the early stages of the War less than 10 percent of these men were reclaimed for any duty.

The development of methods of handling whole blood on the battlefield was a great contribution to battle surgery. Though very useful, plasma is not nearly as effective in combating shock and preparing wounded for surgery as whole blood. Blood banks were established in every theater and additional quantities were shipped by air from the United States, as a result of the contribution of thousands of patriotic Americans. An expendable refrigerator was developed to preserve blood in the advanced surgical stations for a period of usefulness of 21 days.

So that no casualty is discharged from the Army un-

til he has received full benefit of the finest hospital care this Nation can provide, the Medical Service has established a reconditioning program. Its purpose is to restore to fullest possible physical and mental health any soldier who has been wounded or fallen ill in the service of his country.

To insure that men are properly prepared for return to civilian life the Army established 25 special convalescent centers. At these centers men receive not only highly specialized medical treatment, but

have full opportunity to select any vocational training or recreational activity, or both, they may desire. Men, for example, who have been disabled by loss of arms or legs are fitted with artificial limbs and taught to use them skillfully in their former civilian occupation or any new one they may select. Extreme care is taken to insure that men suffering from mental and nervous disorders resulting from combat are not returned to civil life until they have been given every possible treatment and regained their psychological balance.

Beyond the Call of Duty

It is impossible for the Nation to compensate for the services of a fighting man. There is no pay scale that is high enough to buy the services of a single soldier during even a few minutes of the agony of combat, the physical miseries of the campaign, or of the extreme personal inconvenience of leaving his home to go out to the most unpleasant and dangerous spots on earth to serve his Nation. But so that our troops might know that the Nation realizes this simple truth, the Army made it a determined policy to decorate men promptly for arduous service and for acts of gallantry while they were fighting.

Exclusive of the Purple Heart, which a man receives when he is wounded, often right at the forward dressing station, the Army awarded 1,400,409 decorations for gallantry and meritorious service since we entered the war. The Nation's highest award, the Congressional Medal of Honor, was made to 239 men, more than 40 percent of whom died in their heroic service; 3,178 Distinguished Service Crosses have been awarded; 630 Distinguished Service Medals; 7,192 awards of the Legion of Merit; 52,831 Silver Stars; 103,762 Distinguished Flying Crosses; 8,592 Soldiers Medals; 189,309 Bronze Stars; and 1,034,676 Air Medals. Exclusive of the Air Medal and the Purple Heart, the Infantry received 34.5 percent of all decorations, the Air Corps 34.1 percent, the Field Artillery 10.7

percent, Medical Personnel 6.0 percent, and all other arms and services 14.7 percent.

The War Department has designated 34 specific campaigns during the course of this war. For participation in each of these campaigns a small star of bronze metal is authorized to be worn on the theater service ribbon, a star of silver metal to be worn in lieu of five bronze stars. A small bronze arrowhead is awarded for those who make combat parachute jumps or glider landings or who are in the assault wave of amphibious landings. For example, the men who fought with the 1st, 3d, and 9th Infantry Divisions from the invasion of North Africa to the defeat of Germany are entitled to wear the bronze assault arrowhead and eight bronze battle stars. In addition to the specific campaigns approved by the War Department, a theater commander may authorize additional bronze stars for antisubmarine, air, and ground combat participation not included within these campaigns.

Since my last report, two infantry badges and a medical badge have been authorized. The expert infantry badge was awarded to those who demonstrated proficiency in their specific duties after completion of training. The combat infantry badge was given to those who have shown outstanding skill as infantrymen in combat and the medical badge was presented to recognize the medical personnel who went into combat with infantry troops unarmed to serve the injured.

Battle participation stars had been awarded for the following campaigns up to the time of the Japanese surrender:

European-African-Middle Eastern Theater

Egypt-Libya	11 June 1942 to 12 February 1943
Air Offensive, Europe ..	4 July 1942 to 5 June 1944
Algeria-French Morocco ..	8 to 11 November 1942
Tunisia:	
Air	8 November 1942 to 13 May 1943
Ground	17 November 1942 to 13 May 1943
Sicily:	
Air	14 May to 17 August 1943
Ground	9 July to 17 August 1943
Naples-Foggia:	
Air	18 August 1943 to 21 January 1944
Ground	9 September 1943 to 21 January 1944
Rome-Arno	22 January to 9 September 1944
Normandy	6 June to 24 July 1944
Northern France	25 July to 14 September 1944
Southern France	15 August to 14 September 1944
North Apennines	10 September 1944 to 4 April 1945
Rhineland	15 September 1944 to 21 March 1945
Ardennes	16 December 1944 to 25 January 1945
Central Europe	22 March to 11 May 1945
Po Valley	5 April to 8 May 1945

Asiatic-Pacific Theater

Central Pacific	7 December 1941 to 6 December 1943
Burma	7 December 1941 to 26 May 1942
Philippine Islands	7 December 1941 to 10 May 1942
East Indies	1 January to 22 July 1942
India-Burma	2 April 1942 to 28 January 1945
Air Offensive, Japan	17 April 1942 (campaign not yet completed)
Aleutian Islands	3 June 1942 to 24 August 1943
China	4 July 1942 (campaign not yet completed)
Papua	23 July 1942 to 23 January 1943
Guadalcanal	7 August 1942 to 21 February 1943
New Guinea	24 January 1943 to 31 December 1944*
Northern Solomons	22 February 1943 to 21 November 1944*
Eastern Mandates:	
Air	7 December 1943 to 16 April 1944*
Ground	31 January to 14 June 1944*
Bismarck Archipelago	15 December 1943 to 27 November 1944*
Western Pacific:	
Air	17 April 1944 to (campaign not yet completed)
Ground	15 June 1944 to (campaign not yet completed)
Southern Philippines	17 October 1944 to 4 July 1945*
Luzon	9 January 1945 to 4 July 1945*
Central Burma	29 January 1945 to 15 July 1945
Ryukyus	26 March 1945 to 2 July 1945*

*Battle participation credit for the campaigns noted by asterisks may be awarded by the appropriate theater commander to units or individuals who actually engaged the enemy in the combat zone after the closing date.

Information and Recreation

In this war a very special effort was made to care for the minds of men in service as well as their bodies. This is continuing during the occupation and demobilization period. Millions of Americans have now been overseas in many parts of the world for several years. The conditions under which they lived during the war, the exposure to extreme danger, the monotony, the starvation for the comforts of living to which citizens of our Nation are accustomed placed heavy strains on their mental and nervous processes. From the beginning, the Army recognized that this strain must be counteracted by healthy informational and recreational activities.

At first, responsibility for both information and recreation was given to the Special Services Division of the Army Service Forces. Later, to permit greater

specialization, this section was relieved of its informational duties and the Information and Education Division was created.

The Special Services Division continues to establish policy and assist the theaters in establishing and operating recreational and entertainment programs. Each month it has shipped to the theaters, for example, more than 4,000,000 copies of books selected by the Council on Books in Wartime, and 10,000,000 magazines to keep troops supplied with reading material. In each theater a Special Service officer directs the distribution of motion pictures, athletic and other recreational equipment, the routing of entertainment groups selected by the United Service Organizations, and the activities of the Red Cross Military Welfare Services Program. In each unit other Special Service

officers are assigned to make the fullest use of all facilities offered by the theater command and improvise, wherever possible, additional recreational and entertainment programs.

During the past two years the theaters of operations have done outstanding jobs in organizing shows and athletic programs of their own with soldier talent to supplement that shipped from the United States.

The Information and Education program is designed to keep our troops abreast of developments in their own areas and throughout the world. This division publishes the magazine "Yank," and assists the overseas theaters in publishing their own daily and weekly newspapers. At the present time there are eight editions of the daily newspaper "Stars and Stripes" published in England, France, Germany, Italy, Africa, and Hawaii. In the Asiatic theater there is a weekly newspaper known as the "CBI Roundup," published at New Delhi.

For men still in hospitals who are separated from their units by reason of injury or illness, Information and Education Division also publishes the weekly journal "Outfit" devoted solely to bringing news of combat and service units to their absent members, who otherwise lost all touch with their organizations and suffered a feeling of abandonment or ingratitude. Fifty-five thousand copies of this magazine are distributed each week in 154 hospitals all over the world.

The Information and Education Division also conducts periodic surveys of how our troops are thinking—studies which the War Department utilizes in determining policies which affect troops individually. The point system of discharge was based directly on these expert surveys of soldier opinions.

It operates the Army News Service, an objective digest of United States press association and newspaper reports radioed over the world each day to supply news for Army newspapers and mimeographed or typewritten daily news sheets which are made available to troops by unit Information and Education officers. Information and Education also prepares and distributes radio programs for broadcast to troops throughout the world. During the great Campaign these programs were made available even in the most forward areas by mobile radio transmitters. This is the well-known Armed Forces Radio Service radio which carries a flavor of home to Americans from Germany to the islands of the far Pacific.

Through the Armed Forces Institute, which has

established 10 oversea branches, troops have an opportunity to improve their educational or technical background. Prior to the end of the war more than a million members of the Armed Forces had taken advantage of these correspondence courses, self-teaching materials, and off-duty classes.

The information program also includes the small pocket-sized soldier guides to the customs and languages of the countries where our men serve, the weekly news map series published world-wide, and educational posters covering a wide field of subjects from promotion of bond sales among the troops to malaria control. The division also distributes information films such as Colonel Frank Capra's "Why We Fight" series, a series known as "GI Movies" and the Army-Navy Screen Magazine. "GI Movies" is a compilation of existing commercial short subjects and those produced by the Army Pictorial Service, such as comedies, travelogues, and similar educational subjects. The Army-Navy Screen Magazine is a periodic compilation of newsreel and new short subjects of special interest to troops. It includes the "By Request" films. A group of men in New Guinea wanted to see pictures of a snowstorm. Soldiers all over the world asked for pictures of the Statute of Liberty. One enlisted man wanted to hear a quartet sing "Down By the Old Mill Stream." These and similar requests are met in the Army-Navy Screen Magazine.

The big job ahead for both Information and Education and Special Services is the provision of constructive activity for troops in Europe awaiting return to the United States, and serving in our occupation forces.

At the present time, there is in full swing in the European theater a tremendous program of education and recreation to make sure that American soldiers have healthy and profitable activities for their spare time in the months they must wait for shipping space to become available to return them to the United States for discharge.

Three extensive programs offering educational opportunities to all who would take advantage of them have been established. The broadest is the school program for men in the smaller units now operating in both the European and Mediterranean theaters. These schools are conducted on the battalion or regimental level. Prior to V-E Day theaters had been shipped sufficient text books by the Armed Forces Institute to get these schools promptly under way. The courses have been selected from the entire range of

secondary and vocational schooling, including subjects at the junior college level—algebra, elementary chemistry, history, languages, etc. Literacy training is also being provided. Individual soldiers may select any course of study they wish and pursue it in their own units while awaiting shipment home.

Opportunity for advanced study and technical refresher courses have also been provided. A centralized technical school has been established at Tidworth, England, with a capacity of 4,000 students for each two-month period. It opened in mid-August to troops and WAC personnel who wish to refresh their vocational skills prior to returning to their civilian jobs. Entrance qualifications require that applicants have three or more years of apprentice training in their craft. A university center has been established at Shrivenham, England, and another in France. These centers conduct a series of five 2-month courses at college level. Each has a capacity of 4,000 students per period. The qualifications for entrance in these courses are at least a high school education. Instruction is by Army personnel chosen for their civilian experience in education and these will be supplemented by eminent United States educators. Men who do not

want to enroll in any of the conducted courses will still have the opportunity to take correspondence courses.

Troops on occupational duty now have little leisure, but as Europe stabilizes they will find more and more opportunity for profitable work. It is anticipated that 1,250,000 men and women in the European theater will take advantage of this opportunity to improve their education.

At the same time the recreational programs will be carried on at full pace. An extra allocation of equipment was on hand in Europe the day of German surrender. Baseball, football, golf, swimming, tennis, and other equipment that Americans use in sport is available to the troops. Motion pictures are on hand everywhere since fighting ceased. Numerous post exchanges have been established throughout the occupation zone. The exchanges offer food and refreshment as they do in the United States and sales counters where soldiers can buy Swiss watches, French perfumes, and other authentic European goods at non-inflationary prices.

In the Pacific both the educational and recreational programs will be stepped up to meet the need of troops in occupation there.

Army Management

During the past two years the contributions to the war effort of three major commands and the War Department General Staff have been on a vast scale.

The Air Forces have developed in a remarkable manner. Young commanders and staff officers, catapulted into high rank by reason of the vast expansion, and then seasoned by wide experience, now give the Air arm the most effective form of military leadership—the vigorous direction of young men with the knowledge and judgment of veterans. Theoretical conceptions have been successfully demonstrated in action and modified or elaborated accordingly; new

conceptions are welcomed and quickly tested; the young pilots and combat crews daily carry out the dangerous and difficult missions with a minimum of losses and a maximum of destruction for the enemy. In personnel, in planes, technique, and leadership, the Army Air Forces of more than two million men have made an immense contribution to our victories. Through aggressive tactics and the concept of strategical precision bombing they have made these victories possible with a minimum of casualties.

The Army Ground Force Command performed the extremely difficult mission of organizing our

largest Army in an amazingly short time and at the same time training another 1,100,000 men to replace casualties. The Ground Forces headquarters has just completed a cycle in its operations. It began with the organization and training of the divisions, then deployment of the Ground Forces overseas and replacement of their casualties. Finally, in June of this year the Ground Forces began receiving the first of these divisions back under its control after the victory in Europe.

The tasks of the Army Service Forces have been difficult and complex beyond description. The efforts of this organization are only vaguely appreciated by the public, or even by the rank and file of the Army itself. The requirements for the support of the Army and the great oversea operations impinge frequently on conditions at home, giving rise to a succession of criticisms, largely unjustified in my opinion, since the critics seldom are aware of the salient facts and basic requirements. With thousands of miles of communications between the United States and the battlefronts, the necessity for reserve stocks here and abroad and the sudden rapid changes of requirements in various theaters have made it necessary for the Service Forces to be prepared for the unexpected. A minute change at the center of the circle usually results in miles of alterations along the circumference.

One consideration in particular is often ignored by the civilian in judging a condition which interferes or restricts with the daily life of America. The burden of supplying the fighting man at the place and at the time of his requirement rests squarely on a responsible officer. Excuses and explanations are not acceptable to the soldier and would not be tolerated by the political leaders, however inconsistent with the previous pressures on the home front which may have been in a measure responsible for the shortcomings.

The Service Forces have accomplished a prodigious task during the past two years in the supply of food, clothing, munitions, transportation, including the operation of a fleet of 1,537 ships; in the handling of pay and allowances amounting to 22.4 billion dollars; in the processing of approximately 75 billion dollars in contracts; in the management of 3,700 post or cantonment installations in continental United States; in the operation of great base port organizations centered in Boston, New York, Hampton Roads, New Orleans, Los Angeles, San Francisco, and Seattle, in handling 7,370,000 men and 101,750,000 measurement

tons of cargo; in the administration of the medical service which has treated 9,083,000 hospital cases and operated 791,000 hospital beds; in the direction of post exchanges now doing a monthly business of 90 million dollars and the organization and management of entertainment and educational opportunities; in the conduct of the administration of the Army and finally in the enormous tasks of redeployment and demobilization.

In the midst of handling this problem we have the constantly increasing pressure of families of the men for their release from the service. This has proved particularly vexatious in the case of high-point men on duty in the installations at home which must at this time bear the triple burden of supplying the requirements of the Pacific war, carrying out the regroupment and redeployment of troops in the United States, and accomplishing the demobilization of thousands of men daily. For the actual discharge of men, the required time for the preparation of papers, records, and accounts, and final payments has been reduced from approximately the 12 days of World War I to a minimum of 2 days, but even so the slightest increase over the minimum period produces a storm of protest. These reactions would ordinarily be accepted as normal to America but at this particular time they are bound to have a very disturbing effect on the morale of the forces overseas.

Almost as complex as the administrative management of these tremendous fighting forces has been the strategic direction of our global operations by the Joint Chiefs of Staff. Without the endless effort and the clear thinking of the officers in the various special groups or agencies attached directly to the Joint Chiefs of Staff to assist them in planning our operations and allocating our resources correctly, the great victories to which we are becoming accustomed would have been impossible.

I wish to make official acknowledgment of the support given me by the War Department General and Special Staffs, which has been beyond all praise in the understanding and handling of the countless problems of global warfare. Denied both public appreciation of their work and the desired opportunity for command in the field, these officers have made a great and selfless contribution to the war effort. The duration of the war has permitted a number of these officers to be given overseas assignments and at the same time, veterans of the fighting could be recalled to duty in the War Department.

No comment is necessary here to inform the

public of the leadership given the American Armies by the Commanders-in-Chief in the theaters of operations. Their work has been, in my opinion, well nigh faultless considering the hazards and unexpected developments of war on the vast scale in which it has been conducted. I am sure that in years to come our people will take constantly increasing pride in the splendid contribution of these officers to the prestige of America and the best interests of the world generally.

To the Members of Congress I wish to express my thanks for the complete support given the Army by their willingness to provide the huge sums of money and the necessary legislative authorizations requested by the War Department for the prosecution of the war.

During the past two years the Secretary of War has supported the Army with a courage and a singular integrity of purpose to a degree rarely evidenced in public officials.

I cherish a feeling of deepest gratitude for the confidence President Roosevelt gave me and for the stern resolution with which he met the critical periods of our operations. It might be considered an interesting historical fact to record that during the landing in Normandy he made no request at any time for information other than that furnished him as a matter of routine and that he did not put a single question to me or General Eisenhower during the critical moments of the Battle of the Bulge in the Ardennes. The confidence he gave to the management of the Army was a tremendous source of assurance to the officers of the War Department.

To my new Commander-in-Chief I am indebted for the strong support he gave immediately on assuming office to the efforts of the Army to bring the War in Europe and the Pacific to an early and successful conclusion.

Demobilization

The Army is now involved in the process of demobilizing the tremendous forces it gathered to win the victory. This requires the return of millions of troops to the United States and the processing of their discharge. It means the cessation of the munitions production which has absorbed most of our energies and resources during the last five years.

The demobilization, like the mobilization, affects every phase of national life. Until such time as the authorized governmental agencies determine the policy which will regulate demobilization, the War Department must proceed under existing legislation and policy to carry on this process in an orderly manner. The disturbance to our national economy must be kept to the minimum.

We hope during the twelve months immediately following the cessation of hostilities to have discharged

from the Army at least 5,000,000 men and officers. The determining factor throughout this period will be transportation. Soon thereafter, however, legislation must determine the strength of the Army for the immediate future.

The demobilization first got underway with the German surrender. It began simultaneously with the projected full scale redeployment for the final operations in the Pacific, which we had planned in the event the Japanese resisted to a suicidal end. In this period first priority on our available shipping had to go for the redeployment—the scheduled movement of men and materiel to the Pacific directly from Europe or via the United States.

The day Japan capitulated orders were issued from the War Department suspending the redeployment operation throughout the world. Theater commanders

were immediately directed to devote all facilities not required for the movement of occupational troops into Japan and elsewhere in the Far East to the demobilization.

The citizen Army had been recruited by selection of men on the basis of individual fitness for military duty and comparative essentiality in the Nation's economy. Accordingly, it was decided to discharge men individually rather than by units. An Army-wide survey was conducted to determine the consensus among the enlisted men as to the basis for determining discharge. The opinion was that those who have served longest, fought the hardest, and who have children should be permitted to leave the Army first. As a result the point system of returning men for discharge wherever they are on duty was established.

This system gives credit for length of Army service, overseas service, certain decorations, battle stars and not to exceed three dependent children under 18. The points are computed from 16 September 1940. Originally a minimum requirement of 85 points was established. Now the point system is revised to keep the demobilization steady and orderly.

The selection of soldiers eligible for discharge was made the responsibility of the various overseas commanders. As troops return they are sent to disposition centers near the embarkation ports and then move on in groups to Army stations near their homes. Here they receive a final screening and the separation center should usually be able to accomplish their discharge within 48 hours. In this final administrative procedure the soldier receives his mustering-out pay, his uniform, his discharge certificate, his lapel button, a separation record which summarizes his military service and qualifications, and his fare home. He also receives a pamphlet on veteran rights and benefits and advice regarding the agencies which can assist him in locating

a job. Nothing is overlooked which will help the returning veteran to help himself.

Soldiers whose health or fitness has been impaired in the service of the country will not be discharged until everything possible to modern medical science has been done for their rehabilitation.

The War Department has now projected its demobilization schedules as far as it can under existing legislation and policies. The next moves and the next objectives are political more than military. They require decisions on that level. The War Department can only submit recommendations and await further instructions.

Our present national policies require us to: Maintain occupation forces in Europe and the Pacific; prepare for a possible contribution of forces to a world security organization; maintain national security while the world remains unstable and later on a more permanent or stable basis.

These policies require manpower. Yet at the same time it is the policy of the nation to completely demobilize the wartime army as rapidly as possible. Unless hundreds of thousands of men of the wartime forces are to remain in service at home and overseas, more permanent decisions must be made.

The War Department recommends that the occupation forces and the U. S. complement in the International security force be composed as much as possible of volunteers. This can be accomplished by establishing now a new permanent basis for the regular military establishment. If this recommendation and those which I will now discuss in detail for establishing a peacetime security policy are now adopted by the Congress, demobilization can proceed uninterrupted until all men now in temporary service have returned to their homes.

FOR THE COMMON DEFENSE

To fulfill its responsibility for protecting this Nation against foreign enemies, the Army must project its planning beyond the immediate future. In this connection I feel that I have a duty, a responsibility, to present publicly at this time my conception, from a military point of view, of what is required to prevent another international catastrophe.

For years men have been concerned with individual security. Modern nations have given considerable study and effort to the establishment of social security systems for those unable or unwise enough to provide for themselves. But effective insurance against the disasters which have slaughtered millions of people and leveled their homes is long overdue.

We finish each bloody war with a feeling of acute revulsion against this savage form of human behavior, and yet on each occasion we confuse military preparedness with the causes of war and then drift almost deliberately into another catastrophe. This error of judgment was defined long ago by Washington. He proposed to endow this Nation at the outset with a policy which should have been a reasonable guarantee of our security for centuries. The cost of refusing his guidance is recorded in the sacrifice of life and in the accumulation of mountainous debts. We have continued impractical. We have ignored the hard realities of world affairs. We have been purely idealistic.

We must start, I think, with a correction of the tragic misunderstanding that a security policy is a war policy. War has been defined by a people who have thought a lot about it—the Germans. They have started most of the recent ones. The German soldier-philosopher Clausewitz described war as a special violent form of political action. Frederic of Prussia, who left Germany the belligerent legacy which has now destroyed her, viewed war as a device to enforce his will whether he was right or wrong. He held that with an invincible offensive military force he could win any political argument. This is the doctrine Hitler carried to the verge of complete success. It is the doctrine of Japan. It is a criminal doctrine, and like other forms of crime, it has cropped up again and again since man began to live with his neighbors in communities and nations. There has long been an effort to outlaw war for exactly the same reason that man has outlawed

murder. But the law prohibiting murder does not of itself prevent murder. It must be enforced. The enforcing power, however, must be maintained on a strictly democratic basis. There must not be a large standing army subject to the behest of a group of schemers. The citizen-soldier is the guarantee against such a misuse of power.

In order to establish an international system for preventing wars, peace-loving peoples of the world are demonstrating an eagerness to send their representatives to such conferences as those at Dumbarton Oaks and San Francisco with the fervent hope that they may find a practical solution. Yet, until it is proved that such a solution has been found to prevent wars, a rich nation which lays down its arms as we have done after every war in our history, will court disaster. The existence of the complex and fearful instruments of destruction now available make this a simple truth which is, in my opinion, undebatable.

So far as their ability to defend themselves and their institutions was concerned, the great democracies were sick nations when Hitler openly massed his forces to impose his will on the world. As sick as any was the United States of America. We had no field army. There were the bare skeletons of three and one-half divisions scattered in small pieces over the entire United States. It was impossible to train even these few combat troops as divisions because motor transportation and other facilities were lacking and funds for adequate maneuvers were not appropriated. The Air Forces consisted of a few partially equipped squadrons serving continental United States, Panama, Hawaii, and the Philippines; their planes were largely obsolescent and could hardly have survived a single day of modern aerial combat. We lacked modern arms and equipment. When President Roosevelt proclaimed, on 8 September 1939, that a limited emergency existed for the United States we were, in terms of available strength, not even a third-rate military power. Some collegians had been informing the world and evidently convincing the Japanese that the young men of America would refuse to fight in defense of their country.

The German armies swept over Europe at the very moment we sought to avoid war by assuring ourselves that there could be no war. The security of the United

States of America was saved by sea distances, by Allies, and by the errors of a prepared enemy. For probably the last time in the history of warfare those ocean distances were a vital factor in our defense. We may elect again to depend on others and the whim and error of potential enemies, but if we do we will be carrying the treasure and freedom of this great Nation in a paper bag.

Returning from France after the last war, with General Pershing, I participated in his endeavors to persuade the Nation to establish and maintain a sound defense policy. Had his recommendations been accepted, they might have saved this country the hundreds of billions of dollars and the more than a million casualties it has cost us again to restore the peace. We might even have been spared this present world tragedy. General Pershing was asked against whom do we prepare. Obviously that question could not be answered specifically until nearly 20 years later when Adolf Hitler led the replenished armies of defeated Germany back into world conflict. Even as late as 1940 I was asked very much the same question before a committee of Congress. Not even then could I say definitely exactly where we might have to fight, but I did recall that in past wars the United States forces had fought in Latin America, in France, in Belgium, in Germany, in Russia, in Siberia, in Africa, in the Philippines, and in China, but I did not anticipate that in the near future American soldiers would fight in the heart of Burma and in the islands of the vast Pacific, and would be garrisoning areas across the entire land and water masses of the earth. From this lesson there is no alternative but that this Nation must be prepared to defend its interest against any nation or combination of nations which might sometime feel powerful enough to attempt the settlement of political arguments or gain resources or territory by force of arms.

† Twice in recent history the factories and farms and people of the United States have foiled aggressor nations; conspirators against the peace would not give us a third opportunity.

Between Germany and America in 1914 and again in 1939 stood Great Britain and the USSR, France, Poland, and the other countries of Europe. Because the technique of destruction had not progressed to its present peak, these nations had to be eliminated and the Atlantic Ocean crossed by ships before our factories could be brought within the range of the enemy guns. At the close of the German war in Europe they were

just on the outer fringes of the range of fire from an enemy in Europe. Goering stated after his capture that it was a certainty the eastern American cities would have been under rocket bombardment had Germany remained undefeated for two more years. The first attacks would have started much sooner. The technique of war has brought the United States, its homes and factories into the front line of world conflict. They escaped destructive bombardment in the second World War. They would not in a third.

It no longer appears practical to continue what we once conceived as hemispheric defense as a satisfactory basis for our security. We are now concerned with the peace of the entire world. And the peace can only be maintained by the strong.

What then must we do to remain strong and still not bankrupt ourselves on military expenditures to maintain a prohibitively expensive professional army even if one could be recruited? President Washington answered that question in recommendations to the first Congress to convene under the United States Constitution. He proposed a program for the peacetime training of a citizen army. At that time the conception of a large professional Regular Army was considered dangerous to the liberties of the Nation. It is still so today. But the determining factor in solving this problem will inevitably be the relation between the maintenance of military power and the cost in annual appropriations. No system, even if actually adopted in the near future, can survive the political pressure to reduce the military budget if the costs are high—and professional armies are very costly.

There is now another disadvantage to a large professional standing army. Wars in the twentieth century are fought with the total resources, economic, scientific, and human of entire nations. Every specialized field of human knowledge is employed. Modern war requires the skills and knowledge of the individuals of a nation.

Obviously we cannot all put on uniforms and stand ready to repel invasion. The greatest energy in peacetime of any successful nation must be devoted to productive and gainful labor. But all Americans can, in the next generations, prepare themselves to serve their country in maintaining the peace or against the tragic hour when peace is broken, if such a misfortune again overtakes us. This is what is meant by *Universal Military Training*. It is not universal military *service*—the actual induction of men into the combatant forces.

Such forces would be composed during peacetime of volunteers. The trainees would be in separate organizations maintained for training purposes only. Once trained, young men would be freed from further connection with the Army unless they chose, as they now may, to enroll in the National Guard or an organized reserve unit, or to volunteer for service in the small professional army. When the Nation is in jeopardy they could be called, just as men are now called, by a committee of local neighbors, in an order of priority and under such conditions as directed at that time by the Congress.

The concept of universal military training is not founded, as some may believe, on the principle of a mass Army. The Army has been accused of rigidly holding to this doctrine in the face of modern developments. Nothing, I think, could be farther from the fact, as the record of the mobilization for this war demonstrates. Earlier in this report I explained how we had allocated manpower to exploit American technology. Out of our entire military mobilization of 14,000,000 men, the number of infantry troops was less than 1,500,000 Army and Marine.

The remainder of our armed forces, sea, air, and ground, was largely fighting a war of machinery. Counting those engaged in war production there were probably 75 to 80,000,000 Americans directly involved in prosecution of the war. To technological warfare we devoted 98 percent of our entire effort.

Nor is it proposed now to abandon this formula which has been so amazingly successful. The harnessing of the basic power of the universe will further spur our efforts to use brain for brawn in safeguarding the United States of America.

However, technology does not eliminate the need for men in war. The Air Forces, which were the highest developed technologically of any of our armed forces in this war, required millions of men to do their job. Every B-29 that winged over Japan was dependent on the efforts of 12 officers and 73 men in the immediate combat area alone.

The number of men that were involved in the delivery of the atomic bomb on Hiroshima was tremendous. First we had to have the base in the Marianas from which the plane took off. This first required preliminary operations across the vast Pacific, thousands of ships, millions of tons of supply, the heroic efforts of hundreds of thousands of men. Further, we needed the B-20's and their fighter escort

which gave us control of the air over Japan. This was the result of thousands of hours of training and preparation in the U. S., and the energies of hundreds of thousands of men.

The effective technology on the military structure is identical to its effect on the national economy. Just as the automobile replaced the horse and made work for millions of Americans, the atomic explosives will require the services of millions of men if we are compelled to employ them in fighting our battles.

This war has made it clear that the security of the Nation, when challenged by an armed enemy, requires the services of virtually all able-bodied male citizens within the effective military age group.

In war the Nation cannot depend on the numbers of men willing to volunteer for active service; nor can our security in peace.

In another national emergency, the existence of a substantial portion of the Nation's young manpower already trained or in process of training, would make it possible to fill out immediately the peacetime ranks of the Navy, the Regular Army, the National Guard, and the Organized Reserve. As a result our Armed Forces would be ready for almost immediate deployment to counter initial hostile moves, ready to prevent an enemy from gaining footholds from which he could launch destructive attacks against our industries and our homes. By this method we would establish, for the generations to come, a national military policy: (1) which is entirely within the financial capabilities of our peacetime economy and is absolutely democratic in its nature, and (2) which places the military world and therefore the political world on notice that this vast power, linked to our tremendous resources, wealth, and production, is immediately available. There can be no question that all the nations of the world will respect our views accordingly, creating at least a probability of peace on earth and of good will among men rather than disaster upon disaster in a tormented world where the very processes of civilization itself are constantly threatened.

The decision in this matter is so grave in consequences that it demands complete frankness on my part. Therefore I must say that many of the objections which have been made to Universal Military Training appear to be influenced by ulterior motives, or to ignore completely the tragedies of the past and present which we are seeking to avoid for the future. They often seem to give undue importance to restrictions on our

freedom of life, trivial in comparison with the awful tragedies we are seeking to avoid and the great blessings we hope to secure for succeeding generations.

The timing of our decision on the question of Universal Military Training is urgent. The officials of the State Department have been strongly of the opinion that a decision in this matter prior to the final peace negotiations would greatly strengthen the hand of the United States in securing acceptance of a genuine organization to handle international differences.

The terms of the final peace settlement will provide a basis for determining the strength of the regular or permanent postwar military forces of the United States, air, ground, and naval, but they cannot, in my opinion, alter the necessity for a system of Universal Military Training.

The yardstick by which the size of the permanent force must be measured is maximum security with minimum cost in men, materiel, and maintenance. So far as they can foresee world conditions a decade from now, War Department planners, who have taken every conceivable factor into consideration, believe that our position will be sound if we set up machinery which will permit the mobilization of an Army of 4,000,000 men within a period of 1 year following any international crisis resulting in a national emergency for the United States.

The Regular Army must be comprised largely of a strategic force, heavy in air power, partially deployed in the Pacific and the Caribbean ready to protect the Nation against a sudden hostile thrust and immediately available for emergency action wherever required. It is obvious that another war would start with a lightning attack to take us unaware. The pace of the attack would be at supersonic speeds of rocket weapons closely followed by a striking force which would seek to exploit the initial and critical advantage. We must be sufficiently prepared against such a threat to hold the enemy at a distance until we can rapidly mobilize our strength. The Regular Army, and the National Guard, must be prepared to meet such a crisis.

Another mission of the Regular Army is to provide the security garrisons for the outlying bases. We quickly lost the Philippines, Guam, and Wake Islands at the beginning of this war and are still expending lives and wealth in recovering them.

The third mission of the permanent Army is to furnish the overhead, the higher headquarters which must keep the machine and the plans up to date for

whatever national emergency we may face in the future. This overhead includes the War Department, the War College, the service schools, and the headquarters of the military areas into which continental United States is subdivided to facilitate decentralized command and coordination of the peacetime military machine. This was about all we had on the eve of this war, planners and a small number of men who had little to handle in practice but sound ideas on how to employ the wartime hosts that would be gathered in the storm. Had it not been for the time the British Empire and the Soviets bought us, those plans and ideas would have been of little use.

The fourth and probably the most important mission of the Regular Army is to provide the knowledge, the expert personnel, and the installations for training the citizen-soldier upon whom, in my view, the future peace of the world largely depends.

Of the citizen-Army, the National Guard is in the first category of importance. It must be healthy and strong, ready to take its place in the first line of defense in the first weeks of an emergency, and not dependent upon a year or more of training before it can be conditioned to take the field against a trained enemy. It is not feasible under the conditions of peace for the National Guard within itself to provide the basic, the fundamental training which is an imperative requirement for its mission. Therefore, in my opinion, based on a long and intimate experience with the Guard from 1907 until 1941, the essential requirement for such a system under modern conditions is Universal Military Training from which to draw the volunteers for the ranks of the Guard. Without such a firm foundation, I am clearly of the opinion that a sufficiently dependable force for our postwar needs cannot be maintained.

The second important component of the Citizen Army is the Organized Reserve through which full mobilization of the Nation's resources to war footing is accomplished. At the start of the present war, the Reserve was almost entirely an officer corps, the regimental and divisional groups lacking a practical basis for mobilization. The contribution of this component was therefore largely one of individuals, but of wide extent and great importance. The depleted officer ranks of the Regular Army were filled by the Reserve, the countless new staffs and organizations were mainly composed of Reserve officers, the great training camps for men inducted through the Selective Service System drew in the beginning on the officer strength of the

Reserve Corps. The Officer Candidate schools from which our present Army acquired its vital small unit leadership were staffed by Reserve officers. These officers were largely veterans of World War I and graduates of the Reserve Officers' Training Corps. Pitifully small appropriations had limited training to a brief period once in every 3 or 4 years and so few numbers of troops that the limited training the Reserve officers received had little relation to actual battle.

This lack of troops with which Reserve officers could acquire practical experience in command and staff work was the most critical limitation. There was no enlisted strength in the Reserve force. There was little connection and understanding between the Officers' Reserve Corps and the National Guard—which had an enlisted strength—and the number of enlisted men in the Regular Army was so small that it was impossible to qualify Reserve officers by training with Regulars. Especially in the dense centers of population there were few Regular troops. Yet here were located the largest groups of Reserve officers. Even had funds for transportation to the areas where Regular troops were stationed been available, and they were not, the few troops on the Regular roles would have been completely submerged under a deluge of Reserve officers. For example, the strength of the Officers' Reserve Corps in 1938 was more than double the number of Regular soldiers in combat units in the continental United States.

Only by universal military training can full vigor and life be instilled into the Reserve system. It creates a pool of well-trained men and officers from which the National Guard and the Organized Reserve can draw volunteers; it provides opportunities for the Guard and Reserve units to participate in corps and Army maneuvers, which are vital preparations to success in military campaigns. Without these trained men and officers, without such opportunities to develop skill through actual practice in realistic maneuvers, neither the Regular Army, the National Guard, nor the Reserve can hope to bring high efficiency to their vital missions.

Though ROTC graduates composed 12 percent of the war officers, its most important contribution was the immediate availability of its product. Just what we could have done in the first phases of our mobilization and training without these men I do not know. I do know that our plans would have had to be greatly curtailed and the cessation of hostilities on the European front would have been delayed accordingly. We

must enlarge and strengthen the system. It must be established on a higher level, comparable to the academic levels of college education in which the young men of the ROTC are engaged. All this is made easily possible if the student has participated in universal military training, and at the same time the length of the course can be shortened by 1 year. He would enter the ROTC as far advanced as his predecessors were after 2½ years of the original 3-years' course. He would have completed his elementary training—the military equivalent of his grammar school and high school courses—and would be prepared for college work, that is for training as an officer, a prospective leader of men. The product of such an ROTC would provide the National Guard and the Organized Reserve with an officer corps of exceptional character.

An unbroken period of 1 year's training appears essential to the success of a sound security plan based on the concept of a citizen army.

It is possible to train individual soldiers as replacements for veteran divisions and air groups as we now do in a comparatively short period of time. The training of the unit itself cannot be accomplished at best in less than a year; air units require even more time. The principle is identical to that of coaching a football team. A halfback can learn quickly how to run with the ball, but it takes time and much practice and long hours of team scrimmage before he is proficient at carrying the ball through an opposing team, utilizing the aid of the ten other men on the team. So it is with an army division or combat air group. Men learn to fire a rifle or machine gun quickly, but it takes long hours of scrimmage, which the army calls maneuver, before the firing of the rifle is coordinated with the activities of more than 14,000 other men on the team.

All men who might someday have to fight for their Nation must have this team training. The seasoned soldiers of our present superb divisions will have lived beyond the age of military usefulness. The situation will be similar in the peacetime army to that which obtained when we began to mobilize for this war and all men had to have at least a year of unit training before we had divisions even fit for shipment overseas.

The training program would be according to the standards which have made the American soldier in this war the equal of the finest fighting men. It would be kept abreast of technical developments and the resulting modifications of tactics.

Throughout the training a strenuous program of instruction would have to be followed, but it would not be possible in peace to carry on the work under the tremendous pressure we now follow in wartime. Athletics, recreational opportunities, short weekends, and other vacational opportunities such as at Christmas time, would, of course, be necessary. However, if the Government is to be justified in the expenditure of the funds involved, a vigorous schedule should be enforced; otherwise we would produce a half-baked product which would fail to command the respectful attention of the nations of the world, and therefore negate the primary purpose of the entire system.

To those who fear the Army might militarize our young men and indoctrinate them with dangerous conceptions, to those who express doubts of the Army's capacity to do the job, I submit the evidence of our present armies. The troops have been trained sufficiently to defeat a first-class enemy. Their minds have not been warped—quite the contrary. The American people are satisfied, I am confident, that their Armies are, in fact, armies of democracy. They know that the men composing those Armies are far better physically than they otherwise would have been, that their general health has been better than at home, except for those serving in the tropical jungles. The officers who trained our Armies were largely citizen-soldiers. They did have the initial guidance of Regular officers, but only 2 percent of the entire officer corps was professional. Only slightly more were of the National Guard; 25 percent were products of the Officers' Reserve Corps, 12 percent more were men commissioned direct from civil life because of certain professional qualifications. The great majority of the officers came up from the ranks, 59 percent of the total, which guaranteed the democracy of the Army.

To those who consider the introduction of a system of universal military training an imposition on democracy, I would reply that in my opinion it would be the most democratic expression of our national life. Whatever my limitations may be in judging this matter, I submit the evidence of the proposal of our first President.

Washington's program provided for universal training of all men arriving at the age of 17. The citizen-militia was to be divided into three classes, men from 17 to 21, known as the advance corps, men 21 to 46, known as the main corps, and men from 46 to 61, known as the reserve corps. All of the peacetime train-

ing would have been concentrated in the advance corps, but eventually all members of main and reserve corps would have been graduates of the training program. The militia bill was first introduced in the Third Session of the First Congress. It was considered in the House on 5 March 1792, and as finally enacted contained no element of any of Washington's recommendations. It was so emasculated when finally adopted that the representative who introduced the bill himself voted against its passage.

It appears probable that had the bill been approved by Congress, the United States might have avoided much of the war making that has filled its brief history. The impressment of American seamen would not have been regarded as a harmless pastime in the early 1800's, nor would the Kaiser have been so easily disposed to avenge the death of the Archduke Franz Ferdinand in 1914 with a world war, nor Adolf Hitler have been quite so quick to break the peace, if over these years the United States had been recognized by the war mongers as a Nation immediately to be reckoned with.

The peacetime army must not only be prepared for immediate mobilization of an effective war army, but it must have in reserve the weapons needed for the first months of the fighting and clear-cut plans for immediately producing the tremendous additional quantities of matériel necessary in total war. We must never again face a great national crisis with ammunition lacking to serve our guns, few guns to fire, and no decisive procedures for procuring vital arms in sufficient quantities.

The necessity for continuous research into the military ramifications of man's scientific advance is now clear to all and it should not be too difficult to obtain the necessary appropriations for this purpose during peacetime. There is, however, always much reluctance to expenditure of funds for improvement of war-making instruments, particularly where there is no peacetime usefulness in the product.

The development of combat airplanes is closely allied with development of civil aeronautics; the prototypes of many of our present transport planes and those soon to come were originally bombers. Many of the aeronautical principles that helped give this Nation the greatest air force in the world grew out of commercial development and our production know-how at the start of this war was partially the fruit of peacetime commercial enterprise. Since many vital types of weapons have no commercial counterpart, the peacetime develop-

ment of these weapons has been grossly neglected. Antiaircraft weapons are a good example. The highly efficient antiaircraft of today did not materialize until long after the fighting began. The consequent cost in time, life, and money of this failure to spend the necessary sums on such activity in peacetime has been appalling.

There is another phase of scientific research which I think has been somewhat ignored—the development of expeditious methods for the mass production of war matériel. This is of great importance since it determines how quickly we can mobilize our resources if war comes and how large and costly our reserve stocks of war matériel must be. Serious thought and planning along this line can save millions of tax dollars.

We can be certain that the next war, if there is one, will be even more total than this one. The nature of war is such that once it now begins it can end only as this one is ending, in the destruction of the vanquished, and it should be assumed that another reconversion from peace to war production will take place initially under enemy distant bombardment. Industrial mobilization plans must be founded on these assumptions and so organized that they will meet them and any other situation that may develop. Yet they must in no way retard or inhibit the course of peacetime production.

If this Nation is to remain great it must bear in mind now and in the future that war is not the choice of those who wish passionately for peace. It is the choice of those who are willing to resort to violence for political advantage. We can fortify ourselves against disaster, I am convinced, by the measures I have here outlined. In these protections we can face the future with a reasonable hope for the best and with quiet assurance that even though the worst may come, we are prepared for it.

As President Washington said in his message to Congress of 3 December 1793:

I cannot recommend to your notice measures for the fulfillment of our duties to the rest of the world, without again pressing upon you the necessity of placing ourselves in a position of complete defense, and of exacting from them the fulfillment of the duties towards us. The United States ought not to indulge a persuasion, that contrary to the order of human efforts, they will forever keep at a distance those painful appeals to arms, with which the history of every other nation abounds. There is a rank due to the United States among nations, which will be withheld, if not absolutely lost, by the reputation of weakness—if we desire to avoid insult we must be ready to repel it; if we desire to secure peace, one of the most powerful institutions of our rising prosperity, it must be known that we are at all times ready for war.
